—is concretely backed by a definite and successful endeavor to build up an organization insuring satisfaction to our customers—an organization each feature of which has been planned separately so that it will lend its maximum of significance to the term when used in connection with the business of Penrod, Jurden & McCowen, Inc. In short, it represents

All That the Word Implies,—

Scientific Drying Expert Manufacturing Good Timber
Modern Mills Satisfaction to the Buyer

Southern Rotary Veneers and Hardwood Lumber

We can take care of your requirements in Southern woods, no matter whether you are in the market for veneers or lumber. Our big Rotary Veneer Mill at Helena, Ark., has exceptionally large units, and can readily supply sizes which are ordinarily difficult to produce. Our lumber mills are cutting some of the finest hardwood stock ever manufactured in America. Tell us what you want—we can supply you.

On account of car shortage, which affects delivery of logs to the mills as well as shipments of veneer—we urge all buyers of veneers to place requirements at least 60 to 90 days in advance

Michigan Hardwoods *Cadillac Quality*

Nature has been generous in supplying
Cadillac an abundant supply of superior timber
and we are supplementing her work with the
best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and
seasoned, grades that are reliable and not
blended to meet price competition, punctual
service; — these are the elements of Cadillac
Quality.

We sell direct to responsible dealers and
manufacturers.

AMERICAN LBR. & MFG. CO., Pittsburgh,

Manufacturer and Wholesaler PENNSYLVANIA

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Box Lumber Supplies from Memphis District

It is generally understood that the lumber required by the manufacturers of shipping boxes and other containers, including crates, is not of the highest class. It is what remains after the best grades have been culled out for other uses. But this does not lessen the importance of box lumber. It fills a place which could not be filled much better by the highest grades, which would generally cost two or three times as much.

The Memphis district, which includes the surrounding states which find Memphis a market center from which to make sales, is highly important as a source of supply for box material, both as lumber and as veneer. It is not practicable to determine from available data just how much of such material is made into boxes within the Memphis district or shipped to surrounding regions to be so manufactured; but the quantity exceeds one billion feet a year. That is approximately one-fourth of all the boxes made in the United States.

Memphis is favorably situated as a source for this enormous supply of box lumber. It is within reach of the large vegetable and small fruit districts of the South, and likewise within shipping distance of the fruit and truck orchards and gardens of the entire Ohio valley. In addition to that, the manufacturing cities as far away as Chicago, St. Louis, Kansas City, Indianapolis, Cincinnati, and even Pittsburgh, are within reach and draw some of their box material from the Memphis region.

Excellent railroad and river shipping facilities make this wide distribution possible. The large shippers of lumber, acting through their boards of trade and other associations, watch shipping tariffs carefully and see to it that rates are adjusted in the most favorable way. This policy has borne results which are apparent in the figures which show a billion feet of Memphis box lumber going into use annually, and some of it in keen competition with box lumber from other producing regions.

DIMENSION STOCK

Mahogany and Walnut

Aside from our production of lumber and veneers—
We are manufacturing kiln-dried mahogany and walnut
dimension stock at the rate of 1,500,000 feet annually,
and this department has been steadily growing since
1902. We think that these simple facts make detailed
argument unnecessary—as to our prices, quality of our
stock, and promptness of service.

However, we have ready for mailing a circular which
explains in detail how and why you can save time,
money and trouble—through our dimension stock.

But if you don't care for the circular, and if you realize
what an expensive luxury your waste pile is, send us
your cutting bills, as you would give them to your
stock-cutters. We will quote a specific price for each
style you manufacture.

C. C. Mengel & Brother Co.

AMERICAN FOREST TREES

"Written in the Lumberman's Language"

¶ It tells all there is to know about every commercial tree in the United States, and

¶ You can rely absolutely upon its technical correctness in every detail.

¶ We have left a few hundred copies of this beautifully bound edition after a very satisfactory sale and

¶ Can make quick shipment on ten days' trial upon receipt of your order.

Price, prepaid, six dollars.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Review and Outlook

General Market Conditions

ALARMING REPORTS of growing restrictions in woods and sawmill labor make definite predictions of curtailed winter cut possible. The Southern labor field is being affected in addition to the causes that are affecting other industries by the vast demand from the cotton interests and by the continued exodus of negroes to northern points. It was thought for a time that the movement of black labor north had been checked, but seemingly their characteristic impulse to "follow the leader" and their seeming ardor to get into new fields is undiminished. The result is that the millmen in the South are reporting greater and greater difficulty in cutting and moving their logs and in handling their sawmill work. This, coming now with ideal logging conditions at hand and the entire probability that in a few short weeks the wet winter season will have covered the southern forests, makes the prospect extremely dubious. As a matter of fact, even though some of the mills had begun to accumulate quite sizeable piles of logs on mill yards, these did not reach anywhere near the proportions desired before increasing difficulties began to be experienced. The problem before the southern operators is a very serious one and is already resulting in short-time runs with the prospect of many plants being completely shut down.

The same conditions, possibly in a less aggravated form, hold in the North, where it is suggested that the cut will at least approach normal but will not by any possible chance go beyond the normal volume.

A suggestion of that character is really serious in itself as a production lessened below the actual demands, and especially at this time when the government is requiring such vast quantities of all kinds of lumber, is especially undesirable. Of course it has the saving feature in that the absolute certainty of under-production will entirely overcome any weak-kneed tendency to sacrifice lumber at less than production cost. A few weeks ago the trade began to show occasional symptoms of cold feet on the price question, but the difficulty of consignment shipments in itself has been a potent factor in checking any such action. With the growing realization of the serious situation confronting producers, the lumber trade is holding tight to its confidence and lumber is going to hold what it has gained and probably incline still further.

As far as normal lumber consumption is concerned, the situation is too well defined to need extensive comment. There is growing evidence that one of the big reasons why the factories are not buying more lumber is, as previously stated here, the uncertainty of labor at the manufacturing centers. There is no question as to the amount of money available in the country, although subscrip-

tions for government needs will, of course, take out of normal circles a very large quantity that might normally go for other purposes. It is merely a question of time, though, when this will get back into regular channels again, at least the vast bulk of it, and the buying power of the people as a whole will thus, of course, remain unimpaired. It is obvious that the vast government expenditures will be made on the basis of credit rather than of actual handing of cash from government hands into the hands of those supplying its needs. Thus the return of money used for war purposes to general circles will probably be rapid. However, it is safe to count upon largely restricted demand for the things which people normally buy freely with their spare money.

Even in spite of this, the furniture factories in most parts of the country are reporting that they have orders for about all the stuff they can put out. Yet, they are undeniably further restricting their purchases of raw material, the reasons, as stated, being uncertainty of having sufficient labor to use up any great quantities and also uncertainty as to future market for the stuff they are going to buy.

The Washington situation seems to be getting straightened out in better shape each week, and the work will progress with more rapidity as the working forces are more accustomed to the new duties. One of the evident results is the speeding up in orders and requisitions and requests for bids on many articles that have not been given general publicity. In fact, it is becoming more and more evident that the lumber trade in common with other industries must make war production the paramount consideration, and that it will find in Uncle Sam a market more than sufficient to take care of the deficiencies in other fields.

Nothing more encouraging is heard from lumber export circles, nor from the building trades, nor can anything more hopeful be anticipated in these directions. The present state of affairs also as it applies to the factory trade in general can be expected to continue until the factory buyers as a whole realize growing shortages in fall and winter production of hardwoods. The importance of the manufacture of containers cannot be too strongly emphasized. As a bulk of government goods will be sent across strong containers are in order and wood is essential. Millions and millions of feet of crating and box lumber will be required.

What has been said here is of necessity more or less of a repetition of what has been said before in previous issues, but the conditions warrant repetition and are here outlined again with added emphasis as they are showing more definite alignment. The net of the whole thing is that lumber is still good property and will be even better property before the winter is over.

Uniform Handling of Freight Tax Desirable

SINCE THE IMPOSITION by the government of the three per cent tax on all freight bills there has been considerable discussion as to who would be directly responsible for its payment. It is quite obviously good policy to establish uniform practice in this regard and an equally good idea to have such practice defined before the law goes into effect on November first. To this end the lumber industry should take advantage of every gathering in the near future to give this important point discussion. Some recommendation from a national body would undoubtedly be extremely helpful to the end that both the shipper and the purchaser may be saved annoyance and possible controversy to as full an extent as possible.

The question has undoubtedly been considered carefully by most individual shippers, but the point is that the practice decided upon must be the same in all cases or endless trouble and confusion will result.

It does not appear that there should be any great difficulty in coming to an understanding. The law clearly states that the tax shall be paid by the party to the transaction paying for the freight service rendered. This would not seem to give with the announced intention of the southern shipper to sell goods "freight allowed to Chicago." This clearly puts the shipper in the position of paying for the freight service and requires that he also pay the tax. On the other hand, it does meet with the plan of one northern shipper who will pay the tax on all f. o. b. mill shipments and let the buyer pay on all f. o. b. point of destination shipments. It is because uncertainty is already apparent that the final solution should be arrived at as early as possible.

Hardwood Prospects Abroad

THE DEPARTMENT OF COMMERCE HAS ANNOUNCED that the four American lumber commissioners, Messrs. Simmons, Brown, Walker and Oxholm, have reached their destinations where they will begin their investigation of markets for American lumber. Mr. Simmons is in Russia, Oxholm in Norway, Walker in England, and Brown in Spain.

It has taken about two years to find the commissioners and get them at their respective posts ready to begin work. It is now proper to discuss just in what way the hardwood lumberman may expect to profit from the work of these investigators. It may be taken for granted that the bulk of the gain, if there is to be any gain, will go to the softwood lumbermen, particularly to the Douglas fir and yellow pine interests; but the hardwood men ought to get something out of it, too.

Of the four hundred kinds of American hardwoods, scarcely more than a dozen have any earthly show of selling abroad in anything like paying quantities, and only about half of that dozen woods will amount to much in any foreign trade that we may expect. The lucky half dozen will probably be black walnut, oak, red gum, ash, yellow poplar and maple.

Walnut will compete with the European and Circassian walnut; but the old countries are about stripped of these, and if anybody over there wants walnut, he must take our black walnut or nothing. Therefore, the chance of increasing the sales of our walnut appears good.

Our oak must compete abroad with high-class European and Japanese oak. It is as good as they, but we can hardly claim that it is better. It cannot keep Japanese oak out of our own Pacific coast states, and there has always been some English and Austrian oak sold in our eastern states. When our oak competes with European oak in Europe, and Japanese oak also, it will have a fight if it gains much. Its chance, whatever chance it has, will depend upon capturing the markets before the old world oak lumbermen get on their feet again after the war. For that reason it is hoped that our commissioners abroad will drive the entering wedges quickly and firmly.

Our red gum should have a relatively easy road. It has no competition of importance over there. Walnut was formerly a competitor, but it can hardly be so any more. The chance of increasing our exports of gum seems promising.

Ash will have to compete with European ash, but it has been able to do that during the past two hundred years, and it should have no trouble in doing it now. Native ash must be pretty scarce in Europe by this time.

Yellow poplar has no direct competitor in Europe or anywhere else; but it is not indispensable. The European linden, which corresponds to our basswood, is the closest competitor, but it is not so desirable for fine panel work as yellow poplar. Our poplar ought to sell well over the sea, as it has always done.

Possibly our maple will have the largest sales in the form of flooring; but it will not have the field all to itself. There is maple in Europe, and there are also several other woods which make good floors.

Our hickory has no competitor there for certain uses, but for others it must meet keen competition, and it can scarcely be expected to show largely increased sales.

We have several other woods which have gone to Europe in the past and for some of them there is a chance of increasing the sales. Europe has so much birch and beech that ours cannot gain much ground. The same holds true of elm. Locust that makes excellent treenails must compete in Europe with satisfactory woods from Australia; besides, it is doubtful if we shall have much locust left when we have built our own wooden ships. Dogwood and persimmon for shuttles, and red cedar for lead pencils will likely hold about the trade they enjoyed before the war. At least, no likelihood of greatly increasing their sales is now apparent.

Segregation of Costs

OPERATORS SHOULD ENDEAVOR to get actual costs in each department of their logging and milling operations in order that totals may be dependable, and may supply valuable data by which to compare present with past operations, and present with future figures in years to come. To attain that object, the cost sheets should show, separately, the actual cost of cutting, of hauling, and of delivering the logs at the plant. To this could be added the cost of manufacture, of sales, and of the overhead; and from these items the profit on the whole transaction can be figured and the whole system should so far as possible cover each wood separately.

It is true that one man's cost may not always be compared with another's, on a similar basis; but the man who knows accurately his own cost has a basis on which to work. The situation of oak is a case to the point. The present price of that wood seems entirely too low, when compared with other timbers. It costs as much as they to log, to manufacture, and the standing timber shows the same increase in price as they. Yet no one hears serious complaint on the subject from the operators. Is it because they fear that competition is threatening the volume of their business, or because they cannot see the true situation? If this is the case, what would it mean if oak slumped five dollars a thousand? How will that slump compare with a similar slump in gum, birch, maple, or ash whose present prices are relatively higher than oak's? When this view of the matter is taken, it brings out the necessity of accurate and complete figures on costs so that each item can be examined separately.

We usually think of mahogany either in the form of standard lumber or veneer, but a lot of mahogany is marketed in the form of dimension stock, and likewise it is quite an item in the dimension stock business.

Some of the mill yard surroundings were made to look like farm yards this year, and we may add in passing that the gardening spirit is a good thing to keep alive and working every year.

While lumber has advanced some in price, a bushel of wheat or of corn will buy considerably more lumber now than it would three years ago.

Lumber News from Washington

Good Prospect for Centralized Government Purchases

The lumber purchase and building construction work of the War Department, it is reported, has been centered in the division of which Brigadier General I. W. Littell, the quartermaster officer who had charge of constructing the army cantonment, is chief. This action reported to have been taken by Secretary of War Baker is approved generally by lumber manufacturers who have been busy here on war work for some time, because it is believed it will result in simplifying the method for lumbermen to deal with the War Department.

It would stop the practice, it is said, of army purchasing officers in various branches of the service buying lumber in competition with each other, which has resulted in very high prices being paid by the government in some cases. It would consolidate under one head building operations that have been distributed among the quartermaster department, which erected the cantonments and army camps; the signal corps, which has been building aviation schools, camps, fields and storehouses in many parts of the country; the ordnance bureau, which has been doing some building in connection with the artillery branch of the service, and the engineer corps, which is concerned in the construction of fortifications, storehouses, certain wharves, etc., in this country, as well as military construction work with the United States army in France. The last class of work, it is thought, however, may be left with the engineer corps.

The reorganization of the army construction bureau has been marked by the departure of Major Hamilton of the reserve corps, who had charge of certain lumber purchases for cantonment construction under Gen. (then Col.) Littell. Major Hamilton favored large lumber purchases of local lumbermen on the open market instead of buying direct from the manufacturers through the committee on lumber, and he frequently clashed with members of that committee and other lumbermen. Major Hamilton is reported to have become purchasing officer for the American International Shipbuilding Corporation, which is to make fabricated steel ships for the government.

Gen. Littell is a strong believer in doing business through the lumber committee and the lumber trade emergency bureaus, and some of the latter, which have not had much government business, hope to receive better treatment from him than they have had from some of the other purchasing officers of the government. It is thought, for instance, in some quarters that there is room for building up a big government business with hardwood emergency bureaus. Some hardwood lumbermen feel quite badly because they say their organization has been discriminated against by the shipping board, which on the other hand refuses to buy pine and fir ship stock except from emergency bureaus representing these trades.

There would be still more opportunity for the trade bureaus to do business systematically with the government if all the government emergency construction work were centralized under Gen. Littell and if all the government purchases of lumber were centralized under one purchasing agency. However, it is doubted if the former of these contingencies will occur, and certain government departments never have gotten into the joint purchasing scheme.

The Navy Department is one of these, but there are reports that it soon will be working in full accord with the joint purchasing agency of the war industries board, Council of National Defense. Recently confusion was created by the Navy Department going upon the market for some 20,000,000 feet of lumber and timber, hardwood and softwood, much of it like that commandeered by the Emergency Fleet Corporation for wooden shipbuilding. This apparent conflict, it is understood, is being smoothed out by government officers with the assistance and co-operation of the Council of National Defense and the lumbermen. The understanding is that whichever branch of the service needs the stuff most will get it first.

The priority committee of the war industries board, Council of National Defense, has been created for that purpose, and Mr. Demsey of the Long Bell Lumber Company, secretary of the committee, will try to see that everybody gets a square deal. The navy wants the

stuff it is now on the market for, it is reported, to lay aside in navy yards for use as required later. The shipping board has emergency need for ship stock immediately. The navy proposition, it is said, is not good policy any more than was the plan proposed in the War Department to establish a big government storage yard at Mobile, Ala., to stack up quantities of timber for possible use in France at an indefinitely later date.

Several of the lumber trade emergency bureaus have proposed reduced prices for cantonment stock for the month October 11 to November 10. There has been an average reduction of 1.25 per 1,000 feet on lumber furnished by the Southern Pine Bureau for this purpose, and it is reported that that price has been met by certain other bureaus, although some have refused to meet it. The reduced prices are understood to have been approved by the lumber committee and the War Department. Reductions on some items have been as much as \$4 or \$5 per 1,000 feet. The general rule is to follow the commercial market.

Wood Indispensable to Government

Wood as a construction material has been approved by the government not only in the case of the cantonments—it has ordered nearly 10,000,000 feet of lumber for the construction of a big frame structure at Washington to accommodate the army bureaus that have been squeezed out of the War Department building. The building will have 1,000,000 feet of floor space, it is understood. The government is also building here of wood buildings for the Council of National Defense and other branches of the war service.

It is reported that the sixteen national guard camps are to be increased to the full size of the national army cantonments. If so, there will be orders for fifteen or twenty million more feet for each camp.

The Douglas Fir Emergency Bureau reports having received orders for nearly 500,000,000 feet of lumber for wooden ships, cantonments, Hog Island, etc., including 41,000,000 feet of Douglas fir airplane stock for several of the anti-German governments, at \$55 per 1,000 feet f. o. b. mill, and 117,000,000 feet of spruce aircraft stock, for the American and other allied governments.

The hardwood and hemlock bureaus are said to have received orders for about 75,000,000 feet of lumber from the government for war purposes, the Southern Pine Bureau for perhaps 325,000,000, the North Carolina bureau for over 200,000,000 feet and the Georgia-Florida bureau for a large quantity.

Buying Hardwood Schedules Below Maximum Figures

Hardwood ship schedules for the vessels that are being built for the United States Shipping Board, it is reported, have been ordered of various lumbermen at prices ranging from \$68 to \$86 per 1000 feet. The shipping board, through the Emergency Fleet Corporation, is understood to have fixed a maximum price of \$90 per 1000 feet it would pay for hardwood ship schedules. This was after the Southern Hardwood Emergency Bureau did not reduce its price on hardwood ship schedules below \$100 per 1000 feet for all except one stick, which was quoted on the basis of \$150 per 1000 feet, which prices were agreed upon by the committee representing the hardwood emergency bureau and were deemed reasonable by the lumber committee, Council of National Defense.

Having fixed the maximum price of \$90 per 1000 feet for hardwood schedules, the fleet corporation, it is said, has never had to pay that much. Whether it will be proposed later that the prices now agreed upon between the corporation and many hardwood hewers, wholesale and retail dealers, small mills and other individual concerns with whom it has placed orders for hardwood ship schedules, be increased as was done in the case of yellow pine ship schedules is not known.

F. K. Paxton, assistant purchasing agent of the fleet corporation, says that there is no change in the policy that has been adopted of purchasing hardwood schedules from individual concerns instead of from the Southern Hardwood Emergency Bureau. However, the

latter received some orders for hardwood ship schedules before the policy was adopted of placing orders elsewhere.

The developments of interest to the hardwood industry in connection with the wooden shipbuilding program are the report that a lot of oak ditch timber may be ordered to be used instead of yellow pine ditches in some instances, and that osage orange has been tested to determine its suitability for the manufacture of treenails for use in building wooden ships. It is said that osage orange has been found satisfactory, and the present understanding in hardwood lumber circles is that it may be used for treenails as well as locust, oak and eucalyptus, heretofore specified for that purpose.

Hardwoods Not Affected by Commandeer Order

The second commandeering order of the shipping board did not hit hardwood any more than the first order of this kind. The second one merely modifies the first commandeering order with reference to yellow pine timbers, so that it will not apply to car sills, some other car stock, certain bridge timbers and other materials not needed by the shipping board in such quantities as they are available. The modification also excludes certain lumber and timber over 30 feet long, absolutely all of which was commandeered under the first order.

Lumbermen say that the new order will ease up on many mills which are loaded up with some of the smaller stuff that the shipping board previously commandeered. It will relieve the demand for some of this material in the market and enable mills cutting ship schedules to unload some of the stuff they have on hand. The modification was recommended by prominent lumbermen and by railroad men who thought that the building of cars might be stopped under the first order.

The modification does not go so far as to permit free shipment of the larger timbers actually needed by the shipping board, but which are not up to that body's standard of specifications as to grade, etc., but it is expected that the shipping board officials will be lenient in this matter as in the matter of boards and other stock not very heavy but which is included within the terms of the new order to commandeer all lumber having a 12-inch face and 24 feet or longer.

The policy of the board officials, it is understood, has been to permit many individual shipments for private purposes even under its first commandeering order, which was much broader than the new one. Such permissions were granted pending modification of the order and because the board officials realized that they did not need everything they commandeered at first. The modified commandeering order as signed by Admiral Capps, general manager of the Emergency Fleet Corporation, is as follows:

The need for lumber in the larger sizes for shipbuilding purposes is so great that it appears to be necessary to take radical steps in order to secure the success of the wood shipbuilding program. On account of unsatisfactory deliveries to date, we find it necessary to control, to a certain extent, the sawmill output of large sizes in long leaf yellow pine.

By authority vested in the President of the United States by Congress in an act entitled "An Act making appropriations to supply urgent deficiencies in appropriations for the military and naval establishments on account of war expenses for the fiscal year ending June 30, 1917, and for other purposes," which act became a law on June 30, 1917, and by authority delegated to the United States Shipping Board Emergency Fleet Corporation by executive order of the President in his proclamation dated the 11th day of July, 1917, copy of which is attached hereto: I hereby require and order:

That you place at the disposal of the United States Shipping Board Emergency Fleet Corporation all long leaf yellow pine lumber produced by you having a face 12" wide or over and a length of 24' or longer, and deliver the same, or parts thereof, in such quantities and at such times and to such persons as may be specified in orders hereafter to be given you, and that you do not sell or dispose of said lumber or any part thereof unless you first obtain authority from the United States Shipping Board Emergency Fleet Corporation or the Priority Committee of the War Industries Board.

This letter supersedes all previous instructions of a similar nature. An immediate acknowledgement of the receipt of this letter is requested.

Confident of Continuance of Wooden Ship Program

The shipping board has been permitting shipments of 30-foot stock by mills that are not cutting ship schedules.

The question of a retroactive price for the first 100 yellow pine ship schedules was not settled at the last reports. F. L. Sanford, representing the Southern Pine Emergency Bureau ship price committee, was in touch with the shipping board officials for some days

carrying on negotiations over the matter, but there was no agreement before he returned south. The lumbermen want \$40 or more per 1000 feet, it is reported.

It is further reported that as a result of the alleged disagreement on the subject between the lumbermen and the shipping board, the Federal Trade Commission has been asked to serve practically as arbitrator, in accordance with the terms of the understanding reached some time ago between the board and the southern pine people. The trade commission has been investigating the cost of production in the lumber industry for some time, especially with reference to ship schedules, but its report is said not to be ready. With a view to getting quick action in the way of a report which will be utilized by the shipping board in fixing the retroactive price on ship schedules, it is said that a number of lumbermen have advised the commission that they will waive hearing on the tentative findings of the commission as to the cost of production.

The trade commission's investigation has gone far enough to convince lumbermen here who are well informed that pine ship schedules ordered by the government hereafter will be paid for at prices a good deal higher than those heretofore agreed to by the government authorities. If this should turn out to be true, the question is likely to be asked, Why should not hardwood ship schedules bring higher prices also? as the cost of production, including labor and materials, and the difficulties of operation, have increased in the hardwood industry as well as in other branches of the lumber industry.

That there can be and probably will be a great many more ship schedules produced in the United States than have yet been ordered unless the war should suddenly come to an end, is the belief of lumbermen here who are well informed about the timber resources of the country. They hold to this belief despite recurring reports that the wooden ship program has been abandoned, etc. The basis for the latest report along this line is apparently found in a letter from Admiral Capps to Senator Chamberlain of Oregon, in part as follows:

As you will recall in our very recent interview, I stated at considerable length the conditions governing the action of the fleet corporation at the present time with reference to the construction of wooden vessels. The present unsettled conditions of labor on the west coast and the difficulty of obtaining material of sufficient quantity and with sufficient promptness on the Atlantic and Gulf coasts are seriously interfering with our wooden ship program. I also stated very frankly that the building of comparatively small capacity wooden vessels if large capacity steel vessels could be built as quickly was not to the advantage of the government in this crisis.

This was dated September 17 and it is claimed that conditions, especially in the South, have improved considerably since then. Although writing against wooden ships, there is reason to believe that government officials, who realize the seriousness of the submarine campaign, would be glad to have more wooden ships or any other kind of vessels. As a matter of fact, it is claimed that the full wooden shipbuilding resources of the country are not being utilized. There are said to be many small yards that are not being utilized, the policy seeming to be to give contracts to large yards and to build government shipbuilding yards, which takes a long time.

In connection with the latter it is reported that 50,000,000 feet or possibly more timber and heavy lumber will ultimately be required to build docks, ship ways and other preliminary construction at the Hog Island government shipbuilding plant where the fabricated steel vessels are to be put together, it is said, at the rate of one per day, more or less.

Orders for 20,000,000 feet of this stuff, besides a lot of piles, have been distributed at the suggestion of the lumber committee. Piles were ordered by the thousand from the Georgia-Florida Yellow Pine Emergency Bureau, it is understood, at 8 cents each. The same bureau received orders for about 3,000,000 feet, dividing with the Southern Pine Emergency Bureau on the basis of one-fourth and three-fourths, the order for some 12,000,000 feet of timber less than 12 inches square. The Douglas Fir Emergency Bureau was given orders for about 8,000,000 feet of timber 12 by 12 inches and larger for Hog Island construction work.

One difficulty about the government shipping program, it is asserted, is the lack of terminal facilities sufficient to handle the traffic that will be borne overseas for American army and allied needs.

Suppose I buy standing timber for \$100,000 and the next day sell it for \$150,000. I have sold all of it in one sale and got my capital back the first day and \$50,000 profit. Suppose I cut it up into lumber and sell it in that way, taking a year in which to cut it; each day I cut and sell I get part of my capital back. When I have sold it all I have all my capital back and the profits on my investment. As a matter of justice one should not have a deduction on the whole amount of original capital when in the nature of the business his capital is from time to time returned to him as in the case of timber, oil, and mining business and such returned capital should not be used as a basis of deduction.

Major Wood Arrives in France

Major G. L. Wood, vice president and general manager of the R. E. Wood Lumber Company, Baltimore, Md., whose appointment as major in the forestry service of the United States has been announced in the **HARDWOOD RECORD**, has arrived safely in France, word to this effect having been received at the office of the company some days ago. Major Wood has temporarily severed his connection with the company in order that he might take up duties with the forestry forces behind the firing lines, where the men will be used in getting out lumber and other wood products needed for military operations or to carry on the reconstruction in progress. He is one of the lumber experts who have thus resolved to give their special knowledge to the country during the war. Practically all of his life has been spent in the lumber business and he is familiar with every phase of it, from the logging operations to the mill and even through to the consumer. He has given much time to supervising the operation of the company's mills in West Virginia, North Carolina and Tennessee, and is exceptionally well equipped for the task he will be called upon to perform during the war. Prior to sailing he spent much time in Washington conferring with the military authorities.

Will Act As Lumbering Expert on Colonel's Staff

A well qualified patriot might properly be described as one whose past experience fits him exactly for the position which his government desires that he serve. A striking example in mind is F. M. Bartelme of Minneapolis, Minn., a well known young lumberman of the Northwest who has become captain on the personal staff of Colonel W. A. Mitchell, commanding officer in the engineering corps, and in that position will act as advisory lumbering expert and supervisor and inspector for Colonel Mitchell in his command over the forestry operations on the European western war front. Captain Bartelme, who for several years has been president of The Bartelme Company, and vice president of the Bartelme-Lloyd Company, hardwood concerns of Minneapolis, is qualified for the task Uncle Sam has selected for him for the following reasons:

Beginning in 1902 he worked for four months about the sawmill and lumber piling yards of the Upham Manufacturing Company, Marshfield, Wis.; then in turn worked as tallyman and lumber inspector, and for a period of several months following sold lumber on the road for Upham & Agler of Chicago; later with the Wisconsin Oak Lumber Company, at an operation in northern Wisconsin, he experienced every job in lumbering and sawmilling from the time the ground was first broke in building a logging railroad into the timber through almost every capacity a sawmill affords a workman. Then for two years he was northern buyer for Upham & Agler, and before starting in business for himself in 1908, he had experienced every activity in woods work and the manufacture and merchandising of lumber. The Bartelme Company, which was organized in 1908, was incorporated in 1910, and has continued since as an extensive wholesaler of hardwoods. The Bartelme Company also operates a distributing yard at Cairo, Ill., for the southern hardwoods that it handles. The Bartelme-Lloyd Company, of which he is also an officer, wholesales and retails hardwoods in Minneapolis, handling both native and foreign hardwoods. Mr. Bartelme, who is the son of F. M. Bartelme of Chicago, president of the Keith Lumber Company, one of the largest dealers in native and foreign hardwoods in the city, is also one of the organizers and is a director of the Langlade Lumber Company of Antigo, Wis.

Mr. Bartelme was originally recommended and chosen by the Forestry

Department and lumber committee of the National Council for Defense as major of the forestry battalion comprising lumbermen and woodsmen for the Great Lakes district, but it later developed that he could not be nominated for the post because he is not forty years of age—he is only thirty-five. There will be ten forestry battalions in the engineering branch of the service, each commanded by a major and the entire command under Colonel Mitchell, who is colonel of the corps of engineers. When it was learned that Mr. Bartelme is too young to be a major, Colonel Mitchell offered him the place as advisory lumbering expert on his personal staff, a place he accepted with the rank of captain. He is now in the East ready for service abroad, and while away his hardwood concerns at Minneapolis will be operated along lines as usual.

President Bartelme of the Keith Lumber Company is entitled to hang out a service flag bearing two stars, because another son, T. T. Bartelme, is in the service of the American Red Cross and just a few days ago he returned from France after having been in that country two months on a special mission. T. T. Bartelme, who is the youngest son, was formerly connected with his brother, F. M. Bartelme, at Minneapolis, but several months ago retired and traveled on account of his health. After being in Italy for a year he went to South America to look after the foreign hardwood interests of the company of which his father is president, which are extensive there. Having fully recovered his health, he offered his services to the Red Cross at the outbreak of the war, and since then has served in important capacities. In view of what his sons are doing to help their country win the war F. M. Bartelme is one of the proudest fathers in Chicago.

Another Lumberman Reaches French Soil Safely

Second Lieutenant Roy Cookston, serving with the Tenth Engineers, the first forestry regiment going abroad, is reported to have reached France safely with the unit with which he sailed towards the middle of August. Mr. Cookston has been a timber man during all of his business career. He is twenty-six years old and was born in Louisiana. He has been with the Utley-Holloway Company, Chicago, now for some little time, having left the Pioneer Pole & Shaft Company at Memphis to take up his new connection.

Mr. Cookston during his services with the Utley-Holloway Company spent all of his time in the woods and around the southern mills. He has been a timber looker and estimator and spotted and estimated the big tract of hardwood near Clayton, La., which the Utley-Holloway Company will soon be operating on with its new mill at that place. He spent considerable time of late going around among the southern mills and looking over and buying up blocks of hardwood lumber which fitted in with the trade handled by the Utley-Holloway Company.

He left the company toward the end of July and went directly to Washington, going into the forestry regiment in Canada, and as stated, sailing with the first contingent of the woods workers.

Imports Records Broken

For the first time in the history of American trade the imports of raw materials passed the billion-dollar mark during the fiscal year 1917. According to statistics published by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, the exact total was \$1,109,655,040, a noteworthy increase over the \$948,825,500 in 1916 and the \$632,865,860 in 1914, the last normal year before the war.

The Lumberman's Round Table

The Value of Government Business

One of the principal hardwood producers of the country, coming recently on the large project of government business now being handled by his concern, emphasized the fact that it is highly desirable in many ways, but especially in the expedition with which it can be handled. Government materials have the right of way, and hence when a lumberman has occasion to supply lumber to Uncle Sam or to some contractor who needs it in making a product being used by the government, he is in a position to get service from the railroads which might not be available otherwise.

In fact, this particular lumberman said that government representatives usually see to it that cars are furnished promptly to take care of the movement of materials being used on contracts for army materials and supplies. With the scarcity of cars the biggest difficulty in the way of keeping business up to the right point, it is obvious that this is a very satisfactory feature of government work, entirely apart from the matter of assisting the country in the successful prosecution of the war.

This situation may be rather rough on the private buyer, and undoubtedly is handicapping him in many ways; but right now service of the nation comes before everything else.

Changing the Business Line-Up

The business which is cast in hard and rigid lines is the one which is having most difficulty getting along today.

Conditions have changed so rapidly in the past year that only the lumberman who is alert mentally, and who has promptly changed his alignment to meet the new situation as it has developed, has been in a position to make the most of his opportunities.

Mobile armies are the only ones that are worth while. Force must be movable and elastic to be most effective. So with business organizations; they must be in shape to respond to and to adapt themselves to changing conditions of every kind.

For example, the demand for hardwood lumber has changed in many ways. Probably the most active mover at present is 6/4" lumber, because so many items used in war work, such as truck body construction, aeroplane stock, etc., are wanted in that thickness. The lumberman who realized the situation cut more 6/4" and less 4/4" lumber. In the same way the hardwood man who kept up with conditions and realized that quartered oak was going to be used in making aeroplane propellers put himself in line to supply material for that purpose, instead of waiting for the government to send an inspector around and tell him what he must prepare to do. In short, the successful lumberman today is the man who is not asleep at the switch, but who is watching for every new development, and getting his whole organization in line with it.

Training the Office Man

The office manager of a certain hardwood concern, who is regarded as an extremely efficient member of its organization, is naturally fully occupied with the routine of office work, and seldom gets out into the yard or has occasion to visit the mills where the product which the concern is selling is manufactured.

Yet he has had intelligence enough to appreciate the fact that his knowledge of the business will necessarily be limited by his knowledge of production, and of the practical details of lumber manufacturing. Therefore he has lost no opportunity to acquaint himself with the situation, and to improve his efficiency along these lines.

Many another man, content to know that his work inside the office was satisfactory, would have refused to take an interest in the business outside of his particular domain, but would have confined his efforts to such matters as accounting, billing, etc. These are important things, of course, but they are not all-important.

The office man referred to recently had a vacation of two weeks coming to him. He could have spent this time at home or visiting the bright lights of the big cities. He might have gone fishing or rested in the country. But he did none of these things. He asked that he be sent to the mills during that time, explaining that the change and outdoor life would be pleasant and agreeable to him, and that it

would enable him to do better work for the company, by reason of his enlarged outlook and his increased familiarity with the production end of the business.

It is not surprising that the office manager is more than glad to arrange matters in this way. It goes without saying that the office manager will be of more value to his company than heretofore, and that the time invested will be of real benefit to him and to his employers. There is no doubt that enthusiastic effort in this direction will inevitably make its own reward; and that it is appreciated by the concern which gets the immediate benefit is also the case.

Excess Profits and Working Capital

One of the unfortunate features of the war tax on excess profits is that in most cases it must be taken from working capital and not from an idle surplus unemployed in the business.

That is to say, the profits of an active business, and especially an active lumber business, are not as a rule cash profits, but are represented by inventories of lumber on hand and in transit, book accounts, plant and equipment, etc. Even though these are large and represent an excellent margin of profit on the business handled, it is unlikely that the lumber concern is "flash" in the sense that it is overburdened with cash.

Concerns which have done well have gone ahead increasing their facilities. The wise lumberman who has made money has put it back into his business, either by buying additional timber, adding to his manufacturing equipment, so as to produce lumber more efficiently and more economically, or extending his business along some other line. Hence the excess profits tax means, in effect, the withdrawal of working capital from a business which in most cases needs that capital.

The war revenue measure is a law and will be enforced, but it seems worth while to call the situation to the attention of lumbermen, so that in planning their business they will take into account the provisions that will have to be made for the payment of the tax. Likewise, it is to be hoped that this burden, justified only by the extraordinary needs of the government, will be lifted as soon as conditions warrant.

Campaigning Against Wood Wheels

Are manufacturers of wood wheels for motor trucks and other automobiles going to allow their product to be put on the taboo list without an effort?

The new standardized motor trucks of the government, two of which have been put in service already, are fitted with wooden wheels, but one of the principal motor truck publications comes out with this statement:

"It is indeed unfortunate that the two standardized United States Army motor trucks will be fitted with wooden wheels when the government is anxious to have nothing but metal wheels. There seems to be some doubt in the mind of the board having the standardized truck work in hand whether a sufficient quantity of metal wheels can be had in time."

This publication then proceeds to enlighten the government by publishing statements from leading manufacturers of metal wheels, who say that they are in a position to produce them in sufficient quantities to take care of the demand in connection with the standardized trucks.

Wood wheels have been standard equipment in the automobile field for a long time, and it is doubtful if there is any record showing that they have not held up in service. There likewise seems to be no reason to doubt the ability of manufacturers to supply them. But in view of the aggressive work being done to give metal wheels for government trucks the precedence, it looks as if manufacturers of wood wheels and parts for them ought to take some interest in the situation before a final and adverse decision is rendered.

Many of the box factory owners are kicking and fussing about the increased price of box lumber. Why not get more for the boxes? With a demand that taxes the box making capacity of the country it should be comparatively easy to get any reasonable increase in box prices.

VENEERS

Veneered Goods Here to Stay

Published Opinion Notwithstanding, the Future of the Furniture Industry Will Depend Upon Well-Made Veneering

PREPARE THE WREATHS. Veneer and panel men, bosses and bossed, who depend on the furniture trade for your daily bread, make ready for your demise. You sellers of, or workers in, glue, who have aught to do with laminated work for furniture men, take heed lest the future finds you idle. Particularly you vegetable glue manufacturers, who have practically no field outside the wood-working trades, listen to the approach of the slow and mournful music. All mentioned directly or indirectly tremble, for a prophet has called the turn, and the end of your world approaches.

You wonder why the raving. Give your attention to the following extract from an editorial which recently appeared in a furniture trade paper of no mean repute. Wrote the editor, in a sort of a resume of furniture styles:

It is the writer's opinion that a new style is showing up. This style, when it has gained popularity, which I predict will be within a couple of years at most, will be called "Renaissance." It will not be Anglicised, but purely our own. It will have honesty written all over it—there will be no "veneers" to peel off. Veneering was all right when properly done, but glue was all the old artisans thought of using. Nowadays most factories are using a mixture of sago and common flour. What few pieces we have seen presaging the coming of this new style have embodied many structural features borrowed from Italian peasant furniture. They were keyed together, fashioned with tenons which hold the principal members intact—solid lumber was used, in fact the pieces were built—not stuck together.

There you are, veneer, panel and glue men. An editor of broad experience tells you that "within a couple of years at most" honest furniture of solid lumber will have the right of way and dishonest furniture containing "veneers" will be ditched. Oh, hum! No doubt there will always be those who, looking back on the days of long ago through the mists of years, will insist that the present cannot compare in any respect with those times; that ideals have been lost, standards lowered and quality disregarded, so that the products of modern workmen are far behind those which were produced in the good old days.

But don't get down hearted, even though that writer may prove correct in his prediction as to a new style of furniture, because when it comes it will have to be made largely of laminated work. Of course some of it will be made of solid lumber, just as some furniture today is made of solid material, but veneers and glue will still continue in use in the furniture field, and because of practicality and necessity their use must increase instead of diminish.

It may be well to consider somewhat the extract quoted. Pass quickly over the fact that there is a slight inconsistency between the remarks: "It will be purely our own," and, "What few pieces have been seen have embodied many structural features borrowed from

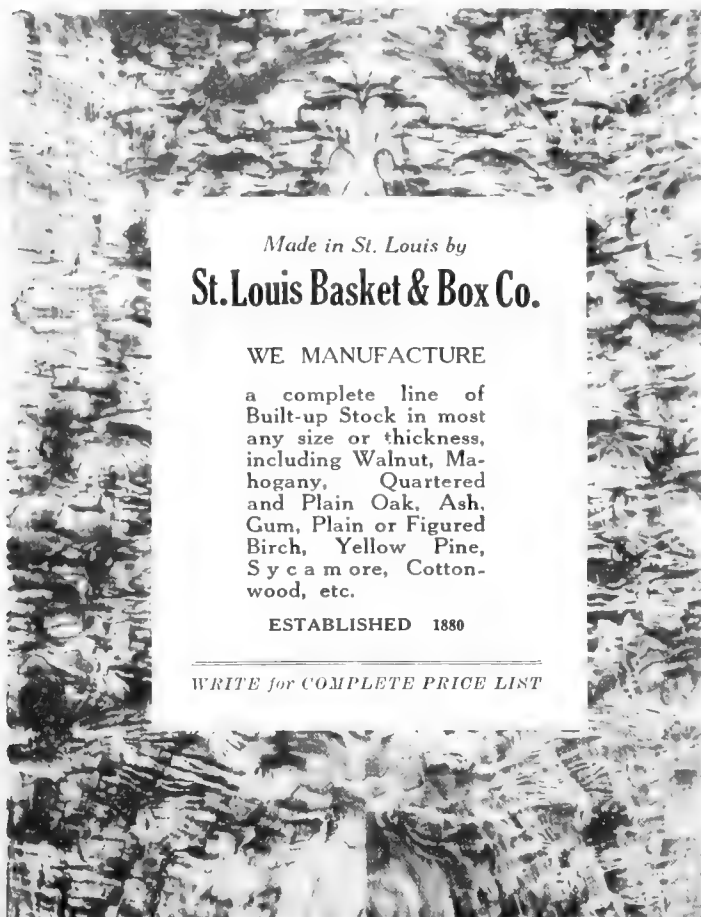

Italian peasant furniture." What's a little inconsistency between friends? Then hesitate at the innuendoes: "It will have honesty written all over it—there will be no veneers to peel off. Veneering was all right when properly done, but glue was all the old artisans thought of using. Nowadays most factories are using a mixture of sago and common flour."

No brief regarding the respectability of veneered products is needed here. Good work is good, and bad is bad, whether done in 1817 or 1917. But the editor implies that glue is altogether to be blamed for veneers "peeling" and he casts a surreptitious slur at vegetable glue in his words "a mixture of sago and common flour."

The writer of this will not admit it to be true that glue was all the old artisans thought of using. The old artisans were cabinet makers, not manufacturers, and in their time it took longer to build one piece than it does to manufacture 500, or even 5000, today. The difference is between individualism and team work. But the old artisans never thought of using 1 16-inch veneer, to say nothing of 1 32-inch. Much of their work was

done with $\frac{3}{8}$ -inch material, which is from six to twelve times as thick as that used now. As a result there was comparatively little danger of cracks and other defects making their appearance. The old artisans never thought of having finished goods in the homes of consumers within ninety days from the time the timber was cut, as is sometimes done at present. The material that the old artisans used was dried thoroughly by natural processes, and more often than not it was kept around the house or shop several years before it was built into furniture. When it came to laying veneer the craftsman didn't put a glued-up top in a press in the morning and have it out and through the machine room into the cabinet room in twenty-four hours, as some try to do today. Admit that the work they turned out was very good when finished, can any one tell how many panels or tops they had to repair before a piece of work was completed?

The old artisan was all right, but his days are gone. His work was individual, mostly done with hand tools, and there was pride in the making. He used animal glue because that was all he had, and he used thick veneers because progress had not showed how to handle thin ones, just as he used hand tools because power driven machinery had not been developed. If an all guiding Providence had seen to it that vegetable glue was discovered before the animal product, the old artisan would have done just as good work.

The writer of this feels that the editor quoted must have been in some haste when he wrote that extract, because he has a deep knowledge of furniture matters, and he surely knows that veneering is all right today when, properly done, just as in the past. He must know that today's work necessarily has to be better, in order to stand up, than that which was made with veneers many times as thick as those which find a place today. The thickness of the face stock protected it against many of the weaknesses to which it is exposed at present. Work done in the past would be out of the question, judged solely from the standpoint of quality, today. The present day manufacturer is obliged to adjust every detail of his operations to the increased sensitiveness of the thinner material which he is working. When a face veneer $\frac{1}{32}$ of an inch thick (thin would seem more appropriate to say) is put down, and not only makes a splendid appearance, but stays in place for an indefinite period, a much greater achievement has been recorded than when veneers twelve times as thick are used.

As to the coming furniture having no veneers to peel off, it can only be said that hardly a month passes but that some furniture manufacturer finds his future welfare demands that he turn his attention to laminated goods. In passing it may also be well to remark that "figure" which plays so important a part in furniture of the present, is somewhat more difficult to obtain in lumber than in veneers. That is another little reason why veneers are bound to be demanded by the industry. Still, veneers properly glued do not peel.

As to that invention, vegetable glue, which the editor, in a supercilious air, refers to as "sago and common

Such logs as these put the "Choice" in "Hartzell's Choice Walnut"

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

flour," let it be noted that whereas ten years ago it was almost unknown, and when heard of was looked upon with doubt, its use has grown so that pianos, phonographs and all grades of furniture and panels are glued up with this veneer glue, and approximately 2,000,000 pounds are now being used each month in the wood-working industries. Long time users, who have used it **right**, say that it is superior to the glue it has displaced so largely. If one wants evidence as to its merits and

benefits let him ask any fifty furniture manufacturers what they think about it, and hear the majority of them testify that they would not care to return to the use of glue they formerly used, also if it were not for the new product it is likely their plants would be closed today.

Prepare no wreaths, or, if you must pluck the flowers, place them reverently on the biers of the old artisans, for the glue manufacturers, veneer and panel men—bosses and bossed—will live for eons to come. A. B. M.

Veneer and Panel Inspection Vital

It Isn't So Bad to Make Mistakes, But It Is Inexcusable To Let Them Get By

THE GERMANS are said to be exceedingly angry with their diplomats, not because they have attempted underhanded and unfair things, but because they have been stupid enough to get caught at it.

And, as a matter of fact, the world judges entirely according to what it sees, without attempting to guess what is going on behind the scenes. In manufacturing, all that counts with the customer is what is delivered to him. He doesn't know or care what the producer had to accomplish to achieve the result.

This is by way of preface to the statement that inspection is one of the most important features of the panel business. The assertion may be stretched to include veneer making, as well, for indeed it applies to every line of business where quality and variations in quality enter into the situation to any marked extent.

The panel man has so many operations to perform, and each one is so definitely dependent for success on the ones preceding, that inspection at each point along the way is needed to make sure that a proper foundation has been prepared. And in the shipping department, where the final "once over" is given the stock before it is crated and shipped out, it helps a lot to have a vigilant and eagle-eyed inspector who will take note of defects and throw out panels which are not up to the mark in every way.

The trouble in the average panel factory is that inspection is taken as a matter of course, and that it is assumed that those handling the material will notice if everything is not as it should be. But ordinarily the man at a machine is most interested in the performance of the operation to which he has been assigned, and does not always look the material over carefully. He has his job to do, and he does it; and if he doesn't happen to see the bad spot, it is hardly to be regarded as his fault.

Therefore there ought to be someone definitely charged with the duty of inspection, who will look the panels over critically, and will do his best to find some good reason for throwing them out. That sounds like an unreasonably harsh attitude to take, but it should be

remembered that that is the buyer's attitude, and that it is a lot better to find fault with the product before it is shipped than after.

One of the most successful panel men in the country said not long ago that he came near losing his best account simply because a few panels in a big shipment were damaged in sanding. The face veneers were thin, the sander cut through into the core, and small but easily noticeable holes in the faces were made. Naturally, these panels did not stand inspection; and the letter which the panel man received from the buyer was much more severe a roast than the amount involved would have indicated.

When a buyer is asking for the best that can be produced, and is paying top-notch prices for it, he does not overlook trifles, nor make excuses for the shipper. The latter is supposed not to be in the class for which excuses have to be made. The customer was simply out of patience with the manufacturer because his methods had not been made accurate enough to rule out defective material, and to save the user the trouble of throwing it out.

This customer is a big talking-machine concern, which has a national reputation for its products. It is hardly possible that the concern could have put the panels into its cabinets and finished them without noticing the defects, but the remote chance of this happening was what made the buyer dissatisfied with the service he was getting. It made him feel that the panel concern could not be depended upon absolutely, but that the product which it delivered had to be gone over very carefully to eliminate defective panels.

The same thing happened not long ago in the case of a manufacturer of rotary veneers. This stock was not particularly high grade, but nevertheless the customer wanted accurately manufactured veneers. It turned out that the stock which was shipped, comprising a full carload, was very inaccurately cut, with the result that there was a wide variation in the thickness of the pieces. It was supposed to be 1/16" stuff, but veneers were found ranging all the way from 1/8" to 1/20". The car was

rejected, and the manufacturer had his troubles in getting the material out of the way.

This concern not only lost the profit involved in the sale of a carload of veneers, and not only lost the money represented by the expense in freights, extra handling, selling cost, etc., due to the necessity of moving the car the second time, but it lost this account absolutely and irrevocably. It would be next to impossible to convince this buyer that the veneer house which had shipped this car could be depended upon to carry out instructions without having to be watched closely. And the customer doesn't want to feel that he has got to inspect every shipment with the utmost care in order to avoid being stung.

The buyer of veneers and panels expects to make an inspection of the goods delivered to him, and he may even expect to find an occasional shipment which is not up to the mark, but he also expects that the product will run "true to form," as they say at the race tracks, and will be close enough to the mark always to show that the manufacturer knew what he was about, and was doing his level best to fill the order as written, and never to violate the spirit of the specifications, even if occasionally the letter was not adhered to.

Of course, buyers occasionally send out specifications that are much more severe than practical requirements suggest. They are written in this way, either because the buyer hopes to get something especially good, or because the user is not acquainted with the situation and does not know that allowances must be made for natural variations in the material. All this can be adjusted, but it is defects of actual manufacture that cannot be explained away, and that get the manufacturer "in wrong" with the buyer. And the bigger the buyer and the more important the account, the harder it is to restore the standing of a concern which has delivered material which was poorly turned out, and which was not carefully inspected at the time of shipment.

Wise members of the veneer and panel trade are learning that inspection counts for a great deal. Those who have had to do with government buyers since the war began know that inspection is the vital point, and that the buyer is not inclined to make very many allowances for a product that is not up to grade. And in the ordinary commercial transactions which make up the bulk of the average business, careful inspection at the mill or factory will go a long way to build up the reputation of the manufacturer for quality, and to conserve the good will which he has won as a result of satisfactory dealings previously.

One of the veterans of the trade, whose mill is famous for the fine quality of the veneers it turns out, spends a lot of his time in the plant. He is a good office man, but he is a better manufacturer, and he makes a point of being over where the stuff is being produced. He has a good superintendent, but he likes to see for himself what is going on. And it is a noticeable fact that while he visits all departments and looks into the work of the

day in each, he spends most of his time in the shipping room.

He likes to see the veneers as they are being measured and counted and crated for shipment. He frequently interposes his personal opinion regarding the suitability of certain stock for the order on which it is being shipped, knowing as he does the requirements of the customer. And when he goes back to the office, he has a very fair idea of the general character of the shipment, and in the case of a kick by the customer he can answer the complaint much more intelligently than if he had to depend on the verbal report of a subordinate.

This does not mean that every manufacturer should be his own inspector, because that is out of the question; but it does show that the wisest members of the trade appreciate how important this part of the work is, and give as much time to it as they can spare. The veneer man and the panel man should have trained employees who have been taught to discriminate, and who know when the product fits the work and when it does not. Likewise, they should be able to spot a poor product from the standpoint of manufacture, and to throw it out without a moment's hesitation.

In the panel business it is a good idea not to take too much for granted, in connection with the various processes of the work. In other words, it is a safeguard of the business to inspect the work as it goes through the factory. The foremen of departments and the superintendent can do this very well, and with a final close inspection in the shipping room there is not much chance for poor work to get by. In fact, there should not be much room for complaint if the inspection is properly done.

One of the things which sometimes slips by the inspector in a panel plant handling high-class work is errors made in matching up the veneers. This may have been properly indicated, but a mistake made in putting the pieces in place. A certain amount of artistic feeling is needed to detect faults of this kind, and to appreciate the mistake which was made in putting the veneers together. But an experienced man can usually pick out faces which were not properly matched, and send the panels back to the glue room for rehandling in this respect.

The best product, meaning the product whose reputation in the trade is of the best, is the one which is well made and properly inspected. A factory whose personnel and methods may not be 100 per cent right may still win a reputation for turning out good goods if its inspection is rigid, for it will detect errors and require remanufacture. And the very habit of watching for and locating mistakes is bound to react favorably on the plant, and lead to the correction of the errors of production which caused the poor product to reach the shipping room.

Machinery was turned over for the first time on October 15 in the new plant of the Inman Veneer & Panel Company, Louisville. Work in this plant was started early last spring, but failure of certain equipment to arrive held back construction considerably.

Veneers in England

The London Timber News, in speaking of demand for veneer or plywood, says:

There is a great amount of interest being shown in this wood nowadays, though stocks in the country are very meagre. Aeroplane and other manufacturers are wanting the wood in rather large quantities, but it is very difficult, apparently, to secure sufficient in first quality goods to meet the requirements. Shipments of fresh goods coming from abroad are very few and far between, and consequently it is necessary to increase the supply from home manufactured wood. America, unfortunately, cannot supply the United Kingdom with much in the way of plywood owing to the increasing requirements among her own users. She will probably be able to use as much as her own mills can produce. Hence there is small chance of getting much over here—at any rate, yet awhile. The wood most in demand is perhaps birch, though alder is also being wanted in larger quantities than it was a little while back. The dimensions required today are very numerous, though for the smaller thicknesses very high prices can be obtained, notably from 1½ to 4 mm. The thicker sizes are also wanted from 9 mm. right up to 25 mm. The latter wood, however, has to be specially manufactured in nearly all cases. The prices asked for plywood today vary considerably. Everything depends upon the kind of stock offered; 3 mm. 1st quality, for instance, commands anything from 45s. and upwards per 100 square feet, though there is very little available in 1st quality plywood of any kind. There is, of course, great difficulty nowadays in getting the wood into the country. Restrictions are very severe, and import licenses can only be secured provided it can be clearly shown that the wood is required strictly for government purposes. Freight and insurance are items to be reckoned with nowadays. The forwarding charges are enormous, and these are no doubt the direct cause of the high prices ruling today for plywood.

Chance for Veneers in Italy

Before the war the piano makers in Italy procured most of their wood from Germany. This included the veneers of which the tops and other panels were made, and also such heavier lumber as was needed. It is needless to say that Italy is importing no piano stock from Germany these days, and there is little prospect of any such imports in the near future. It is equally true that the piano manufacturer in Italy is not very busy at this time. But a time is coming when the makers of pianos in that country will need stock and the opportunity to get American veneers into that market should be particularly favorable at this time. Information is not at hand showing just what woods are wanted there. Our government's trade commissioners now in Europe, Messrs. Simmons, Browne, Oxholm, and Walker, ought to be able to procure the necessary information in a short time, and the makers of veneers in this country would do well to be on the lookout for the earliest reports of those commissioners regarding the Italian situation.

The United States will be in a position to get the business which Germany has lost in Italy, though it is certain that the Germans will strike for it as soon as the war ends. It will be good policy to be ahead of them. The woods employed by Italian manufacturers of pianos are probably not much different from the woods used in the United States. Mahogany is one of these, and oak and black walnut are others in the veneer list. The Italians have long been using red gum for fine work, though they have not always called it by that name. The figured gum bears so close a resemblance to Circassian, English, French, and Italian walnut that it is successfully substituted for those walnuts (which are all the same wood under different names).

All European and Turkish walnut will be so scarce after the war that it will cut little figure in Europe or anywhere else for many years. It has been used up for gunstocks and more must grow before more can be cut. American black walnut and American red gum have a chance to get a foothold which they ought to work for all that is in it. Italy is not the only country where prospects are fine, but it may be cited as an example. Makers of piano stock other than veneer have an opportunity to get a foothold now which will stand them in hand in the future.

American Walnut Veneer

A Sample Which Shows the Class of Veneer We Handle

Our Efforts Are Centered in Obtaining the Highest Grade of Figured Walnut for Veneer Cutting.

Our customers' often repeated orders prevent us from keeping a large stock on hand, but as we are continually selecting our stock from the large quantity of logs we handle, we always have a nice line of the highest grade to select from.

Our reputation is based on "Quality, not Quantity," in our veneer business

PICKREL WALNUT COMPANY
ST. LOUIS, MISSOURI

*Highly
Specialized
Workmanship*

*Completely
Developed
Facilities*

The two phrases above represent what is absolutely essential to successful panel manufacture. Our policy has been to educate all of our workmen as closely as possible along specific lines, and to omit no item of equipment that would help make for more nearly perfect service.

The supreme test of efficiency in veneer laying is admittedly the ability to successfully veneer bent shapes. It was on this work that the reputation and growth of our business was founded—this and a quite uncommon bent for artistic matching.

And remember, when you are ready to order we have a complete selection of veneers for your choice.

F. EGGERS VENEER SEATING COMPANY

TWO RIVERS,

WISCONSIN

certain price based on cost and a reasonable profit, and the manufacturers met in Chicago and apportioned the order among all the factories so that nobody was left out. In that way the government will get its wagons at a fair price and the manufacturers will receive a fair profit. It was done by teamwork, the buyer and the sellers pulling together. It is a good example of what co-operation accomplishes when honestly carried out. It developed that there was

seasoned stock in the factories for only 10,000 of the kind of wagons wanted; and three experienced buyers went into the field to get the remainder. They went into different districts, so that one would not bid against another. Thus the necessary material was secured quickly and at fair prices, and it was distributed among the factories according to their needs. The teamwork was perfect and the results satisfactory.

Pertinent Legal Findings

Queries on questions arising on any points involving the law as it is applied to lumbering and allied industries will be given proper expert attention through this department if submitted to HARDWOOD RECORD. There will be no charge for such service, but HARDWOOD RECORD reserves the right to publish questions and answers without designating names or location of inquiries unless specifically requested not to do so.

Seller's Excuse for Non-Delivery

When an agreement is made for a sale of lumber to be delivered in installments, and the buyer promises to pay for each installment within a specified time after receipt of the bill of lading covering it, his inexcusable failure to meet such payments gives the seller right to refuse to make further deliveries under the contract. The buyer is not justified in withholding payments because of ungrounded fear that the seller may break the contract by refusing to make future deliveries under the agreement. (United States district court, eastern district of Pennsylvania; Savannah River Sales Co. vs. McFarland; 242 Federal Reporter, 587.)

Liability for Injury to Minor Employee

If the attention of a minor employee in a sawmill was distracted from his work of guiding a log against a saw by imminent danger of a nearby defective boiler exploding, he is not to be precluded from recovering damages through his hand coming in contact with the saw on the ground of contributory negligence; the accident being fairly attributable to negligence of the operator of the saw in running the saw at a particular time when all present apprehended an explosion of the boiler. (Mississippi supreme court, Nix vs. Walker Brothers, 76 Southern Reporter, 143.)

Employer's Duty Concerning Cant Hooks

In a suit in which a logging employe claimed damages for injuries sustained through defects in a cant hook furnished him for use in loading logs on a car, the North Carolina supreme court recognizes the general rule of law that an employer is not under the same obligation to inspect simple tools and appliances, like hammers, ladders, etc., any defects in which must be as obvious to the employe as to the employer, as is required in the case of dangerous machinery, etc. But the court holds that, in view of the facts that severe injuries may be expected to flow from slipping of a defective cant hook, or breaking of its handle, and that plaintiff's foreman had assured him that the particular cant hook was in good condition, it was a question for the jury to determine whether the accident was due to negligence attributable to the employer, and, hence, it was error for the trial judge to declare as a matter of law that the employer could not be liable because any defect in the appliance must have been apparent to plaintiff. (Rodgers vs. Houtz, 93 Southeastern Reporter, 376.)

Negligence Concerning Planing Machines

It is actionable negligence for an employer operating planing machines to permit a safety hood over the knives to remain in such state of disrepair as to expose workers at the machine to injury. And, inasmuch as it is an employer's duty to make reasonable inspections of dangerous machinery to ascertain its condition as to safety, notice of defects in such a machine may be inferred from the fact that they existed for a long time before resulting in injury for which suit is brought. (North Carolina supreme court, Bunch vs. Foreman Blades Lumber Co., 93 Southeastern Reporter, 374.)

Terms of Payment

Where lumber was sold under an agreement that eighty per cent of the price should be paid upon receipt of bill of lading and invoice, the billing to be to the buyer direct, draft on him with bill of lading

attached was unauthorized and entitled him to reject it. (Arkansas supreme court, Webster vs. Goolshy, 197 Southwestern Reporter, 286.)

Scarce Labor Precludes Normal Production

The labor situation is becoming increasingly serious so far as the Memphis lumber industry is concerned. Every manufacturer complains of the growing scarcity of help for operating the mills and also for getting out timber in the woods. In fact, many manufacturers are quite free to confess that it is impossible to secure all the help needed to man the plants and to keep logging crews full. There is always considerable shortage of labor during the fall and early winter because of the drain made on the available supply by the demand for cotton pickers. But this year conditions are much worse than usual for the reason that the draft law has taken away so many men, and for the additional reason that there has been such a vast emigration of labor from the valley states during the past few months. And just now cotton pickers are being paid such a high price that millmen are confronted with the alternative of raising wages or finding themselves without the help absolutely essential to the conduct of their business. More money is being paid out by lumbermen than ever before and present indications are that still higher wages will have to be paid before the cotton crop is gathered, so keen is the competition for the labor available.

Practically ideal weather has prevailed during the past fortnight for both the cutting and hauling of logs in the woods, and both processes have made as rapid headway as the limited labor supply would allow. But there has been an undoubted slowing down in logging as a result of inability to secure all the help needed. And it may also be noted that there has been during the past fortnight a notable slowing down in the movement of logs to the mills at Memphis and elsewhere in the Memphis territory, due principally to the sharp decrease in the number of cars for handling logs. In fact, such a change in the car situation has come about very recently that the outlook for hardwood production has been rendered far less satisfactory. Two weeks ago the mills were getting all the logs they needed and were, in some instances, acquiring quite a respectable reserve. The big movement of cotton, however, has diverted so many cars from the handling of log shipments that logs are moving in quite a restricted way, and some of the mills are already beginning to run short on logs. Manufacturing operations have been on an exceptionally large scale during the past few weeks, thanks to the improved car situation, but, with cars becoming scarce again, indications are that the amount of lumber produced in the near future must necessarily show quite a pronounced falling off. Lumber manufacturers have feared a return of car shortage and likewise a decided scarcity of labor, both of which are calculated to restrict production still more. Now they are emphasizing the fact that winter is close at hand and that, when it comes, still another restrictive influence will be present—unfavorable weather for the cutting and hauling of timber. In fact, just now, there is not a little pessimism regarding hardwood lumber output, while the feeling is gaining ground that there is nothing in the situation to cause any apprehension whatever regarding excessive supplies of southern hardwoods for the late winter and early spring trade.

Lumber and Other Forest Products

Many people suppose that all forest material passes through a sawmill and is converted into lumber as its first stage in manufacture, and that some of this lumber is used in its rough form while other passes through factories to be further converted. This view is correct in part only. Not more than half of the timber cut in the forests ever goes to a sawmill to be made into planks and boards. Some of the largest items which do not enter a sawmill are fuel, poles, piling, and hewed railroad ties. The aggregate of these probably equals the whole lumber output.

Other products are manufactured without first being sawed into lumber, and some of these are both important and interesting. Hickory may be taken as an example. The sawmills of the United States report a yearly cut of this wood amounting to 278,757,000 feet; but factories consume yearly 389,604,531 feet, according to published statistics. This shows that 110,847,531 feet of hickory passes through factories annually which never was in a sawmill, or at least was never reported as lumber. Most of this is split stock which is worked into rough form in the woods by mallet and frow. Much of it is made into handles and spokes.

SPOOLS AND SHUTTLES

The industries which manufacture spools and shuttles for textile mills use 65,148,190 feet of wood per annum. Three woods supply most of it, paper birch, persimmon and dogwood. Most of the birch for spools is first sawed into squares and is duly listed in the sawmill output, but the same is not true of dogwood and persimmon. These are the leading shuttlewoods, and the factories which make shuttles receive their wood in the form of billets, some split, some round, and some in sawed squares. The sawmills of this country report a yearly output of 1,577,000 feet of persimmon and 2,584,000 of dogwood, total 4,161,000 feet. The shuttle factories consume yearly 3,571,760 feet of persimmon and 7,518,177 feet of dogwood, total 11,089,937. This leaves 6,928,937 feet of these woods reaching factories without passing through sawmills.

BOOT AND SHOE FINDINGS

It is not possible to determine from statistics what proportion of wood used in the boot and shoe industry first passes over the carriages of sawmills; but the proportion is very small. Several woods are in this list; but the chief ones are sugar maple and paper birch. The maple is for shoe lasts. It is crosscut into bolts in the woods and is split into billets long enough for one, two or three lasts each. These billets are the raw material of the shoelast factory. The paper birch which shoe manufacturers demand reaches the factory in the form of logs and these are converted into shanks and pegs with no assistance from a sawmill. The logs are usually peeled to make veneer, and the shanks for the shoe's arch and the pegs for the sole are cut by machinery from the sheets of veneer. The wood demanded by shoemakers in the United States totals 66,240,200 feet annually, and it is doubtful if one-fourth of it ever enters a sawmill.

LEAD PENCIL WOOD

Lead pencil statistics are somewhat difficult to get at, because they are included in a class designated as "professional and scientific instruments." The total demand of this class calls for 35,070,928 feet a year; but it cannot be definitely determined how much of this goes into pencils, but probably more than 20,000,000 feet. It is practically all southern red cedar, the kind that attains its perfection in the region from Tennessee to Florida; but a little wood of other kinds is made into cheap pencils. Very little of this cedar for pencils is listed in the output of sawmills, for it goes to pencil mills as logs or blocks and is worked up by special machinery.

The same species of cedar is cut into lumber in several of the southern states, but the lumber finds its principal use in the manufacture of clothes chests and wardrobes. Statistics of sawmill cut of cedar for the whole country are lumped together and are not separated according to species. For that reason, it is not known just how much of the pencil cedar is cut into lumber. Four other important and several minor cedars are included in the cedar lumber output.

The important species are the western red cedar, the Port Orford cedar, and the northern and southern white cedars. Spanish cedar which is imported in round logs should be included in the total cedar lumber output of the United States.

STAVES AND CHAIR STOCK

The material used in the cooperage industry is not a sawmill product, except a small part of it. Lumber statistics do not include the staves, heading and hoops which are consumed by the manufacturers of barrels and kegs. Most of this material is cut by saws, but at no stage of the process is it lumber in the common acceptance of that term.

Chair stock falls in the same class, so far as its method of manufacture is concerned. The chair stock mill cuts dimension stuff from short logs, and odds and ends of the forest, but no census collector ever includes it in lumber statistics. Chair stock is usually in small pieces, suitable for rounds, spindles, rockers, arms, backs, and the like. The longest of these pieces are seldom above two feet in length. The consumption of chair stock by manufacturers in this country amounts to about 290,000,000 feet a year, and it includes all the important hardwoods and some of the softwoods.

OTHER MATERIALS

Several other demands are made upon the country's forests for material which is not supplied in the form of lumber. Not less than half a billion feet of logs are annually converted into veneers.

A much larger quantity is consumed yearly as pulpwood. The total exceeds an equivalent of 2,500,000,000 board feet.

Tanbark and wood converted into tanning extract constitute another large item. If this material could be expressed in board measure the amount would be 500,000,000 feet a year.

Shingles made yearly require the equivalent of considerably more than a billion feet of lumber, and lath manufacturers take half as much more.

It is, therefore, apparent that when the statement is made that the demand for lumber in the United States calls for 40,000,000,000 feet of material annually, the figures are wholly inadequate to include the total drain upon the forests, even without including material used in its rough form, such as fuel, posts, and poles.

Cherry Still Available

Cherry, that excellent cabinet wood which many thought a thing of the past, is still available, and perhaps in larger quantities and sizes than generally believed. A correspondent was reminded of this recently for while in the rounds among the hardwood consuming industry a car of cherry had just been unloaded which appeared to be from large timber. A closer examination showed boards as wide as 16 and 20 inches and a fine lot of cherry generally. The plant was manufacturing oak and parquetry flooring, and inquiry brought out the information that it was also using about a carload of cherry a month and found it more satisfactory in some respects than mahogany and walnut. The cherry was being treated in a vulcanizer and was used for strips in making up borders and it seems to serve both the purpose of black walnut and mahogany. It is an excellent wood—easily seasoned, and when seasoned holds its shape well. The only question heard about it during the past decade was that of the scarcity. The supply is limited, but there is evidence that cherry is still available, and perhaps as was the case with walnut we may find that there is more cherry timber in the country than even those informed in the trade think there is, and under proper encouragement lots of it may be forthcoming during the next season or two.

One of the greatest shortcomings of the portable sawmill is in the cutting of high-grade timber for low-grade uses. To the observer it looks like the portable mill managers in the hardwood belt need a course of lessons on the value of and uses for clear hardwood stock.

Clubs and Associations

Hardwood Executive Committee Meets

The executive committee of the National Hardwood Lumber Association met in Chicago September 25, in quarterly meeting, primarily for the purpose of considering the question of the hardwood requirements of the government growing out of the war. The committee expressed itself favorably to taking more liberty loan bonds. The association's subscription to the first loan was \$10,000.

Hardwood Officials Meet

The board of governors of the Hardwood Manufacturers' Association of the United States met at Cincinnati October 23, and the same day there was a meeting of the executive committee on grading and a school of inspection. On the twenty-fourth the eastern territory members of the open competition plan met, while a meeting of the western members is scheduled for the twenty-fifth at Memphis.

Case Goods Men Alarmed Over Mounting Costs

At a meeting of the National Alliance Case Goods Associations, the membership of which includes furniture manufacturers from almost every section of the country, held at the Hotel Belvedere, Baltimore, Md., October 10, there was a general discussion of matters pertaining to the trade, the rise in the cost of supplies and the constantly increasing cost of labor. The latter problem appears to be the most serious of all and is causing grave concern. It is contended that something must be done to impose a limit on these demands if the manufacturers are to continue in business. The alliance was organized in Cincinnati six months ago and this was its first convention. Some of the largest furniture manufacturing concerns east of the Mississippi attended the session. George W. Whitworth is president of the organization.

Appoints Chicago Officers for Hoo-Hoo

Vicegerent snark A. C. Quixley for the northern Chicago district of the Concatenated Order of Hoo-Hoo announces the following officers for the coming year:

Snark: A. B. Cone, J. L. Lane; senior Hoo-Hoo, Minor E. Botts, Stacy C. Bennett; junior Hoo-Hoo, Douglas Malloch, L. J. Pomeroy; scrivener, A. B. Carson, Clarence Boyle, Jr.; bojun, G. A. Vangsness, Robert Slayton; jabberwock, A. H. Ruth, Lesh C. Forrest; custocatian, F. M. Baker, Leonard Berg; arcanoper, Tom A. Moore, John J. Anderson; gurdon, E. J. Lundin, George W. Pither; executive committee, Stacy C. Bennett, chairman, A. L. Ford, A. H. Ruth, Minor E. Botts, E. J. Lundin, Tom A. Moore, Lucius E. Fuller, George W. Jones, Fred J. Hussey, G. A. Vangsness, George Burgoyne, Hamilton Daughaday, R. S. Kellogg.

Appalachian Logging Congress Postponed

On account of the enlistment of Henry Grinnell, secretary of the Appalachian Logging Congress, the proposed fall meeting which was to have been held at Knoxville, Tenn., on October 20, has been postponed to an indefinite date. It has been suggested that J. R. Williams, editor of the Appalachian Trade Journal at Knoxville be made secretary of the Appalachian Logging Congress.

Before the matter of entering one of the forestry regiments came up. Mr. Grinnell had suggested that Mr. Williams take the secretaryship of the association. It is now suggested that in order to avoid having the fall meeting go by default, it is quite likely that Mr. Williams will accept the temporary secretaryship until after the meeting. At the meeting the question of permanent connection may be considered. The exact date of the annual meeting has not been set but it probably will be late in November.

"Lumber Week" at Memphis

The third week in January may be properly designated as "lumber week" since four prominent hardwood lumber organizations having their headquarters in Memphis will hold their annuals here during that time, and since the crowning event of this period will be the tendering of a banquet to all the visiting lumbermen by the Lumbermen's Club of Memphis Saturday evening, January 19.

The organizations which will hold their annuals during the period in question and the date of each are given herewith: January 15, Southern Hardwood Traffic Association; January 16, American Oak Manufacturers' Association; January 17, Southern Alluvial Land Association, and, January 18, Gum Lumber Manufacturers' Association.

Fixing of the dates was arranged in Memphis at a recent conference of representatives of the associations and officials of the Memphis Lumbermen's Club.

The plan of having these associations hold their annuals on succeeding dates was tried out last year and proved so satisfactory that the officials are quite willing to use it again. It has been found that, in addition to saving a great deal of time and expenses to the individual lumbermen, a number of whom are identified with two or three of these organizations, the plan greatly increases attendance and thus stimulates interest in association work.

The third week in January will be a big time for the lumbermen unless all signs fail, as there will be representatives here from all parts of the

GOOD ROAD BUILDING VITAL TO LUMBERMEN

The item of road building has become quite a substantial one in the budget of the average lumbering operations. This, of course, is more true in some parts of the country than others, but, generally speaking, it holds true that the average lumber operator is interested in seeing good roads.

Granted then that the outlay for this purpose is an assured part of the expense of sawmilling, the sawmill operator should be interested in seeing that the road he secures for his outlay will be the best and most lasting possible. In other words, let the investment be a good one, one which will not only be of direct benefit to the man who puts his money into it, but of equal benefit to the public at large.

It so happens that Hardwood Record is in very close touch with the men who furnish materials and machinery for the building of lasting roads of modern design and construction, roads which assure success rather than failure of investment in this direction.

Hardwood Record will be glad to co-operate with lumber manufacturers whenever the question of proper road building may be considered.

country. The Lumbermen's Club will try itself on the occasion of the banquet and may be expected to surpass some of its other brilliant achievements as a host.

Southern Logging Congress

The seventh annual congress of the Southern Logging Association met at the Grunewald hotel, New Orleans, La., October 24, for a three days' session. The meeting took up the regular work after an address had been made by the president, Oscar Marsau, and the report of the secretary was read by James Boyd.

The state forester of Louisiana, R. D. Forbes, delivered an address on the progress in caring for timber, and was followed by a paper by V. C. Langley, Laurel, Miss., on the topic of efficiency in men employed in the various departments of wood operations.

The common diseases of mules, oxen and horses employed in logging operations, with directions for the prevention or cure of such diseases, was the subject of an address by Dr. N. M. Parker of Louisiana. Another paper by a member of the Sweet Feed Manufacturers' Association, pointed out the necessity of a balanced ration for working animals.

Reed Gammill of the Gammill Lumber Company, Pelahatchie, Miss., described a method found satisfactory in paying men for felling trees; and this was followed by a round table discussion on the subject of getting out ship timber, and an address by W. W. Ashe on the relative cost of logging large and small trees, followed by a general discussion of railroad building as a part of logging operations, and the relative cost of coal, wood and oil as locomotive fuel. There were papers concerning skidding and pull boat problems; logging with teams, and housing and feeding work animals, and housing and feeding men.

S. J. Hinton of the Finkbine Lumber Company, Stillmore, Miss., addressed the meeting on the comparative cost of purchased vegetables and those grown on the company's own land. The garden where the experiments were carried on was planted in snap beans and tomatoes, about three-fourths devoted to beans. The total cost of production was \$71.20; the market price, \$284.40; profit, \$213.20.

An exhaustive paper on food conservation was read by Leonard Hatch of Washington, D. C. He offered suggestions for new dishes and new ways of preparing old ones.

R. B. Goodman, acting president of the National Lumber Manufacturers' Association, presented a paper on the subject of safety rules and organizations in lumber camps.

A paper on woods accidents in southern logging operations and their prevention was read by Henry Burr of T. H. Mastin & Co., Kansas City, Mo. This opened a general discussion of methods of preventing accidents.

H. C. Nix, general secretary of the Y. M. C. A., delivered an address on the welfare work in camps, with special reference to the colored laborers, and this was followed by general discussion.

There was a round table discussion of the responsibility of the logging superintendent for the prevention of fire waste in the woods. A number of other matters came up for discussion, among them being suggestions for next year's program.

The result of the election of officers had not been received at the hour of going to press.

Live Program for Wisconsin Meeting

The effect of liquor consumption on the efficiency of workers in lumber mills and logging cost and on the consequent production is a subject to be presented before the fall meeting of the Northern Hemlock and Hardwood Manufacturers' Association at the Hotel Pfister, Milwaukee, Wis., Friday, Oct. 26, by William T. Evjue, author of the prohibition referendum bill in the last Wisconsin legislature, and John Strange of Neenah, a Fox River valley manufacturer prominently identified with the dry forces of the state. This is the first time the subject will be discussed from such a standpoint by a lumber manufacturing organization and some interesting discussion if not practical recommendations are expected. It has been stated among the lumbermen that the operator in the dry town has an advantage over competitors in a wet town and facts and statistics are to be presented.

The fall meeting, usually occupying two days, will be crowded with some

BIG PLANS FOR THE BAY CITY MEETING

Enthusiasm is the word among northern salesmen and sales managers who are preparing for the big salesmanship congress at Bay City on November 16 and 17. Plans are shaping for a splendid program and for a social occasion which will fully rival that offered by the Merrill lumbermen at the first congress at Merrill, Wis., last year. The congress, under the joint auspices of the Northern Hemlock & Hardwood Manufacturers' Association and the Michigan Hardwood Manufacturers' Association, will be made up of the leading lights in northern lumber sales.

A big Wisconsin contingent is coming through Chicago and will have a special train running on the Michigan Central road, leaving Chicago at midnight on the fifteenth of November, getting to Bay City the following day. Needless to say, this will be the train to take for anyone going even in the general direction of Bay City on that date.

Complete program is given elsewhere in this issue.

fine addresses, of which probably the most important is that by R. B. Goodman of Goodman, Wis., on "The New Federal Revenue Bill and How It Affects Lumber Manufacturers." The analysis by Mr. Goodman is for the purpose of saving lumbermen costly errors in applying the new law to their business operations. A paper of equal importance as that of Mr. Goodman from an economy standpoint is that of Edward Hines of Chicago, who will discuss "National Terms of Sale." Mr. Hines is chairman of the national committee on terms of sale which represents all lumber producing sections and a meeting was held recently in Chicago, at which time definite terms of sale were recommended. Mr. Hines will present this new agreement with a view of its adoption or rejection by the association.

Secretary O. T. Swan of the association will report on "Government Lumber Requirements," which will be based on his recent visit to Washington, D. C., where he made an inquiry as to the prospects for an increased demand for northern hardwoods in government war preparations such as the construction of aeroplane parts, transport wagons and war material and ammunition containers. It is expected that some concerted effort will be made as the result of Mr. Swan's report to unite on ways and means of stimulating the use of such hardwoods through a demand for systematic and co-operative buying by some central department or bureau of the government national defense council.

Heads of the association's four bureaus will make exhaustive reports, H. H. Butts, of the bureau on statistical and educational information telling of market conditions as affected by the present war situation, of the hemlock bark situation and submitting statistics especially compiled for the meeting on all phases of the bureau's activities. A. L. Osborn of the traffic department will discuss transportation and freight matters growing largely out of the huge shipments in recent months of hemlock from the association mills to the army cantonment at Rockford, Ill. G. H. Chapman of the bureau on grades will discuss inspection work done at the companies' mills during past week and the lessons derived thereby, while M. P. McDouough of the bureau on trade extension will discuss the subjects of advertising and state fair exhibits for the exploitation of hemlock, maple and birch.

A final feature will be a talk by George C. Robson, chairman of the executive committee of the Northern Lumbermen's Salesmanship Congress, who will tell of plans for the congress to be held November 16 and 17 at Bay City, Mich., under the auspices of the Michigan Hardwood Manufacturers' Association and the Northern Hemlock and Hardwood Manufacturers' Association.

Splendid Program for Bay City Congress

O. T. Swan, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, acting for George C. Robson, of Merrill, Wis., general chairman of the executive committee of the Northern Lumbermen's Salesmanship Congress, gave out for publication the main features of the congress, which promises to be one of the biggest get-together meetings for lumbermen in every branch of the industry that has ever been held. The dates are November 16 and 17 and the place Bay City, Mich. Two committees of thirteen members each, from Wisconsin and Michigan under the direction of a general committee which besides Mr. Robson includes W. N. Wrape, Kneeland-Bigelow Company, Bay City, Mich., head of the Michigan committee and H. S. Dewey of the Edward Hines Lumber Company, Chicago, head of the Wisconsin committee, have been busy during the last two weeks preparing for the meeting. A special train is to be run from Chicago on Thursday night, November 15, carrying at least 100 and possibly 200 lumbermen from Illinois, Iowa, Indiana and southern Wisconsin points for the Michigan city. This train will return to Chicago on Saturday night. Reservations are to be made for the special train with Mr. Robson in care of the Kinzel Lumber Company, Merrill, Wis. It is being emphasized in every way possible that attendance at the congress is in no way limited except to members of the lumbering industry. If any man is a manufacturer, a producer, a retailer, a jobber, or an officer in any such lumbering organizations and in any manner connected with advertising, selling or producing lumber for any purpose whatsoever, he is welcome at the congress. Following are the topics and majority of the speakers who will feature the meeting:

2:00 P. M. November 16.
 Opening Remarks—Why the Necessity of These Conferences, by G. A. Robson, Kinzel Lumber Company, Merrill, Wis.
 The Lumberman's View Point, by J. C. Knox, Secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.
 The Industrial Consumer's View Point, by J. C. Knox, Secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.
 The Traveling Salesman's View Point, by (unassigned).
 3:00 P. M. November 16.
 Presiding Chairman, Chas. R. Abbott, Gunner Higgins Company, Cadillac, Mich.
 "Whose Ox Is Gored?" by H. H. Butts, Park Falls Lumber Company, Park Falls, Wis.
 "The Relative Strength of Hemlock and Hardwood," illustrated with lumber slides by O. T. Swan, Secretary of Northern Hemlock and Hardwood Manufacturers' Association, Oshkosh, Wis.
 "The Merrill Conference from a Michigan View Point," by J. C. Knox, Secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.
 "The Industrial Consumer's View Point," by (unassigned).
 2:00 P. M. November 17.
 Presiding Chairman, H. S. Dewey, Edward Hines Lumber Company, Chicago.
 "The Manufacturer's View Point," by R. B. Goodman, Goodman Lumber Company, Goodman, Wis., Vice president of the National Lumber Manufacturers' Association.
 "The Wholesaler's View Point," by E. M. Holland, Carter Holland Lumber Company, Grand Rapids, Mich.
 "Moulding the Demand," by J. B. Crosby, Crosby Agency, Chicago.
 "A New Version of Lumber Salesmanship," by (unassigned).
 The following parties will probably handle the unassigned subjects:
 "How We Do It at Cadillac," W. L. Saunders, Cadillac, Mich.; "The Retailer's View Point," Robert K. Jardine, Grand Rapids, Mich.; "The Evolution of Hardwoods," Godfrey Von Platen, Von Platen Lumber Company, Grand Rapids, Mich.; "The Industrial Consumer's View Point," E. K. Pritchett, Grand Rapids, Mich.; "A New Version in Salesmanship," Julius Seidel, Julius Seidel Lumber Company, St. Louis, Mo.
 Lumbermen of the Saginaw valley will assist those of Bay City in preparing a banquet for Friday evening at which time several brilliant after dinner talks will be present and other entertainment will be furnished. Those will include Douglas Malloch of Chicago, Al Flourney of the Virginia & Rainey Lake Lumber Company, Rasmus Hansen of Salling Hansen Company, Grayling, Mich. The spare moments before and after sessions will be devoted to inspection of some of the plants at Bay City, Mich., and other interests.

Memphis Members in Big Bond Drive

The Lumbermen's Club of Memphis, at its semi-monthly meeting held at the handsome home of the Colonial Country Club Saturday, October 13, following intensely patriotic addresses by John W. McClure of the Bell-grade Lumber Company and S. B. Anderson of the Anderson-Tully Company, unanimously adopted the following resolutions:

RESOLVED, That we, the members of the Lumbermen's Club of Memphis, individually and collectively, pledge our loyal support and assistance in placing bonds of the Second Liberty Loan and thus mobilize the forces of the lumber industry of this section solidly behind the President, Congress and the boys in the army by purchasing bonds to the extent of our ability and by encouraging our employees and laborers to take their proportion of these bonds; and be it further

RESOLVED, That a strong committee be appointed to carry on this work.

In accordance with the foregoing, President May has named the following committee, which is composed of the heads of some of the big lumber organizations having headquarters in Memphis and which embraces some of the most prominent lumber manufacturers and distributors in this part of the country:

James E. Stark, president of the Southern Hardwood Traffic Association, chairman; R. L. Jurden, president of the Commercial Rotary Gum Association; Walker L. Wellford, president of United Coopers Industries of America; H. B. Weiss, president of the Gum Lumber Manufacturers' Association; W. H. Russe, vice-president of the American Oak Manufacturers' Association; M. F. Hannahs, secretary of the Hardwood Dimension Manufacturers' Association; S. B. Anderson, president of the Anderson-Tully Company; J. V. Rush, Moffett, Bowman & Rush; J. D. Allen, George C. Ehmman & Co.; S. M. Nickey, Green River Lumber Company; O. M. Krebs, McLean Hardwood Lumber Company; Rudolph Sondheimer, E. Sondheimer Company, and W. H. Bonner, J. H. Bonner & Sons, all of Memphis.

Owing to the shortness of time before the campaign closes, the members of this committee are working with a full head of steam and are meeting with results that are highly encouraging. The lumbermen have responded enthusiastically to every call made on them by the government since the declaration of a state of war with Germany and they are determined that they shall not fail President Wilson and his administration in the vital matter of helping to provide the necessary funds to "make the world safe for democracy." They are subscribing liberally themselves and are likewise obtaining generous responses from their employees.

The three per cent government tax to be levied on lumber freight bills will become effective November 1 and the club empowered the river and rail committee to work out a basis which will serve to establish a uniform practice among the lumbermen in handling this item. One firm suggested that, instead of quoting lumber "F. O. B. cars Chicago," it was using the terms: "Freight allowed to Chicago." It expressed the belief that this would be a good way to show that the shipper pays only the freight and that the buyer pays the war tax and other incidental expenses. However, the committee will consider the matter and report back to the next meeting.

ing. It appears quite clear that the buyer will have to pay the war tax on these freight bids.

A committee of five was appointed to come from the lumbermen their share of the cost of securing the location camp for Memphis, which is located at Millington, a few miles north of this city. The Chamber of Commerce guaranteed the entire amount and is seeking reimbursement from the various industries and lines of business.

Col. S. B. Anderson, chairman of the law and insurance committee, who at the previous meeting recommended using the shortest possible form in making declarations on invoices covering lumber, showing that it was manufactured at plants complying with the provisions of the federal child labor law, said that, upon further investigation, he advised using the longer forms.

Four new members were elected at this meeting, as follows: John L. West, Jorgensen-Bennett Manufacturing Company, Memphis; S. W. Sterling, Northern Ohio Cooperage & Lumber Company, Parkin, Ark.; F. J. Roys, vice-president White River Lumber Company, Memphis, and E. O. Johnston, Thane Lumber Company, Arkansas City, Ark. Two new applications for membership were filed at this meeting and Secretary Heuer says there are three to be filed at the next meeting. When all these are elected, including one at the previous meeting, the total additions to the membership of the club for the fall season will be ten.

It is announced elsewhere in this issue of *Hardwood Record* that the Lumbermen's Club of Memphis will be host on the evening of January 19 to the lumbermen who attend the annuals of the following associations from January 15 to January 18, inclusive: American Oak Manufacturers', Southern Hardwood Traffic, Southern Alluvial Land and Gum Lumber Manufacturers'.

This meeting was characterized by unusual enthusiasm. The attendance was full. A delightful luncheon was served. President Ralph May occupied the chair.

With the Trade

Hoover Joins Utley-Holloway Force

H. G. Hoover who has been well-known in lumber circles in different parts of the country for a good many years has just accepted the position as sales and office manager of the Utley-Holloway Company, Conway building, Chicago. Mr. Hoover is considered one of the best office men in the business and with the long experience in all of the features of lumbering, starts his new work with exceptional prospects.

Mr. Hoover started with the Leavitt interests, in the old Wisconsin Oak Company, Chicago, way back at the time of the St. Louis Fair. He was with the Wisconsin company through its various operations up to the time it was merged into the Leavitt Lumber Company. He spent some time at the company's mill at Frederick, Wis.

Following a six years' connection with the Leavitt interests, Mr. Hoover was associated with the Estabrook-Skeele Lumber Company at Chicago for six months, and then entered the office of the Griffen H. Deeves Lumber Company, where he handled the office end of the business with notable success. He was with Mr. Deeves for some time until about five years ago when he accepted the position of assistant secretary of the Hardwood Manufacturers' Association of the United States. He worked in this capacity for a year and then returned to Mr. Deeves'

office where he remained up to a few months ago when he was compelled to go South to handle the cleaning up of the estate left by his father at Springfield, Mo. Mr. Hoover returned to Chicago a few months ago and joined the Utley-Holloway forces about the middle of the month. The enforced rest has done wonders with Mr. Hoover's health and he starts his new work with all the energy in the world.

This new acquisition will give Mr. Utley and Mr. Holloway the time they have long wanted for uninterrupted attention to the outside work of the firm. This is particularly essential these days with the new demands due to the rapid expansion of this coming institution. The company is building a large new mill at Clayton, La. Mr. Holloway is giving a great deal of his time to the completion of the plant, laying of track and putting the operation in shape for an early run.

Mr. Hoover will have associated with him in the office Sherman C. Amnden, who joined the Utley-Holloway force several months ago. He served in an important capacity with a representative advertising agency in Chicago prior to going with the Utley-Holloway Company.

Incidentally, this company because of the rapid growth of its business, has just taken on much more extensive quarters in the Conway building and will have moved into these new rooms within a very short time. They are located on the tenth floor.

W. H. Weller Joins Huntington Company

W. H. Weller, formerly secretary of the Hardwood Manufacturers' Association of the United States, and recently in the hardwood and cypress business at Cincinnati, announces that he has arranged to join the forces of Offutt & Boice at Huntington, W. Va., on November 1. He will take charge of the selling, and in fact have entire charge of the office.

The company recently organized and will engage quite extensively in the manufacturing and wholesaling of hardwood lumber. It has already started one mill in Boone county, W. Va., and will have another under way in a few weeks. The Boone county mill is cutting on a virgin tract of oak and poplar and is now making out about 40,000 feet a day.

Both Mr. Offutt and Mr. Boice are well known in the hardwood industry. Mr. Offutt for the past eight years has been vice-president and general manager of the Rockcastle Lumber Company at Huntington, which company has recently cut out the last of several thousand acres of its holdings in eastern Kentucky. Mr. Boice has operated extensively in Virginia and is now building a band mill with dry kilns at Hartford, Tenn.

Smith Milton Passes On

On Sunday, October 14, T. Smith Milton, secretary-treasurer of the Churchill-Milton Lumber Company, president of the Louisville Hardwood Club, and director of the Southern Hardwood Traffic Association, one of the South's most prominent and progressive lumbermen, died following an illness of malaria and typhoid contracted while visiting the company's southern mills. He went South six weeks ago, but after staying there a short time was forced to return to Louisville, where he was confined to his bed. On account of no improvement in this condition, the physicians, who are among Louisville's ablest, had him removed to the Jewish hospital, but despite all that could be done he passed away at 1 p. m. Sunday.

Mr. Milton began his business career with R. M. Cunningham in the yellow pine business immediately after leaving high school, and after a number of years became associated with Selden-Breck Construction Company as lumber purchasing agent. He left the latter concern to organize the Milton-Peter Company, manufacturer of table tops and slides. Just

H. G. HOOVER, SALES MANAGER,
UTLEY HOLLOWAY COMPANY, CHICAGO

THE LATE T. SMITH MILTON
OF LOUISVILLE, KY.

W. H. WELLER, SALES MANAGER,
OFFUTT & BOICE, HUNTINGTON, W. VA.

as his business was beginning to thrive it was destroyed by fire. He then became identified with the Louisville Point Lumber Company as sales manager.

In 1914 he, with John Churchill, organ of the Churchill-Milton Lumber Company. Their first experience was as wholesalers, operating a yard at New Albany, Ind. They later contracted for the output of the Jeffery mill at Gossage, La. In 1915 they purchased a mill at Glendora, Miss., but as this mill did not afford them sufficient lumber they erected a double band mill at Greenwood, Miss., which was placed in actual operation last spring.

Mr. Milton at all times championed anything that he thought would promote the interests of the lumber industry. It was entirely thru his efforts that a branch of the Southern Hardwood Trade Association was established at Louisville in 1916. He was the first chairman of the local organization. At the annual meeting of the Louisville Hardwood Club last November he was unanimously chosen as its president. He was also a prominent member and took active part in the Gum Lumber Manufacturers' Association, American Oak Manufacturers' Association, National Hardwood Lumber Association, and National Wholesale Lumber Dealers' Association.

Aside from his activities in the lumber trade, he took great interest in sports, being director of the Louisville Athletic Club and Louisville Boat Club. He was conceded to be one of the best automobile men, oarsmen and trapeze artists in this section in spite of the fact that he was slightly crippled and spent his early life on crutches. As a member of the boat club he developed into a crack swimmer, pulled the best oar in the club and was an expert tennis player.

His happiest moment was when he was doing a favor for some one else; in fact, his entire life was given up to following the example of the good samaritan. To know Smith was to love him, and because of his loyal devotion, never tiring faithfulness and his sunny disposition, he was held in the highest esteem by all who knew him. His loss will be mourned by the whole trade.

Many condolences have been received by both the firm and Mrs. Milton. Employees of the mill at Glendora, Miss., to show the high esteem in which he was held by them wired as follows:

Accept our most heartfelt sympathy. We feel that we have lost one of our greatest friends and that what we have learned thru him by his untiring example will benefit us the balance of our lives.

The Gum Lumber Manufacturers' Association wired as follows:

Accept our sincere sympathy in your loss of Smith Milton, who was the finest type of gentleman and an honest, upright and progressive business man. The entire lumber fraternity mourns with you.

The Louisville Hardwood Club attended the funeral in a body, each firm being represented. Many magnificent floral designs were sent by various lumber organizations and firms throughout the United States.

The deceased was thirty-eight years of age, and a son of the late Mr. and Mrs. Scott Milton. He is survived by only one close relative, a cousin, Col. W. A. Milton, and his wife, Mrs. Elizabeth Smith Milton.

Appreciative resolutions were adopted at a meeting of the club on Tuesday evening, October 16, one day after the funeral:

WHEREAS, The members of the Louisville Hardwood Club being deeply grieved at the untimely death of our beloved friend and president, Smith Milton, endeavor to record our appreciation of his congenial disposition, untiring faithfulness, unrestrained progressiveness and constant devotion, and the high esteem with which we shall always remember him, and

WHEREAS, It is most unfortunate that he should be called to the great beyond before he could enjoy any of the fruits of his unceasing labor, and

WHEREAS, Knowing how well he emulated the example of the good samaritan, and knowing that no additional wreaths of glory can be added to his brow by anything we may say,

HOWEVER, BE IT RESOLVED, That the Louisville Hardwood Club, in convention assembled, mourn the loss of our departed brother and that these resolutions be spread on the minutes and copies thereof be sent our friend's wife and the Churchill-Milton Lumber Company, extending to them our deepest and sincerest sympathy at this hour of bereavement.

Shippers Get Relief by Personal Appeal

The seriousness of the railroad car situation was responsible for a large delegation of hardwood men at Baltimore, Md. Some of the biggest shippers in West Virginia called on Vice-President Thompson of the Baltimore & Ohio two weeks ago to make representation with respect to the inadequacy of the transportation facilities. An extended interchange of views followed, with the result that the millmen obtained from Mr. Thompson a promise that the company would afford all the relief possible under existing conditions. Since then cars have been coming forward in considerably increased number and the congestion in the way of hardwood lumber has been to some extent relieved. The delegation included Mr. Curtin of the Pardee & Curtin Lumber Company; Mr. Richards of the Fenwick Lumber Company, Fenwick; Mr. Brewster of the Sun Lumber Company, Weston, and Mr. Campbell of the Birch Valley Lumber Company, Allingdale. There were about twenty prominent shippers in the delegation.

Lumberman Entertains Co-Workers

Bert Hanna, vice-president of the C. W. Leech Lumber Company, Detroit, Mich., entertained the wholesale and retail hardwood lumber trade of Detroit as well as a few personal friends outside of the lumber business, at his splendid new home at 71 La Salle Gardens on Monday night. The occasion was a well arranged dinner. Appropriate favors and decorations were in order.

An informal meeting, at which Charles W. Leech acted as toastmaster followed in the luxurious living room. Mr. Leech paid great tribute to Mr. Hanna's successful career. This was followed by a number of other

remarks. The guests were entertained during the evening by well-known local musical talent. Mrs. Hanna acted as hostess and was assisted by Mrs. Leech and Mrs. Dessert.

Veneer Plant Changes Hands

The veneer plant at Vero Beach, Fla., formerly owned by the Southern Wood Measure Company of New Albany, Ind. The purchasers announce that the plant will be put in operation in the near future.

New Wood-Bending Device

A company has been organized at Parkersburg, W. Va., to install a plant for bending wood. A charter has been granted the incorporators who are well known residents of Parkersburg as follows: P. G. Davis, L. L. Miller, W. S. Geary, P. D. Neal, and A. R. Adair. The company is capitalized at \$50,000 and will have its principal office at Parkersburg.

New Cigar Box Company

A company has been organized at Grand Rapids, Mich., with \$40,000 capital, to manufacture a humidor cigar box. Officers of the company are: Walter Torr, president; Thomas G. Alvord, vice-president; E. W. Aument, secretary. The officers and John D. Case, Joseph Renihan, Frank J. Coo, and James P. Knowlton comprise the board of directors.

New Corporation Formed

A new corporation under the name of Stark Lambert Lumber Company, with headquarters at Beaumont, Tex., has been organized. This corporation absorbs The Orange Hardwood Lumber Company of Orange, Tex. The principals of the new corporation were the owners of The Orange Hardwood Lumber Company.

A Correction

The last issue of Hardwood Record contained a notice to the effect that James Kennedy & Co., Ltd., of Cincinnati had changed their local manager. By error this was printed as "Jones." Kennedy & Co., Hardwood Record recently received a letter calling attention to the mistake.

Forty Million Feet Short Run for This Company

A news item got into the last issue of Hardwood Record stating that a 40,000,000 foot tract of hemlock recently purchased by the J. S. Stearns Lumber Company, Odanah, Wis., would keep it running for two years. Hardwood Record has received the following characteristic letter from F. J. Darke of this institution which very plainly states that the item in question was in error:

Your postal of the 11th, calling attention to notice on page 41 of your issue of the 10th is at hand.

We were the successful bidders on an odd lot of 40,000,000 feet hemlock on this reservation but inasmuch as we run 60,000,000 feet or over from this mill each year, if we devoted two years to that lot, we would have more time to go fishing than the writer has experienced in his past life.

Rieha-Scherer

Saturday is not usually chosen as a marriage day, but it was selected by Miss Ellen Gertrude Scherer, daughter of the late William C. Scherer, senior member of the firm of William C. Scherer & Co., Baltimore, Md., as the day for her wedding to Edward L. Rieha. The ceremony took place at Corpus Christi Catholic Church. Miss Alleen Scherer, sister of the bride, and Miss Marie A. Stack of Baltimore were among the bridesmaids, and George P. Zouck was best man. A small reception at the home of the bride's mother followed.

Warder-Ray

Miss Ida Jane Warder, daughter of Dr. and Mrs. John I. Warder of Weston, W. Va., was married to Robert J. Ray, a member of the Sun Lumber Company, Weston, on Wednesday, October 17. The ceremony was performed by Rev. H. B. Lee, Jr.

Mrs. Ray is a very prominent member of West Virginia social circles and is considered one of the most beautiful young women in West Virginia.

Mr. Ray is also prominently connected with the business and social life of Weston. It is needless to say that sunshine and happy days will be prominent in the future lives of this couple.

They left for a honeymoon trip of unknown extent and direction and will be at home at Weston after November 1 at 132 East First Street.

W. C. Bartlett Joins Charleston Company

W. C. Bartlett for several years sales manager for the American Column & Lumber Company, St. Albans, W. Va., announces that he has become a member of the Thomas Hall Lumber Company of Charleston, W. Va., and will look after the sales end of the business of the Charleston office.

This announcement follows a recent notice to the effect that S. O. Moore, also formerly sales manager for the American Column & Lumber Company, preceding Mr. Bartlett, has taken charge of the northern territory for the Thomas Hall Lumber Company, he having headquarters in Detroit, Mich.

Mr. Hall is the third member of the Thomas Hall Lumber Company who had past association with the American Column & Lumber Company. He was connected with this firm for several years in various capacities and received a most excellent training.

The Thomas Hall Lumber Company is manufacturing hardwoods extensively in West Virginia. It will begin cutting on a new 20,000,000 foot tract at Marmet, W. Va., very shortly. This is on the main line of the Chesapeake and Ohio Railroad. The company is now completing a single band mill at Marmet which will be turning over about the first of November.

In addition, the company is to erect a tract on the Laurel Creek branch of the Chesapeake and Ohio, and the Stark operation of the American Lumber Company. The tract will take three or four years to cut over.

The company controls interests in quite a number of small mills at different West Virginia points and is making a very substantial amount of headway in West Virginia operating circles.

New Operation Commenced

The Blue Ridge Timber Company, recently organized and incorporated under the laws of North Carolina, with an authorized capital stock of \$100,000, has just started to manufacture a very high class tract of timber at Max Meadows, Va., on the main line of the Norfolk & Western Railway. The general offices of the company will be at High Point, N. C., from which office the sale of several mills in western North Carolina will be handled. The output of the Max Meadows mill will be taken care of from that office. The company also proposes to start operations in Surry county, North Carolina, within the near future.

The stockholders and officers of the company are as follows: Lee A. Briles, president; E. C. Slater, vice president and general manager, and R. H. Wheeler, secretary-treasurer.

The management of this business is in the hands of a southern lumberman who has spent many years in the management of hardwood operations in several southern states and in the various stages from the "ground hog" to the most modern double band, and the new company is entering the field under very favorable conditions.

Charles Fremont Braffett

Charles Fremont Braffett, vice president of the Simonds Manufacturing Company, located at 1500 S. Western avenue, Chicago, and head of the Upton Machine Company, St. Joseph, Mich., killed himself in his home, 3001 South Seventh avenue, La Grange, Ill., on Thursday evening, October 18. Death was due to his inhaling gas.

While no note of explanation was left, the coroner's jury decided the day after that the deceased had made away with himself on account of despondency over ill health.

Mr. Braffett leaves a widow, a son, John W. Braffett, and a daughter, Mrs. Katherine D. Pratt of La Grange.

Mr. Braffett was a Mason and a member of the Hinsdale Golf Club. He was sixty-one years of age and had a long career in business manufacturing circles, being very well known in many parts of the country.

Masonic services for immediate friends and relatives were held at the late residence at La Grange on October 21 at 11 o'clock in the morning.

Pertinent Information

Carriers to Again Ask 15 Per Cent Increase

Hardwood interests have been represented recently at two or three hearings and conferences at Washington before the Interstate Commerce Commission by J. H. Townsend, secretary of the Southern Hardwood Traffic Association, and J. V. Norman of Louisville, attorney for the association.

They were present when the railroad representatives told the commission the other day that they would like to present an application for permission to file tariffs increasing commodity rates generally throughout Official Classification Territory by 15 per cent, as the commission rejected a similar proposed increase in deciding the original 15 per cent advanced rate case and because the railroads claim that their revenues are decreasing and their expenses increasing. Capt. E. A. Selfridge of the California Redwood Association and member of the lumber committee, Council of National Defense, also attended this conference.

The commission announced late on Monday that it had reopened the case and set November 5 in Washington for hearing. Incidentally the commission opened the way for southern and western roads to get in their claim, which they are expected to do, for advances in their parts of the country, which would make the proposed freight rate increases nation-wide, if they are approved by the commission.

The commission holds that the eastern railroads' suggestion that hearings recently set for the 15 per cent case here on November 1 to be postponed 60 days to give the carriers time to prepare their applications for permission to file revised tariffs proposing a general 15 per cent rate advance, was "in error," in view of the carriers' contention that their financial situation is such that they need immediate relief.

It is understood that shippers interested in the 15 per cent case will be notified of the hearing November 5 and that all parties will be given ample time to present evidence. A decision on the merits of the proposition is not expected for some weeks.

Enormous Increase in Freight Traffic

In the month of July the railways of the United States handled 48 per cent more freight traffic than in July, 1915, and 49 per cent more than in July, 1914, says the Railway Age Gazette. The Railroads' War Board has just issued statistics showing that the ton mileage of freight handled in July, 1917, was 20.2 per cent more than it was in the same month of 1916. This increase in the traffic handled reflects a remarkable performance in view of the fact that the traffic of 1916 far sur-

passed all records up to that time. It should be borne in mind that there has been almost no increase in railway facilities within the last two years.

Baltimore Uncertain as to Export Permit Office

It had been hoped as it this port would not get a branch office of the Exports Administration Board as soon as had been expected. The latest information received by Robert Beaham, secretary of the Merchants and Manufacturers Association, is that Boston and Philadelphia will receive attention before this city is looked after, and it is intimated that some time may elapse before Baltimore receives attention. This delay is regretted especially by the exporters of hardwoods, who had entertained hopes that they would soon have accessible an office from whom could be obtained permits to make shipments to Europe. Information has been received at late that considerable space for the shipment of lumber would be available, especially on French steamers, and the exporters desired to take advantage of the opportunity. Of course they can get the necessary documents at Washington, but this always requires a trip to the capital and entails delay that may prove serious. Now, when there is a chance it must be acted upon without delay, and there is not always time to go to Washington, which requires the greater part of the day without any real certainty that the object of the trip will be accomplished. The exporters here feel that the importance of the port entitles them to a branch office, and they especially desire that the representative at the branch be empowered to issue permits under which shipments can be made by way of other ports as well, since it is not always feasible to make shipment by way of Baltimore.

Wood Exports in July

Figures have just been published showing the exports of lumber and other forest products from the United States in July last. A summary of these figures follows:

	Value 1916	Value 1917		Value 1916	Value 1917
Round logs	8,952,237	8,765,117	Redwood	88,321	62,412
Firewood	13,744	22,979	Spruce	504,274	162,487
Square logs	368,106	264,138	All other lumber	312,258	76,106
Railroad ties	266,295	223,707	Doors, sash,		
Fir lumber	254,522	95,327	blinds	19,542	13,614
Gum lumber	37,027	69,752	Wooden furniture	236,045	233,900
Oak	199,439	307,723	Handles		69,413
White pine	108,913	48,620	Barrels	86,023	41,135
Longleaf pine	654,229	371,047	Box shooks	192,746	106,584
Shortleaf pine	2,014	496	Barrel shooks	182,763	36,830
Other pine	168,355	168,025	Staves	210,445	297,363
Yellow poplar	51,127	31,360	Heading	23,874	15,794
			House trimming	27,838	26,143
			Woodenware	24,466	13,169

Trade Opportunities

Washington has received a report from United States Commercial Attaché Védits at Paris that the French minister of the Interior has invited offers from manufacturers and dealers for 20,000 wooden bed frames in lots of 500, each concern to be permitted to furnish not over five lots, and various other furnishings, etc., for home and other buildings in French territory from which the Germans have been driven.

A special agent of the Department of Commerce has transmitted the name of a person in Ecuador who is interested in knocked down furniture.

Clear-cut Analysis of War Tax

The income and excess profit tax legislation the war tax of 1917— is given a very clear and succinct digest in a book recently by the National City Bank of New York City. The book is entitled "Digest of the Federal Income and War Excess Profits Tax Laws." It covers the entire question in a way that makes it possible for users of this booklet to arrive at their proper standing under the tax law and feel perfectly confident that they are working in the right direction.

We understand that a copy of this booklet is available to anybody who will apply for it.

Scientific Lumber Drying

Advance notices announce that a scientific treatise on kiln drying lumber will soon come from the press of the J. B. Lippincott Company, Philadelphia. The author is Harry D. Tiemann of the Forest Products Laboratory, Madison, Wis. He is well known to the lumber trade as a scientific investigator of the first order, and his book may be depended upon as high authority on the seasoning of lumber.

More Wood to Be Used in England

Reports reaching the offices of the National Lumber Manufacturers' Association, Chicago, indicate that there will soon be an increase in the use of wood in England. During the past two years England has been living very largely upon its fixed capital so far as wood is concerned, and little has been done to make repairs or erect new buildings. The railroad companies put off necessary work in the hope of better conditions but this cannot be longer postponed. The construction of workmen's cottages must also go ahead since many munition and other workers are homeless while the great increase in shipbuilding and ship repairing is bringing an inevitable demand for more ship timber. At the same time the requirements of the British Army for packing boxes and cases, furniture, light railways, aerodromes, and other buildings, make a constant demand for lumber.

The conclusion of the English timber firms is, therefore, that the time has arrived when a larger timber consumption must take place, and that the government will act wisely if it allows a larger importation of foreign stocks.

Selling Lumber by the Piece

Suggestion was put forward at a committee meeting of the National Lumber Manufacturers' Association in Chicago on October 10 that in some instances it might be more advantageous to sell lumber at retail, by the piece or by the hundred feet, than by the thousand, as the custom now is. It was argued during the discussion which the proposal called forth that a price by the thousand feet sold is high to the man who wants only a few feet or a few hundred feet, but in a total price, where quantities of exact quantity wanted it would not seem so high. The direct proportion between the small bill of lumber wanted and the price for a thousand feet is not always immediately apparent to the prospective purchaser, particularly when his wants are small.

The only action taken was to refer the matter to the new trade extension committee. It is needless to state that customs long established cannot be easily changed; yet when change is advantageous it can be brought about. In the discussion in the committee's meeting differences of opinion developed as to the best means of putting the new system of quotations into effect, in case it should be decided to do so. Some felt that the start in quoting in this fashion could best be made by the retail dealer, while others felt that were the manufacturers to begin quoting in this fashion to retailers, the latter would immediately pass it on to the public, and the custom would thus become established.

Labor Troubles in Evansville Factories

The Industrial Workers of the World are trying to get a foothold in Evansville, Ind., as evidenced by a strike among the workers in the furniture factories in that city which was called on Thursday, October 18, when many of the wood working plants were closed down. For some time the furniture workers in Evansville have been quietly organizing a union that is known as the Workers' International Industrial Union, and this is said to be a part of the Industrial Workers of the World. The strikers say they have over 2,000 members. The workers made a demand of the manufacturers for a fifty-hour work week and an increase in wages amounting to about fifteen per cent. The manufacturers paid no attention to the demands. When their demands were ignored the strikers agreed to walk out and many men who had not joined the union also quit their jobs. The manufacturers are taking matters easy and are now making necessary repairs on their plants while they are closed down. They say they will treat with their men and raise their wages as individual cases would warrant, but that under no circumstances will they treat with a union that has no standing and which is known to be a part of the Industrial Workers of the World. In some factories in Evansville the workers are now receiving more money than they would get if their demand for more money was granted them. The men demand a fifty-hour week, but want pay for sixty hours or more. The strikers have no means of support and have appealed to the working people of Evansville for help, but help is not expected very soon for the reason that the Evansville Central Labor Union and many of the other unions of that city have recently passed resolutions denouncing the Workers' International Industrial Union, saying that it is affiliated with the notorious Industrial Workers of the World. Evansville manufacturers say that they expect to continue to fill their orders promptly and in their opinion the trouble will soon blow over and the strikers will be glad to come back.

Forest Service Made Over to War Work

Acting Forester W. L. Hall says that over 160 persons in the Forest Service have gotten leave for military service besides temporary employees, such as forest guards, fire fighters, etc. The service is pushing the Liberty Bond campaign for all it is worth and about \$10,000 has been subscribed in the Washington office alone.

The war, Mr. Hall says, has caused many changes in the plans of the Forest Service. One is a slackening up of the work of purchasing forest lands in the Appalachian mountains under the Weeks forestry law. Mr. Hall says that this is being confined to filling in gaps in the new eastern and southern national forests, because the Forest Service is shorthanded and the department of justice staff is so busy working on the titles of land for military and naval purposes that it does not have time to clear the title of forest land. However, a meeting of the National Forest Reservation Commission will be held here in December to consider such land purchase questions as may be ready for action.

Mr. Hall says that a good deal of the scientific and investigative work that could wait has been practically discontinued during the war. This includes much of the forest planting work and forest nursery work, and general studies made of the growth of timber and other scientific matters connected with forestry.

On the other hand, the grazing studies have been increased largely with a view to immediate utilization of the range in the national forests to the fullest extent. The Madison, Wis., Forest Products Laboratory is understood to be loaded up with war work, much of it new.

The national forests are doing their share of work to help the country in war, it is stated. At the Forest Service it is said that among the national forest products going largely into war uses at this time are locust treenails from the southern Appalachian forests, for government wooden ships; Douglas fir lumber used in shipbuilding on the west coast; western yellow pine from far western and southwestern national forests, used largely in making boxes for the war department; oak cut in the Arkansas national forest and the Appalachian government forests, entering into material for submarine chasers.

Wood as Structural Material

Some of the best of the wood building books published some fifteen years ago with a book entitled "Wood." The title of the volume which has just appeared is "Wood and Other Organic Structural Materials." The materials other than wood which find places in this book are gum and rubber, and there is a chapter on each of paint, varnishes and oils in their useful application to wood. Seasoning and treatment to hinder decay also find places in its pages.

Wood kinds by far the most important place. Those woods which are or should be familiar to the builder and the dealer are listed and described, and facts concerning their physical qualities are given, their abundance or scarcity, weights, colors, and other characteristics.

The book is not a new edition of Mr. Snow's work on wood published in 1903. This is a new work, much more complete than that, but to some extent it follows the same general plan. So far as the field can be covered in the limited space of 450 pages, this is a cyclopedia on wood as this material is used at the present day. The price of the book does not appear in the publisher's prospectus, but those who want a work of real value along the line covered by this book will doubtless feel that they have received the worth of their money if they buy the book. The author is a member of the American Society of Civil Engineers, and dean of the school of applied sciences, New York University.

A New Book on Saws

The D. Van Nostrand Company, 25 Park place, New York, has brought out a book under the title, "Saws: Their Care and Treatment." It contains 268 pages, a large number of diagrams and other illustrations, and retails for \$2.50. The author is Harry W. Durham, and it is stated in the preface that the book was written primarily for saw users in England and the dependencies. It is apparent from the text that the author drew much of his material from American sources. Some of the illustrations and descriptions are supplied by well-known saw manufacturers of the United States.

There is a general similarity in the work to be done by saws which cut wood, no matter in what country they happen to operate, and for that reason a scientific work on saws in England ought to be valuable to saw users in the United States. After giving a very brief historical account of saws, the following topics are more fully discussed:

- Particulars of reciprocating saws;
- Particulars of circular saws;
- Sharpening saws by hand filing;
- Sharpening saws by machines;
- Setting the teeth of saws;
- Hammering and tensioning circular and reciprocating saws;
- Sharpening large band saws.

Following these topics, there are discussions covering topics of miscellaneous kinds, such as doctoring band saws, sawroom practices, saw packing and guides, power to drive sawing machines, and many other topics. It thus becomes apparent that the field is well covered. The author claims to have had twenty-five years of experience in handling saws. The book is well written and is printed in clear type on good paper.

Tests on Kiln-Drying Propeller Stock

The testing of kiln drying of woods for airplane stock is deemed of such importance that the Official Bulletin has issued a special announcement on the subject. According to this, spruce can be used for aircraft production after kiln-drying without injury. It is hoped that similar results can be obtained with kiln-dried ash, oak, mahogany and other hardwoods, many of which are being tested. Following is what the Official Bulletin, issued by the Committee on Public Information, says of the tests:

When the United States entered the war the need for wood to build airplanes quickly created a difficult problem. Most of the air-seasoned wood available had been bought for airplanes for the allied nations abroad. Thorough air seasoning of such stock requires from one to three years, according to the size and kind of wood. Kiln-dried stock under the methods ordinarily used has frequently proved unsatisfactory and for that reason airplane manufacturers have been reluctant to use it. If the needs of the fighting forces were to be met adequately and without prolonged delay, it was essential that methods of conditioning should be available in which full confidence could be placed.

Long before this situation developed the forest products laboratory of the Forest Service, at Madison, Wis., had been making a scientific study of the drying of wood, and had developed a method of drying which has been very successful with all the woods tried. Several kilns have been built at the laboratory for experimental purposes and a number of demonstrations made in commercial kilns. Ash and spruce are the woods most in demand for airplane construction, and anticipating the present situation the Forest Service secured a shipment of partially air-seasoned ash and spruce plank for preliminary tests.

This material was kiln dried without injury. Later thoroughly green Sitka spruce, white ash (northern and southern), white oak, Douglas fir, western white pine, and mahogany were secured in the log testing. The spruce and ash logs were cut up and the green material from each species divided into three matched groups. One group of each species was tested green, another has been set aside to be tested when it has air-dried, and the third group was kiln-dried, trying several methods, and then tested.

Only the results of tests on the spruce have so far been analyzed. Comparison with standard tests which had already been made shows that Sitka spruce can be kiln dried from the green condition with no more, perhaps less, injury to its mechanical properties than by air seasoning. Definite specifications have been prepared for kiln-drying spruce green from the saw for airplane construction, and, if rigidly enforced, they will insure kiln-dried stock of this species equal to air-dried stock.

A preliminary study of propeller construction has shown the need of such information on propeller woods. The testing of the ash and other species now on hand, which include several propeller woods, is being pushed as rapidly as possible, and there seems reason to expect as favorable results as for the spruce.

Building Permits for September

The monthly statement of building permits, issued in the principal cities throughout the United States, has recently acquired a new and more important significance, because of the index it furnishes of the extent in which the so-called "usual business" of the country is being maintained, in the face of the strenuous military and naval efforts which the nation is making. Viewed in that light, the situation that is presented is not without its comforting aspects, that is, the shrinkage is less than might have been expected. If the dismal reports that are made concerning the building industries in many business centers were to be accepted at par, the condition of things would be distressing. But it is far from being so bad as that.

The official reports of the building permits issued during September in 115 principal cities, as received by the *American Contractor*, Chicago, total \$51,751,484, as compared with \$70,980,161 for September, 1916, a decrease of 27 per cent. The comparative decrease in August was 33 per cent, so that by comparison the situation appears to be slightly improving. The actual decrease in the volume of work is somewhat in excess of 27 per cent, however, inasmuch as costs are greater than a year ago.

Of these 115 cities, 38 show gains, a few of them decisive gains. Among them is New Haven, Conn., where the constructional activities of Yale University have been very conspicuous recently. Cleveland shows a gratifying expansion, due to the growth of its industries. New York City has greatly reduced the unfavorable showing it has been making in recent months. Industries are thriving in the various centers, largely to the degree to which they are participating in the manufacture of supplies used in our national emergency.

The total number of permits issued in these 115 cities for the month was 18,401, compared with 27,244 for September, 1916, a decrease of 30 per cent.

Statement of the Ownership, Management, Circulation, Etc., Required by the Act of Congress of August 24, 1912,

OF *HARDWOOD RECORD*, published semi-monthly at Chicago, Ill., for October 1, 1917.

State of Illinois, }
County of Cook, }

ss. Before me, a Notary Public, in and for the State and county aforesaid, personally appeared E. H. Defebaugh, who, having been duly sworn according to law, deposes and says that he is the Editor of the *HARDWOOD RECORD*, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in Section 443, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of— Postoffice address—
Publisher—The Hardwood Company, 537 So. Dearborn St., Chicago, Ill.
Editors—E. H. Defebaugh and E. W. Meeker, 537 So. Dearborn St., Chicago, Ill.

Managing Editor—E. W. Meeker, 537 So. Dearborn St., Chicago, Ill.
Business Managers—None.

2. That the owners are (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.):
E. H. Defebaugh, 537 So. Dearborn St., Chicago, Ill.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are (If there are none, so state): None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustee, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest, direct or indirect, in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is ———. (This information is required from daily publications only.)

(Signed) E. H. DEFEBAUGH, Editor.

Sworn to and subscribed before me this first day of October, 1917.

JAMES S. PENNINGTON.

[SEAL.]

Notary Public.

(My commission expires October 24, 1920.)

Hardwood News Notes

< MISCELLANEOUS >

The Lents Spring Hub Company has been incorporated at Benton, Ky. The Brown-Hawkins Lumber Company, Detroit, Mich., is in the hands of the creditors.

The Corbin Folding Chair Company, South Bend, Ind., has been incorporated, and is capitalized at \$25,000.

The Schmit Trunk & Bag Company, Oshkosh, Wis., has sustained a loss by fire.

The Ross Lumber Company at Knoxville, Tenn., has been incorporated under the same style with \$35,000 capital.

The Boynton Land & Lumber Company, Boynton, Ark., has been succeeded by the Anderson Poorman Manufacturing Company with headquarters at St. Louis, Mo. The company is capitalized at \$100,000.

The Boice Hardwood Company has been incorporated at Richmond, Va.

At Olympia, Wash., George M. McDowell has been appointed receiver for the Olympia Shipbuilding Company.

The S. L. Eastman Flooring Company, Saginaw, Mich., has been dissolved, with W. H. Erwin appointed as receiver of its effects and estate.

Fire losses are reported as having been sustained by the Twin City Hardwood Lumber Company, St. Paul, Minn.

The capital stock of the Arkmo Lumber Company, Little Rock, Ark., has been increased to \$200,000.

The following incorporations are reported: The Murfreesboro Block Company, Murfreesboro, Tenn., to manufacture axe handles; The Leonard Land & Lumber Company, Nashville, Tenn., capitalized at \$10,000; the Keller & Tamm Manufacturing Company, St. Louis, Mo., re-incorporated at \$200,000; the Pinellas Novelty Works, St. Petersburg, Fla., capital \$10,000; the Blue Springs Lumber & Milling Company, Blue Springs, Mo.; the Timber Products Company, Brunswick, Ga.; the Baldwin Shipbuilding Company, New Baltimore, N. Y.

The Missouri Plate Glass Company, Valley Park, Mo., is an involuntary bankrupt.

At Knoxville, Tenn., the Knoxville Veneer Company has assigned and W. W. Carson, Jr., appointed receiver.

The Wheeler-Timlin Lumber Company has succeeded O. Paulson at Dorchester, Wis. The headquarters of the company are located at Wausau, Wis.

The assignment of the James Marcus Mount Vernon Woodworking Company, Mt. Vernon, N. Y., is reported.

J. A. Huddleston, F. A. Weaver, A. W. Damron of Excelsior, W. Va., H. C. Beavers of War, W. Va. and W. W. White of Welch have incorporated the Bull Creek Hardwood Lumber Company at Excelsior, W. Va., to operate sawmills in McDowell county with a capital stock of \$20,000.

< CHICAGO >

The General Specialty Company, city, has changed its name to the Chicago Woodcraft Company and decreased its capital to \$5,000.

The Schweizer & West Manufacturing Company, another local concern, has changed its style to the West Woodworking Company.

Among the out-of-town lumbermen who attended the world's series games in Chicago were: Max Sondheimer of the E. Sondheimer Company, Memphis, Tenn.; John W. Dickson of the Mississippi Valley Log Loading Company, Memphis, Tenn.; R. M. Carrier and General Manager McCormick of the Carrier Lumber & Manufacturing Company, Sardis, Miss.; J. H. P. Smith, Detroit, Mich.; J. G. Brown, Louisville, and Bob Carpenter, New Orleans, general southern manager of the Chicago Belting Company, who by the way was on his way to Canada.

J. E. Walsh, sales manager for James E. Stark & Co., and the Memphis Veneer & Lumber Company, Memphis, Tenn., dropped in *HARDWOOD RECORD*'s office last week on his way south from a trip to northern and eastern points. Mr. Walsh got as far east as the coast and reported conditions rather slack in that territory, but said that prices are holding up well. While at Buffalo he made a visit to the plant of the Curtis Aeroplane Company and was very much impressed with the prodigality in the use of ash. He said that only about five per cent of the lumber purchased is actually consumed in the manufacture of airplanes. Mr. Walsh counted on working around in the Chicago district for a week or so before landing in Memphis. He will have been out for about four weeks when he returns to his home city.

G. H. Holloway of the Utley-Holloway Company, Conway building, Chicago, returned a short time ago from an extended trip South. After stopping here a few days he went back again to the company's new mill operation at Clayton, La. The new mill is rapidly nearing completion and will soon be in operation. The Utley-Holloway Company is growing so rapidly that it has engaged much more extensive offices on the tenth floor of the Conway building, where it is now located.

Morris Welsh, representative of the Lamb-Fish Lumber Company, Charleston, Miss., spent some time with the trade about a week ago.

W. J. Grossman, secretary-treasurer of the Tipler-Grossman Lumber Company, Green Bay, Wis., was in Chicago for a few days last week. Among other northern visitors were: George C. Robson of the Kinzel Lumber Company, Merrill and J. H. O'Melia of the J. H. O'Melia Lumber Company, Rhineclander, Wis.

F. R. Gadd, assistant to the president of the Hardwood Manufacturers' Association of the United States, spent a brief time in Chicago last week. Mr. Gadd is growing more enthusiastic every day over the workings and prospects of the association's open price competition plan established at last winter's meeting.

L. H. Wheeler of the Wheeler-Timlin Lumber Company, Wausau, W., dropped in on Chicago friends about a week ago.

Fort Benjamin Harrison near Indianapolis, has many Kentuckians in its roster, who keep things lively. One of the candidates for commander is Sam Mengel who was connected with the C. V. Mengel & Bro. Company, Louisville, Ky., for several years before enlisting. One of his latest feats was a record of 172 out of a possible 200 points in shooting with a .45-calibre, automatic revolver. He with other boys from old Kentucky are in the "Reds" camp and are making life miserable for the "Blues." This initial work of the boys in Uncle Sam's camp is making them fit for service in France, and you will hear from all of them.

◀ BUFFALO ▶

Lumbermen are giving much attention at present to the Second Liberty Loan and are taking a large part in the subscriptions. Among members of the hardwood industry who have subscribed for large amounts are the Hugh McLean Lumber Company, Taylor & Crate and the A. J. Chestnut Lumber Company, each subscribing \$50,000.

A new sort of lumber truck of the caterpillar pattern was shipped to Thessalon, Ont., a few days ago for the Hope Lumber Company, in which a number of North Tonawanda lumber dealers are interested. According to a member of the company, this is the first truck of the kind to be sent into the woods. It will be used for hauling logs from the company's timberlands to its sawmill and is expected to locomote across the territory on its peaceful business with as much ease as the famous "tanks" do on the battlefields abroad. The experiment will be watched with interest by other lumbermen.

Pretty nearly everybody in the city lumber trade turned out to the annual chestnut picnic on October 11. The trip is getting to be a habit, though chestnuts are hardly that. Last year the rain kept the people in an adjoining hamlet during the "outing," and this year the chestnuts failed to be ripe enough to fill the visitors' pockets, but they will go next year just the same, for the Boston hill is famous as a late picnic ground, especially when the Buffalo Lumber Exchange stops there with its twenty-five automobiles and material for two big meals.

Chairman C. N. Perrin of the Lumber Exchange, looked after it all, with the assistance of his able corps of associates, and they cooked a meal, led by a barn-door size of beefsteak and followed just at night with another, led by vast halves of roast chicken. The chief cook was F. M. Sullivan, who has done the act as a cowboy on the western plains, and has not forgotten a single detail in the process. E. J. Sturm and Eugene Nostrand also helped put the eatables into shape and see that the pit fires didn't burn the provender.

The rest of it was ball game and pitching quills. The sides in the base ball nines were selected by E. W. Gerlitz and W. P. Miller, with C. W. Betts as usual the umpire, who several times during the melee saved his life by a display of bowie knives or a change in the decision. The pitchers were I. N. Stewart and Chairman Perrin, Mr. Stewart keeping his opponent's score down to ten and running his own side up to fifteen. Somebody has observed that it took eleven men to play a ball game on that field, but that number was chosen of course because eleven men are better than nine. Besides there is always someone coming around at the last moment and admitting that he is a good player.

◀ PITTSBURGH ▶

A. G. Breitwieser of the C. E. Breitwieser Lumber Company is spending his time at the company's new operation in West Virginia where a splendid lot of hardwood is being turned out.

The Seaboard Construction Company has the contract for raising the bridges of the Pennsylvania Railroad Company over the Allegheny river and a large amount of oak and other construction timbers will be used on the job.

J. Rex Flinn, president of the Duquesne Lumber Company, has been at that company's big operation at Braemar, Tenn., lately, getting a line on production and other important business around the mill.

The Frampton-Foster Lumber Company reports the best demand for hardwood in its history, especially for oak timbers. It has its scouts out all the time looking for choice contracts of oak or nice lots of oak which can be bought.

The Aberdeen Lumber Company, according to President J. N. Woollett, is looking for considerable higher prices for gum and cottonwood, later in the fall. Mr. Woollett's position is that since the big shipments have come out of the Southwest following the government's sending hundreds of cars into that territory, there is going to be something doing in the price line.

The Pittsburgh Wholesale Lumber Dealers' Association has enthusiastically supported the candidacy of E. V. Babcock, president of the Babcock Lumber Company, for mayor of Pittsburgh and E. V. is giving his opponent a splendid run for his money.

The Kendall Lumber Company is about to start up its new mill near Unlontown, Pa., again after a short shut down. The company's business in mine timbers is the best in its history, according to Sales Manager Young.

◀ BOSTON ▶

The New England Wholesale Lumber Association, Inc. held a meeting devoted chiefly to transportation conditions. Report was received of the findings of the case, Docket 1050, and, as has been previously reported, they were held to be just and fair to the wholesale trade of New England. A serious menace to the trade was discussed in the development of the method used by the railroads in handling shipping permits. Comparisons of the experiences of several dealers showed it to be a part of the process to inform the consignor and consignee mutually of all factors pertaining to the shipment and in some cases to insist on the lumber being consigned direct to the ultimate user from the producing point. Both of these courses result in all future business of the wholesalers being open to disclosure to the shippers and patrons, which is considered a violation of the act of Congress, Sec. 15, as ruled by the Interstate Commerce Commission on February 7, 1916, under Docket 5518. A committee composed of H. M. Bleckford, Harry C. Philbrick and Wm. Bacon was appointed to prepare and present in the name of the association resolutions setting forth the situation and demanding immediate relief from such operation of the system.

Following the business meetings of the two organizations, a dinner and general meeting of the whole trade was held in the banquet hall at which several lumbermen and outside speakers made a strong presentation of the wisdom and necessity of the trade as a whole supporting the Liberty Loan by both buying themselves and influencing purchase by others. An involuntary petition in bankruptcy has been filed against N. P. Gifford of Salem, Mass. Results of the examination have not been reported, but the indications point to an insolvent condition with the list of creditors amounting to some \$100,000 and including a number of Boston firms in sums varying from less than \$100 up to about \$8,000. "Nate" Gifford has conducted the business for a great many years, having succeeded to the same at the death of his father. He had become widely known and it will be, with great regret that his many friends note his inability to sustain the old concern in its former standing.

◀ BALTIMORE ▶

Among visiting lumbermen was Mr. Selden of the Selden Selling Agency, Washington, which represents the Union Cypress Company of Hopkins, Fla. Mr. Selden called on a number of the hardwood men here. He stated that the demand for cypress was fair.

A company to construct aeroplanes, promoted by A. R. Phillips, who for a number of years was superintendent of the Curtiss plant at Buffalo, N. Y., is to locate at Warwood, W. Va., above Wheeling. Over \$300,000 worth of stock in the corporation has already been sold and work on the plant is to commence shortly.

J. McD. Price, engaged in the wholesale hardwood trade, is back from a week's trip to North Carolina and other hardwood sections, where he went to look after business.

Among the Baltimore lumbermen who have joined the forestry regiments being recruited for service in France is Harry T. Snyder of the Mann & Parker Lumber Company, who has been advanced to first sergeant. He is stationed at Washington at this time, and an effort is being made to secure him a commission as second lieutenant. Mr. Snyder has had about eleven years of experience in the trade and is eminently qualified.

◀ COLUMBUS ▶

Plans are now shaping up for a general building conference to be held in Columbus in connection with the real estate and building show, January 21-30, 1918, at the Ohio state fair grounds at Columbus. The Ohio Builders' Supply Dealers' Association, Ohio Retail Lumber Dealers' Association, Agricultural Lime and Limestone Association and the Union Association of Sash and Door Salesmen have already decided upon dates within those stated above for their conventions in order to participate in the conference, assuring a total attendance to date of 2,200. Other associations are giving favorable attention to these dates in calling their conventions in Columbus, and some will call special meetings at that time in order to share in the building conference.

The Christy Company has purchased the plant of the Fremont Lumber & Supply Company, Fremont. Extensive additions will be immediately made to the newly acquired plant.

C. V. Gough, former owner of the Glen Park Lumber Company, Gary, Ind., is building large lumber yards, preparatory to his engaging in business in Akron, O.

The Stewart-Monroe Lumber Company, Cleveland, has been incorporated with a capital of \$25,000. The incorporators are Milton S. Stewart, O. Monroe, David E. Green, N. M. Wilkinson and H. D. Palmer.

After several months' delay in securing a suitable man for executive secretary, the Yellow Pine Wholesalers' Association, organized in August and composed of about two score of wholesalers in yellow pine, has selected Walter L. Goodnow to fill the position. Mr. Goodnow is well known in association circles and has been connected with B. H. Pollock & Co., of St. Louis, for several years. He has taken up his duties at 1109 Second National Bank building, Cincinnati.

The Newton Falls Lumber Company, Newton Falls, O., has sold out to the Western Reserve Lumber Company.

R. W. Horton of the W. M. Ritter Lumber Company reports a good demand for hardwoods, especially from factories. Concerns making boxes and furniture are good customers and the same is true of vehicle and implement concerns. Prices are steady and every change is toward higher levels.

The Imperial Lumber Company is having a good demand for West Virginia hardwoods. Prices are steady and shipments are slow in coming out. J. A. Ford is at the head of the company.

Cleo B. Brown, secretary and treasurer of the Columbus Lumber Company, is seriously ill at his home in Columbus, suffering from blood poisoning. The trouble came from a gathering in one of his ears. His condition is critical.

The Columbus Lumbermen's Club is serving noon luncheons at its club-rooms at Chestnut and High streets, and lumbermen from the city gather at the club rooms to discuss business conditions. Members are coming in fast and a large percentage of Columbus dealers and jobbers are identified with the organization.

INDIANAPOLIS

William Roach and Isaac H. Brewer, owners of the Roach & Brewer Lumber Company, maintaining yards at McCarty and Chase streets in Indianapolis, were arrested last Friday by Indianapolis police on the charge of receiving stolen goods. Their arrest followed the purchase of timber from John C. and William Miller, loggers, who are alleged to have stolen the timber from Sellers farm, southwest of the city, a tract of land owned by the city for the purpose of maintaining a site for the municipal garbage reduction plant. The arrest of the two lumbermen resulted from a legal controversy between the city and the Millers, who have been living on the land for so long that they have set up a claim to a part ownership, and now have a suit pending in court to quiet the title. The city ordered the arrest of Mr. Roach and Mr. Brewer in order that civil action might be instituted against the two men in case the civil proceedings questioning the title of the land is decided in behalf of the city. Following their arrest both of the lumbermen gave bond and were released.

Dean Binkley, Indiana Harbor, Ind., assistant manager and treasurer of the Indiana Harbor Lumber Company, and Miss Glenn Call of Valparaiso, Ind., were married last week. After a short wedding trip Mr. and Mrs. Binkley will be at home to their friends in Indiana Harbor.

Mathias Meyer, eighty-one years old, a retired sawmill operator of Fort Wayne, Ind., died last week following an illness of two years. His advanced age caused him to leave active business duties several years ago

when he was operating successful mills in and near Fort Wayne. He is survived by a widow and four children.

S. J. Peabody, head of the Peabody Lumber Company, Columbia City, Ind., departed last week for Daytona Beach, Fla., where he will spend the winter.

The Freeland Park Lumber Company, Freeland Park, Ind., has been incorporated with a capitalization of \$5,000. Directors of the company are J. C. McKibben, A. W. Nelson and H. E. Cook.

O. D. Haskett, head of the O. D. Haskett Lumber Company, has been elected a director of the Indiana Greater Industrial Association, which controls Mars Hill, an industrial suburb. Mr. Haskett was president of the association last year and it was during his management that the indebtedness of the organization was paid. He is being congratulated by the business interests of the city for his good work.

John Miller, sawmill operator of Union City, Ind., died recently. He had been ill with paralysis for two years. He was born in Clairmont county, Ohio, in 1851, and moved to Union City ten years ago, where he has since been identified with the lumber industry. He is survived by a widow and four children.

The Showers Brothers Furniture Company, Bloomington, last week subscribed for \$50,000 worth of Liberty bonds. Officials of the company report that they now are employing about 100 women to operate machines that formerly were operated by men. The company is having little difficulty in meeting the labor shortage resulting from the war. Although most of the women employed have never worked before, they can turn out about as much work as men.

Hardwood lumber shippers in Indiana are preparing to oppose a petition filed by Indiana railroads with the Public Service Commission asking for an increase in rates of 15 per cent within the state. They state that the proposed rates would be prohibitive and that it would be cheaper in many instances to ship out of the state and reship back into Indiana in order to deliver freight at distant points within the state.

The conscription appeal board of the Indianapolis district has granted a request of Vincent L. McDonald, general manager of the Batesville Lumber and Veneer Company of Lawrenceburg, Ind., that he be permitted to report for military duty on April 1, 1918, instead of at the present time for military duty. Mr. McDonald explained to the board that he has been the sole manager of his company's affairs and that it would work a hardship on the company if he should leave without giving the company several months' notice. When these facts were shown the appeal board his request was granted.

The Urmston-ShIPLEY Lumber Company, Indianapolis, has been incorporated with a capitalization of \$50,000 to operate a chain of sawmills.

EVANSVILLE

The regular monthly meeting of the Evansville Lumbermen's Club will be held at Hotel McMurdy, Tuesday evening, November 13, when several vacancies on standing committees will be filled by President Worland. A report on several matters pertaining to rates and car shortage will be given.

Charles Mailey, well-known lumber manufacturer at Jackson, Miss., was here on business recently. He reported trade conditions in the southern states coming along all right.

George O. Worland, secretary and treasurer of the Evansville Veneer Company, says veneer manufacturers of this section are getting a good many orders, but that business is not quite so brisk as it was during the summer months. Some of the veneer manufacturers are reporting a shortage on logs.

Elmer D. Lubring and associates have purchased the interest of Charles A. Wolf in the Wolf in-Lubring Lumber Company in this city. The name of the concern has been changed to the Lubring Lumber Company. Mr. Wolf in has purchased the interests of Mr. Lubring and associates in the West Side Lumber Company and the name of that concern has been changed to that of Wolf in West Side Lumber Company. Their many friends will wish them prosperity in their changed positions.

D. B. MacLaren of the MacLaren Lumber Company, who recently returned from a successful road trip, says he found business conditions very good and he sees nothing discouraging in the trade outlook.

Fred W. Reitz of the Clemens Reitz Sons Company, hardwood lumber manufacturers, who is a candidate for re-election as city councilman on the democratic ticket, is making an active canvass. Many of the men running for office on both the democratic and republican city tickets are closely allied with the lumber interests in this section. Mayor Benjamin Bosse, democrat, who is up for re-election, is also interested in other wood consuming factories here. His republican opponent is Albert Rosencranz Messick, sales manager for the Vulcan Plow Company. Frank Greise who is up for re-election as ward councilman on the democratic ticket, is connected with the Evansville Bookcase and Table Company. W. T. Karges, republican nominee for councilman in the fifth ward, is head of the Karges Wagon Works.

John A. Byers, a well-known lumber man of Guthrie, Okla., was here a few days ago on his way to his old home at Petersburg, Ind. Mr. Byers was for many years engaged in the lumber business at Hopkinsville, Ky.

Russel Wert and Miss Lillian Davis were recently united in marriage at Greensburg, Ind., and immediately after the ceremony departed for Winslow, Ind. For some time past Mr. Wert has been manager of the Allen Wilkinson Lumber Company at Waynestown, Ind., and a few days before his marriage was made manager of the business and yards of the same company at Winslow.

H. J. Leach of Mt. Carmel, Ill., a well known lumberman, has gone to St. Louis, Mo., to become field manager for the Egyptian Timber Company.

MEMPHIS

James E. Stark & Co., Inc., who have been running their band mill and veneer plant on double shift during the past few weeks have cut out running at night. The change of policy is due to the fact that log receipts have been so reduced that they were not heavy enough to justify operations beyond ten to twelve hours per day. Some other mills are still running on double time, but the general disposition is to reduce the hours because logs are not coming in fast enough. The Anderson-Tully Company recently abandoned the night shift at Vicksburg, Miss., because of labor troubles.

The Hartwell Lumber Company has made application for a charter under the laws of Tennessee. Its capital stock is \$100,000. The gentlemen composing the new company recently purchased 2,700 acres of hard-

wood timberlands in Chicot county, Arkansas. For the next few months the firm will sell logs in the open market but next spring it proposes to establish a hardwood mill at some convenient point to this tract and to launch into the manufacture of hardwood lumber. H. F. Hartwell, J. L. McRee, Thomas H. Jackson and others are the incorporators.

The L. D. Murrelle Lumber Company has taken over and begun operating the hardwood mill formerly owned by the Nickey & Sons Company. The plant is located in North Memphis and has been idle for more than a year as the selling firm has been going through a process of voluntary liquidation. The new owner will be bringing logs from Marks, Miss., where it owns considerable timberlands, but the purchase of the Memphis plant will not interfere in the least with the mill of the same firm at Marks.

Box manufacturers and cooperage interests in Memphis continue to do an exceptionally large business. Wooden containers of all kinds are in unusual request and orders in volume can be had for either boxes or barrels. Most members express the belief that the outlook is most flattering. Indeed, they foresee more business than they can handle in view of the growing shortage of labor, the increasing scarcity of cars and the approach of winter with its numerous restrictive influences. The prices on all wooden containers are exceptionally well maintained. Veneers interests too are enjoying an excellent demand for their output and are frank enough to admit that they are sold up for the remainder of the year and to say that they foresee a large profitable business for 1918.

The F. T. Dooley Lumber Company which suffered a loss of \$15,000 from a fire in its yards in South Memphis some days ago was fully protected by insurance, and has already succeeded in repairing its wreckage and resuming shipments. The management is inclined to be quite skeptical regarding the theory that the fire was started by German sympathizers.

Dispatches received here from Blytheville, Ark., report the destruction by fire recently of the mill of Lee Wilson & Co., at Armored, Ark. The loss was estimated at \$50,000, partly covered by insurance.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, has returned from Washington where he attended the conference between executives of the railroads in central and eastern territory and members of the Interstate Commerce Commission arranged by the former with the view to proposing a general advance in freight rates from Ohio and Mississippi river crossings to destination in Central Freight Association and Eastern Trunk Line Territory. Mr. Townshend says that lumber is bearing all the freight the traffic will stand, and that the association will vigorously oppose any further advances in rates on southern hardwoods. He points out that the advances from Ohio and Mississippi river crossings will make necessary a complete revision of lumber tariff from southern producing points. The association has known for some time that the railroads were going to attempt another advance in rates on lumber and Mr. Townshend attended this conference in order that he might secure first-hand knowledge regarding the tactics to be adopted by the carriers in their efforts to saddle more freight burdens on the lumber industry.

Killing frost throughout the Memphis territory has done great damage to the cotton crops and has seriously curtailed production on cut-over lands owned by lumber interests. But the latter, like all other producers, are finding much consolation and not a little compensation from the unusually high prices prevailing for both cotton and cotton seed. And they are extracting still further encouragement from the fact that higher prices for cotton and other crops are greatly increasing demand for these cut-over lands and are likewise materially enhancing values thereof.

LOUISVILLE

One of the principal matters under discussion in Louisville is relative to the traffic situation, and the recently placed Southern Railway embargo against shipments through Cincinnati and Louisville into the North and East. This embargo covers lumber and general dead commodities, and may remain in force for several days. However, from now on the lumber

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

trade is figuring on bucking a series of rail embargoes, car shortage, etc., and would hardly feel natural without these difficulties.

A. E. Norman, Jr., vice president of the Norman Lumber Company, and Miss Nell Crutcher Fulton, daughter of Dr. Gavin Fulton, of Louisville, were married at St. Paul's Church, on Wednesday evening, October 10. Following the wedding and a home reception, Mr. and Mrs. Norman went East to spend the balance of October.

J. R. Kirwan of Kirwan Brothers, Louisville, and Miss Lillian Rothermill of Louisville were quietly married last week, leaving immediately afterward for a trip East.

The Smith Cooperage Company, manufacturer of slack barrels, has installed a new two-ton truck for handling deliveries, and is so pleased with its work that it is probable that all horse-drawn vehicles will shortly be

done away with. About three trucks would give the company a surplus delivery capacity. The new truck is an "Indiana," and is equipped with a 100 barrel capacity.

Paul F. Higgins, president of the Higgins Lumber Company, is father of a fine new boy, which he claims will become a hardwood mill operator some of these days.

Following an illness of several weeks, Richard Van Dyke Norman, seventy years old, died last week. Mr. Norman was a brother of A. E. Norman, president of the Norman Lumber Company, and was formerly a member of the state legislature and prominent in grain circles.

Due to an illness lasting since last June, William E. Demply, a former sawmill operator of Brownsburg, Ky., died at a local hospital. Mr. Demply was sixty-four years old, and had retired some time ago. He is survived by a wife and several children.

Announcement has been made at Monticello, Ky., to the effect that the Bassett Hardwood Manufacturing Company will close its mill at that point shortly, and will not operate another season, having made arrangements to move the plant to Oneida, Tenn. This mill has been cutting hickory, and is endeavoring to get the timber men of the district to deliver all logs and butts before the mill closes.

It is claimed that the recent law prohibiting the manufacture of whisky resulted in cutting off the manufacture of 600,000 tight barrels for use by Kentucky distillers, this being an average number used annually. The value of 600,000 barrels is about \$2,107,000. It was further estimated that it cut off a demand for 8,000,000 bushels of grain, valued at \$6,351,450 last season, labor costing over a million dollars, coal \$437,000, insurance of \$100,000 and supplies of \$407,750. The total loss through non-production is figured at nearly \$10,500,000. These figures were based on the showing made last year, which was not an especially big season.

News has been received of the death of Ben F. Soper, president of the Richmond Lumber Company, Richmond, Ky., who has been ill for several weeks. Mr. Soper was seventy-nine years old and a native of the state, having lived at Danville, Ky., until 1905. He is survived by a number of sons and one daughter.

The Louisville Credit Men's Association and other local business organizations have taken up the subject of "trade acceptances," a matter taken up several weeks ago by the Louisville Hardwood Club, this organization endorsing the movement, and putting it up before the national lumber organizations for endorsement. The musical industry and other interests are keenly interested in the movement, which gives promise of becoming general.

Joseph Dreidel, pioneer slack barrel manufacturer of Louisville, who has been in the business for more than forty years, recently died in Louisville of stomach trouble. Mr. Dreidel operated a large barrel plant under his own name, making principally apple and flour barrels. The business was started at Cincinnati and later moved to Jeffersonville, Ind., being moved to Louisville many years back. Mose Mandel, executor of the estate, which was left to Mrs. Dreidel, will continue the plant, which will be in active charge of Miss Nettie Elkins, who has been office manager for some time.

Surplus stocks in the hands of lumber manufacturers are probably a bit larger than is commonly thought, but at that the manufacturers will go over into the new year with very light stocks. When the big demand struck the trade a few months ago everyone started cutting, and capacity operations were handled for some time. Some of this stock failed to move, and during the past four months it has been getting well seasoned and in fine shape for the big fall demand that is expected to break shortly. Large concerns supplying government contracts have not managed to obtain much surplus stock, and what surplus is to be had is mostly in the hands of the smaller manufacturers who have not found business quite so brisk.

Walter Parker, representative of the Department of Commerce, recently delivered an address before the Louisville Board of Trade relative to reviving river traffic in an effort to aid the carriers at a time when the railroads are swamped with business. Mr. Parker called attention to the fact that Louisville enjoys exceptionally good freight rates, made possible largely by the fact that river competition in the old days resulted in the carriers being forced to set low rates. Mr. Parker also called attention to the many millions of dollars that the government has spent in its efforts to bring about a nine-foot stage in the Ohio, to afford boating water the year around. River traffic has slumped badly in the past few years, and at present only a few small boats are running.

In this connection the newspapers have been handling articles to the effect that the Interstate Commerce Commission may shortly conduct an inquiry into the ownership of the Louisville & Cincinnati Packet Company, it having been strongly hinted of late that the Louisville & Nashville railroad might be interested in a hidden ownership. The packet company has taken off its large boats, and has been operating small ones, claiming that the high cost of coal and light traffic was responsible.

The Mengel Box Company recently subscribed \$250,000 to the Liberty Loan campaign in Louisville, in which the maximum sum to be raised is almost \$13,000,000. The Mengel company's subscription equaled the largest made in the city, there being two other subscriptions of a quarter of a million.

The Interstate Commerce Commission recently notified the Paducah, Ky., Cooperage Company and the Paducah Board of Trade that the increased rate order on staves and cooperage materials from the Southwest to Paducah would not go into effect until January, 1918, pending action before the Federal courts, in which the carriers undertook to have a granted in-

junction made permanent. The case was recently heard in Louisville before the Federal judges, and a decision is expected in a short time. The date for the order to become effective had been set up from June 15 to October 15, but has been changed to January so as not to interfere with the action of the court.

R. L. McKellar, foreign freight traffic manager of the Southern Railway System at Louisville, who some time ago started a movement toward getting shippers to ship export freights through southern ports, is much pleased with the action taken at the recent meeting of the United States Chamber of Commerce at Atlantic City, in which resolutions were adopted furthering the movement of exports through southern ports. Mr. McKellar was one of the first to push this movement, which it is claimed will be a great aid to the South and the lumber industry, and to traffic in all parts of the country through relieving eastern congestion.

The Murphy Chair Company, manufacturer, Owensboro, Ky., has announced that it is now working 100 men and will employ 100 more as soon as they can be obtained. The company recently moved to this city from Detroit, Mich.

WISCONSIN

The Jenkins Machine Company, Sheboygan, Wis., which specializes in sawmill and woodworking equipment of all kinds, has enlarged its line of products by acquiring the Pribnow Swage & Tool Works, Mellen, Wis. The equipment, stock and entire force of the Pribnow company has been transferred to Sheboygan.

The Gill-Anderson Lumber Company, Wausau, Wis., has increased its capital stock from \$30,000 to \$40,000.

Articles of incorporation were filed recently in behalf of the Milwaukee Furniture Manufacturers' and Wholesalers' Association, a non-stock corporation organized for mutual benefit. The incorporators include A. K. Meinecke, Theodore D. Schilling and John E. Rilling.

A first dividend of 20 per cent has been declared in favor of creditors of the defunct Kurth Broom Company, Milwaukee. The assets recently were sold for \$1,100.

The entire plant of the Merrill Veneer Company, Merrill, Wis., was destroyed by fire recently, causing a loss estimated at \$50,000, with insurance of about 50 per cent. The plant consisted of frame buildings and the owners may decide to reconstruct it of reinforced concrete and brick. The company was organized ten years ago and employed about sixty men when in full operation. W. J. Kyes is general manager.

The J. S. Stearns Lumber Company, Odanah, Wis., closed down its mill on October 10 for about a month's time, during which it will be overhauled and put into shape for an indefinite run throughout the winter and spring at maximum capacity. The Stearns mill has been one of the most active in northern Wisconsin, having been in operation day and night since the fall of 1916.

George H. Altenburg, Stevens Point, Wis., has decided to dismantle the old Altenburg sawmill near Dancy, Portage county, which originally was established in 1840 and is one of the pioneer mills of the Wisconsin river valley. The plant has not been in operation for six years.

The Willow River Lumber Company, Grand View, Wis., will operate six logging camps during the winter, an increase of two over former years. It already has commenced to ship logs, about twenty-five cars moving daily. The company reports a great scarcity of woodsmen, but immediate requirements are satisfactorily filled.

The G. W. Jones Lumber Company, Appleton, Wis., has started work on the erection and equipment of a new planing mill at its sawmill in Wabeno, Wis. The planing mill will be 60x50 feet and contain a combination planer and resaw with a capacity of 250 feet per minute. The power installation will consist of a 150-h.p. Corliss unit.

The R. Connor Company, Marshfield, Wis., is completing an active season's construction at its mills at Laona, Wis. Fourteen workmen's cottages, 24x28 feet, have been erected and a large boarding house and other buildings provided to accommodate the mill force. Similar work will be undertaken early next spring.

The John S. Owen Lumber Company, Owen, Wis., has resumed operations in its big mill, which has been closed down for two months while important repairs and replacements were made. The company is prepared for a maximum run from now until the fall of 1918. A night shift will be started just as soon as sufficient help can be procured to keep the supply of logs up to requirements.

Menting & Hickey, Pence Lake, Wis., sustained a heavy loss by fire in the millyard recently. More than 1,000,000 feet of lumber were destroyed, but it is stated that the mill was saved. The loss is partly covered by insurance.

The John Schroeder Lumber Company, Milwaukee, has started an active season's logging in the vicinity of Ashland, Wis. Camps are being opened near Bayfield and on the Bad River Indian reservation, and in addition the company will operate two camps on Outer Island and one on Stockton Island, of the Apostle group. These camps will be plentifully supplied with fresh meat from the large herds of cattle and hogs maintained on the islands. Last spring 300 steers were turned loose for fattening and will help to reduce the high cost of logging.

The Eagle Broom Works, Eagle, Wis., have increased their capital stock from \$25,000 to \$100,000.

The Antigo Potash Company, Antigo, Wis., has changed its name to

Antigo Potash & Fuel Company and increased its capital stock from \$3,000 to \$75,000.

The Tomahawk Toy & Novelty Company, Tomahawk, Wis., has booked an order for 5,000 "Kik-kars," a children's self-propelled vehicle, for delivery for the Christmas trade, which will keep the plant busy night and day for a month or more.

J. G. Wenzel, Merrill, Wis., has assumed the general management of the Lincoln Box Company of that city, in which he has held the controlling interest and presidency for some time. Until now, however, Mr. Wenzel maintained his connection with the A. H. Stange Lumber Company.

The E. J. Pfiffner Lumber Company, Stevens Point, Wis., has completed the work of reconstructing its planing mill, which was badly damaged by fire. The new mill is electrically-operated throughout, the steam power plant being abandoned. Current is being purchased.

The Wisconsin Textile Manufacturing Company, Two Rivers, Wis., which specializes in hardwood products for the textile industry, has increased its working force to handle large orders for glove and stocking forms from big knitting firms in Canada which are filling orders for the United States Government.

C. Fred Calhoun, manager of the Antigo (Wis.) sawmill of the Frost Veneer Seating Company, Sheboygan, Wis., has been appointed general manager of the company, with headquarters at Sheboygan, to fill the vacancy caused by the death of his father, W. C. Calhoun. The change is effective November 1. Mr. Calhoun was elected mayor of Antigo last April under the commission form of government, and will relinquish this office.

The West Lumber Company, Lugerville, Wis., is among the first to announce that it will observe the "meatless" and "wheatless" edicts of Food Administrator Hoover in its logging camps during the coming winter. The food conservation rules have been in effect at the West boarding house at the Lugerville mill for some time.

The Fountain-Campbell Lumber Company, Donald, Wis., has amended its corporate articles to provide for an increase in the capital stock from \$70,000 to \$250,000 and also changing the location from Donald to Ladysmith, Wis.

The Wisconsin Duplex Auto Company, Clintonville, Wis., a \$500,000 corporation, organized by William A. Besserlich, to manufacture passenger and commercial vehicles employing a duplex drive transmission, held its first annual meeting on October 23 and made arrangements for its initial production. For the present the cars will be manufactured at the plant of the Andrews Motor Manufacturing Company, 834 Muskego avenue, Milwaukee.

The Sawyer-Goodman Company, Marinette, Wis., is reported to have arranged with the Sagola Lumber Company to saw about 3,000,000 feet of timber during the coming winter. The Sawyer-Goodman mills have been closed for some time because of labor troubles. The Sagola company will undertake the contract as soon as it has completed its own cut.

The Mohr Lumber Company, Tomahawk, Wis., has completed its first season's run at that point and has closed down the mill for much-needed repairs and replacements. The work will require about sixty days' time.

The Barker Lumber Company, which took over the former Washburn planing mill at Sturgeon Bay, Wis., some time ago, has changed the entire factory drive to the individual electric motor system but will continue to maintain the steam power plant for emergency purposes.

Rieboldt & Wolter, shipbuilders, Sturgeon Bay, Wis., have installed a 60 horsepower motor in their sawmill and a 25 horsepower motor in their planing mill to facilitate the construction of frame ships for the government.

The Hardwood Market

CHICAGO

A slight stiffening has been the call in the local trade during the past couple of weeks, and this in the face of continued slackness in the general run of orders. The local yards and factories have been getting a good deal of lumber of late on previously placed orders, and on top of this are uncertain, on account of growing labor difficulties, as to amounts necessary to purchase. The result is the continued slackness which is everywhere acknowledged, but as stated, in the face of this a full realization of the value of lumber has become general and there are few people who do not fully appreciate the very real bearing that continued labor shortage in the woods and at the mills, and difficulty in shipments of logs and lumber will have on supplies during the winter and the spring months. The result is the continuance of stiff prices with a tendency to advance rather than to rege.

Low grades are going strong, although of course the demand from the millwork and furniture and similar factories is in keeping with the demand for the products of these institutions.

BUFFALO

Owners of hardwood lumber yards are reporting good increases in stocks and seem to think that that is the best part of the trade. Nobody will fail to lay in what lumber he can get merely because the demand is not

heavy at present, for all believe the times are not yet past. Eastern consumers will have to depend on healthy stocks. The of brisk selling and replenishing of stocks is being done. The present condition is a normal one.

The market is generally calm, rather quiet, with war restrictions being in demand. This holds a check on the lumber trade, and particularly to many minor products, and the volume of business is up a good deal. In regular lines, however, not much is doing. The furniture factories report business quiet, and scarcely anything is being done in the building trade. The leading woods are oak, ash, maple and cypress. Thick stocks are commanding good prices, but in some grades of the leading woods prices are not up to the level of a short time ago.

◀ PITTSBURGH ▶

Hardwood men are coming up into full trade with a very fair collection of orders considering the general inquiry and the very apparent lack of business in hemlock and the pines. The general tendency among purchasing agents is to buy for current needs only, consequently few contracts are being made for 1918. Glass companies constitute an exception to this rule for they are buying pretty freely for next year's supply. In general prices are firm. Oak is very strong, the demand is keen and steady and the supply short. Other hardwoods are having a good degree of prosperity, especially furniture woods, which are in excellent demand. Mining materials are beginning to come up again after some what of a lull following the government's fixing the price of \$2.00 per ton for coal at the pit mouth.

◀ BOSTON ▶

The hardwood trade of this territory is practically devoid of important features. The causes of its dull condition continue unchanged, and, apart from prospective heavy consumption in limited lines, the general situation has not developed any basis for the anticipation of heavier trade. The demand is light, but the elements supporting values fully offset any falling off in prices which the weak market call might naturally cause. The delivering of lumber from the South and West presents quite as many difficulties as it has at any time past and the dealers expect the coming season that there will be further restrictions on stock from those districts into New England.

◀ BALTIMORE ▶

The hardwood situation has not improved greatly during the last two weeks. Difficulties of transportation, of inadequate car supply and of prompt movement of cars when they have been loaded are apparently as great as ever, and the easing off in certain directions, especially among the establishments that turn out trim and other materials used by the builders, is as pronounced as ever. In a general way it cannot be said that any material weakening in the market has taken place, and it is also entirely within the bounds of truth to say that the inquiry for hardwoods keeps up quite well. But the handlers of such woods are always too close to the edge, to feel comfortable over their position, and they have also found it desirable to reach out in new directions so that there would be no pronounced narrowing in the volume of their activities. In other words, the hardwood men have deemed it expedient to effect various readjustments, some of their old lines being at present greatly restricted or entirely closed. That they have succeeded in adapting themselves to circumstances is also true, and the aggregate of the movement is perhaps as large as it was before. At the same time, there is a sense of uncertainty over the trade which is not pleasant, and here and there this uncertainty has prompted concessions. The lower grades are being called for with gratifying freedom, and there are no extensive accumulations to trouble the producers. The absence of congestion, however, appears to be due more to the scarcity of workers and the inability of the mills to approach their maximum capacity than to a brisk demand. For the reason stated the danger of congestion seems to be small. High-grade stocks are moving less freely, but even here no real pressure is felt. All woods in general use are being called for, with the war giving rise to special needs that count decidedly in the total. There had been some expectation among the exporters that space on ocean going vessels would be available in some measure shortly, but at present this is being discouraged. It is declared to be the policy of the foreign countries with which the United States is allied to hold down their requirements in the way of lumber to the lowest possible proportions, and at that only the cheaper woods are being called for. Wherever the soft woods will answer, they are taken, to the exclusion of the hardwoods.

◀ COLUMBUS ▶

Strength is still the chief feature of the hardwood trade in this territory. Buying on the part of factories is the best feature, though some buying is reported by retailers. Shipping is slow.

Factories making boxes and furniture are good customers and vehicle and implement concerns are buying, as their lines are rather active. Surplus stocks in the hands of factories are not large and most of the concerns are buying as needed. Mill stocks are only fair. Railroad embargoes have effectually stopped shipments to certain sections, and there is a marked scarcity of certain stocks. Collections are generally good.

The following stock is in excellent condition, ready for immediate shipment

James D. Sacey & Co.
INTERNATIONAL TIMBERLAND FACTORS
EST. IN 1880

CHICAGO
1750 McCormick Bldg.

NEW YORK
30 East 42d St.

SEATTLE
626 Henry Bldg.

In fact, these dealers are buying only in limited quantities. Building operations show more activity. Dwellings and apartments are being projected and some factory construction is going forward. The campaign to buy raw lumber for fruit and projects that were temporarily postponed are being taken up again.

Planed, quartered oak is in good demand. Poplar is in good call, especially in lower grades. Ash, basswood and chestnut are firm. Other hardwoods are unchanged.

< CLEVELAND >

Business in the hardwood industry of Cleveland, as in other branches of the lumber trade, has become rather dull during the last fortnight, primarily on account of the severely cold weather. Stocks are piling up. Big building, however, keeps business in several lines normal, although the principal outlet, residence construction, continues about nil. These conditions have not made for lower prices, although a little weakness is noted here and there. Mills are as strong in their views as ever. Of late transit cars have been rather cheap, but in the last few days even these are stiffening. There are not so many transits as formerly, probably because of the big movement of troops and munitions in this district. This also probably accounts for the growing scarcity of cars, as reported by millmen coming into Cleveland. Oak and maple flooring are in lighter demand, but as firm as ever as to price. It is here where stocking up is noted. In low-grade hardwoods there is a distinct scarcity.

< INDIANAPOLIS >

The hardwood demand continues to be a source of disappointment to the Indianapolis trade, although the present indications are that the demand is becoming slightly stronger. As a result of comparatively low stocks prices are well maintained. The building trades are a silent factor and the demand for interior trim is so slight as to be practically a negligible quantity in sales.

The call from furniture manufacturers shows a little improvement as the fall season progresses, but the trade as a whole continues rather optimistic over this condition, believing that late orders will help to make up this loss in business. Furniture manufacturers profess to see a better demand for their products coming in the near future, and inquiries are now more numerous. Many buying tendencies at the present time seem to justify this belief.

Veneer manufacturers are reporting a fair volume of orders. Veneer industries in central Indiana have a large supply of logs on hand, but are still buying freely.

Box making materials are in excellent demand as a result of the press of war business. Common sap gum is being used quite extensively by box-making establishments. Many Indianapolis industries, especially the packing plants, have been buying boxes heavily in order to take care of their export business.

Car shortage conditions are more acute than they have been for the last six months, and these conditions are becoming more serious gradually. Southern shipments are slow in arriving.

< EVANSVILLE >

Trade with hardwood lumber manufacturers of Evansville and southwestern Indiana has been rather quiet, although a few nice orders are coming in. They are now passing through the usual dull fall season and are not looking for any material improvement for several weeks. The uptown mills continue to run on full time and one plant is being operated on the day and night schedule. Only one of the river mills here is now running. Collections are reported good. Crop conditions are not so promising as they seemed a month ago as a good deal of corn in this section was killed by the heavy frost two weeks ago.

The demand for the better grades of hardwoods continues good and prices are firm with indications that they will grow stronger as the winter progresses. The demand for quartered white oak is only fair, while plain oak, hickory, elm, maple and ash have been strong for some time. Quartered sycamore is in good demand. Poplar is in better call—there seems to have been a revival in this wood and many manufacturers here have been buying all the logs that they could obtain. The demand for the better grades of walnut is strong, the government using this material for blades for aeroplanes. Cottonwood is in good demand, a great deal of it being used by box factories. The furniture factories are not so busy as they were several weeks ago although some of the plants continue to operate on full time. Taken as a whole the outlook is encouraging and manufacturers look for a nice volume of business during the winter. Building operations are falling off some and it is not expected that much new construction work in Evansville will be started before early next spring. Sash and door men report a nice out-of-town business.

< MEMPHIS >

The demand for southern hardwoods is more active now than a fortnight ago. There is still considerable irregularity about the flow of orders but there has been a decided increase in the number of inquiries. These have increased the firmness of holders who have likewise been strengthened in their conviction that lumber is worth present prices by the discovery that there are only moderate stocks of gum and oak available. Informa-

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

tion is not compiled regularly regarding ash, hickory, cottonwood and some other hardwoods, but the knowledge that only moderate stocks are the rule where detailed information is to be had has caused a revision of ideas about the quantity of these other items. There was a disposition for a while to shade prices somewhat on hardwood but, on the other hand, practically all members of the trade are refusing to make any concessions. There is a good demand for cottonwood and gum in the lower grades and also for thick plain oak in S 4 to 10 4 or No. 2 common and better. Quite a good call is also noted for ash and hickory and, of course, both the lower and higher grades. A fair demand prevails for preferred oak and red gum. Box boards in cottonwood, gum and poplar are in excellent request at full prices and offerings are rather small.

Increasing difficulty is being experienced in effecting deliveries of lumber because of the growing shortage of cars. Conditions in this respect, lumbermen believe, will become steadily worse until the maximum movement of the cotton crop has been passed some weeks hence.

◀ LOUISVILLE ▶

A number of the large Louisville lumber manufacturers have been busy all fall, but most of them have been working on heavy government orders. Smaller concerns which haven't the capacity necessary to bid on big government contracts in many cases are not very busy. The furniture and auto manufacturers are steadily buying some stock, but the let-down in the building trades has resulted in a slack demand for interior trim, hardwood flooring, etc. Veneers are very active, and there is a good demand here. Walnut and mahogany are active, walnut especially so, while all high-grade woods have been moving fairly well in the direction of the musical instrument manufacturers. Thick stocks of oak, 4 4 to 8 4, ash, elm, hickory, etc., are moving well enough, while cottonwood is very scarce. Poplar is in better demand, although siding is dull, the principal demand being for boxboards, shooks, etc.

The trade generally is of the impression that late fall business will be good, and that prices will be maintained if they don't reach higher levels. Surplus stocks are not heavy, but very few concerns are carrying any long contracts through the fall, and hope to take advantage of being in position to ship surplus stocks at current market prices. The surplus log supply is fairly good in most of the mill yards.

◀ ST. LOUIS ▶

The hardwood situation is in pretty good shape. The demand is quite good, and considerable business is developing. Mill reports state that shipments are better but they still have many orders on their books that they have not been able to get out. The local trade is more than satisfactory, a good call coming from vehicle and box manufacturers, the latter buying very freely because of the big amount of special work in the filling of war orders. Nearly all items on the list are being called for and are getting scarce. It is pretty hard to fill many of them. The heaviest items in demand are oak, cottonwood and gum. Nearly all these items are badly broken at the mills because of the heavy demand that has been coming to them.

The demand for cypress is also quite good, the call coming mostly from the factory trade. It is fully as good as it was a year ago, however. There are not many orders coming from the country yards as business from that source is not showing up particularly well because building operations have gone much below the average. Mills are doing quite a good business. Prices on all hardwoods are firm and well maintained, with the prospects of going higher, because of the anticipated heavier cost in production and the scarcity of labor.

WAR

◀ MILWAUKEE ▶

Numerous mills in northern Wisconsin are closing down in order to make repairs and replacements necessitated by the ordinary wear and tear on equipment, but which has been accentuated this season by the extraordinarily heavy demands. For the most part, however, the plants will be idle only long enough to complete overhauling and will go into operation for full runs throughout the winter, instead of remaining closed until spring, as in former years. The requirements of lumber, especially hardwoods, continue to be of such volume that all available sawing capacity will be kept fully occupied for a long time ahead. Some mills will not be able to do winter sawing, as their supplies of logs have been exhausted and they must await new stocks, but many concerns have been doing logging all summer and will continue to operate without interruption, excepting for repairs.

The shortage of woodsmen continues to worry many lumber companies, but it is said that immediate requirements have been fairly well filled, although wages have had to be made unusually attractive, which will mean a big cut in profits. Loggers have been thrust into the position of competing with industries in the centers of population, and the present wage scale is the highest that has ever been known. The situation is one which doubtless will be reflected in an upward movement of lumber prices during the next six months, as costs have increased at a rapid rate all along the line. Lumber has increased in price at a much lower rate than practically all other necessities and well posted men in the industry can see nothing but advances ahead.

NORTHERN MANUFACTURERS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

It Tells Just What the Consumers Use

ANY hardwood or veneer man considers his personal knowledge of the requirements of his own trade his greatest asset.

But he realizes that if that knowledge is confined to a limited number of concerns his sales will be the same year after year. Hence to grow he must acquire more knowledge regarding other possible customers.

Do you as a seller of hardwoods or veneers think it is good business to invest years of your time and quantities of your money to gather that knowledge when you can get logically collated first-hand and absolutely live and authentic information on thousands of such consumers and can have the use of it immediately after application?

The cost is nominal and the service is elastic in its form and can be made to fit your peculiar requirements exactly. Write now and get the benefit of the annual corrections.

HARDWOOD RECORD,

CHICAGO, ILL.

Gum Veneers Gum Panels Gum Lumber

Immense holdings of the finest gum timber insure a supply for many years to come.

Transportation to mill is in our own hands, rafts and barges of logs are being received continually.

Equipment embraces five saw mills, four rotary-veneer machines and a large modern panel factory.

Employes have had long training in their specialties and are experts.

The whole combines to give customers superior stock and the best of service.

Your inquiries or orders will be appreciated and receive prompt attention.

Preparedness

We have mobilized for an emergency

It is well that consumers of lumber familiarize themselves with conditions for an emergency.

If So

When the crisis comes and you need dry, well manufactured lumber and need it badly, you are prepared, having familiarized yourselves with the quality and character of lumber produced by

Broom Handle Machinery

The latest addition to our line of Broom Handle Machinery—the well known "WESTCOTT" Automatic Broom Handle Lathe. This Lathe has, for many years, stood at the front for the turning of broom handles. The quality and excellency of its product is unquestionably the best.

We are now in position to furnish an absolutely complete broom handle equipment, and, if required, design your plant.

Ask us for information about our Tumblers, Bolters, Splitters, Chucking and Boring Machines, and in fact anything you require in this line.

COMING OUT

The American and Allied Governments are making enormous demands on the supply of American Black Walnut for high-grade war materials.

The production of fine Walnut logs and stumps is progressing on a scale heretofore unknown.

Virgin forests and handsome groves that have been jealously guarded from the woodman's axe for generations are now yielding to Democracy's requirements.

American Walnut is "coming out" in unprecedented quantity and **QUALITY.**

Our Veneer Experts—in the woods and at the mills—are ever on the alert for that exceptional quality of figured wood that distinguishes **PENROD PRODUCTS.** Out of the flood of timber reaching our mills, we are selecting finer quality and greater variety of rare veneer wood than we have ever offered before.

And, get this: We haven't added a penny to our veneer prices since the beginning of the war. We will not make any advance in price prior to *January 1st.* After that—we're not promising. We're going to do our best but the odds are against us.

So now is the time to make selections and place your orders for your 1918 requirements. Our stock is complete; our quality supreme; our prices right.

Wire or write for samples and we'll help you solve your veneer problem for another twelve months.

Cadillac Quality

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Box Lumber Buyers

THE limit of the market for box lumber from the Memphis district is fixed solely by freight rates. The lumber goes as far as buyers can afford to pay freight rate on it. In the northern parts of the Ohio valley states it comes in competition with lumber from the Lake States, and further east one of its chief competitors is the southern pine from the Atlantic Coast. In the upper Mississippi valley states and in the plains states west of the Mississippi the Memphis box material comes in contact with pine and fir from the Rocky Mountain region and even from the Pacific coast. These wide limits are set by natural barriers and transportation reasons, but Memphis holds about one-fourth of the box lumber business of the whole country, and that means a great deal to the power and prosperity of the region.

About 350,000,000 feet of the box lumber manufactured in the Memphis district, or shipped to other regions to be manufactured, is gum and cottonwood. These are generally considered the best available hardwoods for shipping boxes of the ordinary kind. That explains their wide market and the general demand for them. These woods may be procured, to some extent, from other parts of the country; but the greatest supply and the highest grades are produced in the district commercially tributary to Memphis.

It should not be supposed, however, that box factories take the best grades of cottonwood and gum any more than they take the best grades of other woods. Those who want the highest grades need fear no active competition from box manufacturers. Both of these woods are strong and tough, hold nails well, resist tendency to break or split, show printing and stenciling well, and have no odor or taste that is objectionable to the shippers of food products.

GUARANTEES

There is a difference in them — not alone in word-
ing and salesmanship, but in intent, in actual serv-
ice and in ability to perform.

The Grand Rapids Vapor Kiln guarantee is based
on a scientific measurement; it is original and the
result of our thirty years' experience in wood-
working.

We know the difference between ordinary kiln
operation and ordinary guarantees, and we know
you do want dependable-guarantees based on real
service and tests.

SAVE YOUR MONEY BY USING THE

RED BOOK Published semi-annually
 in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Lumbermen's Credit Association Estab. 1878

 Mention This Paper

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

of important shipping the lumber industry has been the easiest mark for the carriers. Lumbermen have always been the goats and lumber rates occupy a plane which is clearly out of proportion to the position in which they should stand in relation to the rates on other commodities. The lumbermen's fight is not against the general principle of raising freight rates, but it is against the principle of adding further to the additional weight which lumbermen are carrying over what they should legitimately carry.

To the second group nothing can be said which has not already occurred to them in their councils with themselves. There are, and probably always will be, men in every walk of life who wish to reap the benefits which somebody else is responsible for.

The Southern Hardwood Traffic Association represents ninety per cent of the trade in the South and at Ohio river crossings. This association, in fact, represents the hardwood industry of the South and should have the unqualified support of every hardwood shipper who cares at all what his lumber rates may be. If there is any hardwood shipper in this association's territory who is not convinced of the vital work the association is doing, let him make a conscientious effort to find out through direct communication with the association. It should take but a short time to convince anyone that to support this body is not only a moral obligation, but is an investment from which real dividends will be realized.

An Old Question Asked Anew

THE ETERNAL QUESTION used to be, who pays the tariff, the seller on the other side or the buyer on this? The antiprotectionists said that the buyer paid it; but the protectionists denied this and declared that the seller on the other side of the sea paid it. Politics controlled the observer's viewpoint in those days, and his viewpoint never changed until his politics changed.

A very similar question is now before the American public, except that it is wholly a domestic question and foreigners have no part in it. Who pays the three per cent war tax on freight bills, the man who sells the goods or the man who buys? At which end of the shipment must this tax be paid? For instance, if a shipper sells a carload of lumber to a distant customer, does the shipper or the buyer pay the tax? It is almost identical with the problem which was never settled satisfactorily to all in the old tariff controversy. In that case, the tariff was paid by the receiver of the goods. There was no doubt of that; but did he charge it back to the seller and take it out when he paid the bill?

In the case of the freight tax, neither the buyer nor the seller would object to paying it, if he could charge it up to the other man and make him pay it finally. But the question is, can he do this? Will the other man stand for it?

The only point which has been decided is that the government will collect the tax and that the shipment can be, and will be, held until the tax has been paid. The tax, like all other taxes since the creation of the world, except poll tax, is a lien on the property, and if not paid, the property can be sold to satisfy the claim. But that does not quite reach the nub of the matter. Suppose the seller refuses to pay and the buyer refuses to pay, and the marshal seizes the lumber and sells it for the tax. The purchaser under the tax sale will then own the lumber, and he cannot be molested by either the original seller or the original buyer. He will have the lumber; the marshal will have the tax money; and the original buyer and original seller will have nothing, except probably a law suit between them to determine which one must stand the loss.

One thing ought to be reasonably clear: the price of lumber may be raised to include the freight tax. When that is done, the buyer pays the tax when he pays for the lumber; and that being the case, he will object to paying it twice, first when he pays for the lumber, and again to the marshal who comes round with the tax bill before the lumber is released. If the seller of lumber adds the freight tax to the price, he will not count it a hardship if he pays the tax at his end of the line.

That might not solve the problem, for the seller might claim that he did not add the tax to the price, but that he had quoted a net price. That point would have to be settled by specific contract, to prevent troubles and misunderstandings later. The government will doubtless

use its own pleasure and consult its own convenience in deciding whether the tax will be collected at the point of shipment or at the point of delivery, and buyers and sellers will not have much to say about it.

Conservation and Water Power

THE DEMAND for close and consistent conservation, advocated by certain departments of the government, is criticised in the weekly letter issued November 2 by the National City Bank of New York. The thrust seems to be aimed at the Forest Service, on the ground that it is hindering the development of electrical power in the national forests, while power from coal is inadequate to the country's needs. The pith of the criticism is in the following paragraph:

To the extent that hydroelectric power is substituted, this consumption of coal and demand on transportation facilities will disappear. Unfortunately, although there are 40,000,000 to 50,000,000 horse-power of possible but unused water power in the country, most of it is under the jurisdiction of the Federal Government, and tied up so tight that practically no new development is being made. The running waters, which will flow forever are closely guarded, in the name of conservation, while the coal supplies are depleted.

This is not a new accusation, though the justness of it is open to question. There is no doubt that the drain on the available coal supplies would decrease in proportion to the increase in development of electric power from flowing water. A few years ago, during the flood of the conservation movement, fierce attacks were made upon the Forest Service because it opposed throwing open the water power sites to whoever would take them. The Forest Service's answer to these attacks was that corporations were trying to get hold of the electric power sites, to develop them for their own profit, and with the purpose of fleecing the public. In that controversy the Forest Service won out. The famous "Ballinger incident" hinged on that question. The public decided that it would be better that the power sites remain in the control of the government, rather than pass to private ownership.

The paragraph above quoted is the first intimation that the fight over water power is about to be reopened. Conditions are not the same now as they were ten years ago, and the advocates of giving the power sites away will be able to insist that such a course is expedient in the face of the coal shortage. There was no coal shortage ten years ago. It may not be easy to satisfy the public with a policy that withholds development (or exploitation?) of water power while coal is scarce and extremely high in price. No doubt the charge will again be made by the Forest Service that an attempt is about to be made to get possession of power sites by private corporations, and that charge will scarcely be disputed; but the fact remains that the government is holding that great resource and is making no movement toward developing the power now running to waste, and if a counter charge of a "dog in the manger" policy is made against the government, it may not be easy to answer it satisfactorily. At the time of the Ballinger affair, the question of developing the great water powers on national forests was more or less theoretical and academic; but it is intensely practical now.

Shying from Socialism

SOME OF THE TIMBER TRADES of England are much concerned over the prospect that the government will stay in the lumber business after the close of the war and insist on doing the buying and distributing of lumber, as it is doing now. It is held that such a policy will put out of business a large number of persons and firms heretofore engaged in the timber trades. The unfairness of a policy like that is pointed out, and it is claimed that if the business is to be taken away from traders in that manner, they should be remunerated for loss of capital and should also receive damages. That question is not yet confronting the lumbermen of the United States; yet it is easily conceivable that government control of business as a war measure might be tried later as a peace measure. It would, of course, be socialism of a radical kind. It has made no such progress in this country as it has in England. Conditions here are not the same as there. We do not import much of our timber; they import most of theirs.

Northern Lumbermen's Salesmanship Congress

Will Convene at Bay City, Mich., on Friday and Saturday, November 16 and 17—The Headquarters Will Be at the Wenonah Hotel and the Meetings Held at the Bay City Opera House

DON'T let the title of this congress confuse you. It bears the name "Northern Lumbermen's Salesmanship Congress," because the inspiration resulting in the first gathering at Merrill, Wis., last year came from the Northern salesmen and sales managers.

No region, nor any specific wood is to receive the full benefit that will come as the congress develops. Its originators conceived that ultimately all those in charge of selling lumber might come to adopt more progressive methods of merchandising.

To fully appreciate what it means, read the statement of the object of the congress, appearing across the bottom of this page.

The idea originating in northern sales forces will without question spread to take in the factors in selling in the North, East, South and West. It will embrace all of the commercial woods of the country and without question will some day be the most potent organization having to do with the lumber business. That is, potent in the things it can do which will directly and immediately affect the actual marketing of sawmill products.

The executive committee in charge of the arrangements for the congress is composed of: George C. Robson of the Kinzel Lumber Company, Merrill, Wis., chairman, W. M. Wrape, Kneeland-Bigelow Company, Bay City, Mich., H. S. Dewey, Edward Hines Lumber Company, Chicago, E. M. Holland, Cartier-Holland Lumber Company, Grand Rapids, Mich.

The general committee headed by Mr. Robson as chairman includes the following Michigan association members:

W. M. Wrape, chairman Michigan committee, which committee is composed also of: N. R. Wentworth, Ross & Wentworth, Bay City, Mich.; C. R. Abbott, Cummer-Diggins Company, Cadillac, Mich.; J. E. Dewey, Stearns Salt & Lumber Company, Ludington, Mich.; O. W. Hanson, Salling-Hanson Company, Grayling, Mich.; Geo. Strable, Strable Salt & Lumber Company, Saginaw, Mich.; Roy S. Richardson, Richardson Lumber Company, Alpena, Mich.; Geo. M. Clifton, Louis Sands Salt & Lumber

Company, Marquette, Mich.; Zero Nelson, Jackson & Finner, Cadillac, Mich.; R. W. Garity, Cobbs & Mitchell, Inc., Cadillac, Mich.; O. L. Larson, Bay City, Mich.; Lumber Company, Manistee, Mich.; J. P. Baehong, Northern Michigan Lumber Company, Gladstone, Mich.; H. M. Shaw, Salt Lake City, Utah; Lumber Company, Escanaba, Mich.; C. A. R. Townsend, The Munising Company, Munising, Mich.

H. S. Dewey of the Edward Hines Lumber Company, Chicago, Ill., is chairman of the Wisconsin association committee, the other members of it being:

C. H. Law, J. W. Wells Lumber Company, Menominee, Mich.; W. E. Vogelsang, Turtle Lake Lumber Company, Grand Rapids, Mich.; H. H. Butts, Park Falls Lumber Company, Park Falls, Wis.; J. R. McQuillan, Langlade Lumber Company, Antigo, Wis.; M. J. Fox, Von Platen Lumber Company, Iron Mountain, Mich.; Bruce Odell, Consolidated Lumber Company, Manistique, Mich.; A. R. Burton, Diamond Lumber Company, Green Bay, Wis.; J. E. Halpin, C. H. Worcester Company, Chicago, Ill.; J. J. Adams, Brooks & Ross Lumber Company, Schofield, Wis.; F. J. Burke, Northwestern Lumber Company, Stanley, Wis.; F. J. Darke, J. S. Stearns Lumber Company, Odanah, Wis.; Wm. J. Kessler, New Dells Lumber Company, Eau Claire, Wis.; C. A. Goodman, Sawyer-Goodman Company, Marinette, Wis.

There will be, as announced, a special train leaving Chicago at midnight on November 15, and on the return trip from Bay City, the delegates will stop off for a couple of hours at Camp Custer, Battle Creek, Mich., on Sunday morning.

If you have any interest at all in advancing the methods of selling lumber, and can possibly arrange to be present or be represented at the congress, you should do so.

This stop will have an especially interesting significance to the delegates. Camp Custer is the Michigan cantonment for the National Army. The supplying of the material for the structures was a job successfully executed by Michigan lumber operators and the success is in no small measure due to the greater harmony in northern lumber circles resulting from just such causes as the Salesmanship Congress. This will be the first opportunity most of the lumbermen have had to see the results of their work.

PROGRAM

FRIDAY AFTERNOON SESSION

2:00 P. M., November 16

Presiding Chairman, G. C. Robson, Kinzel Lumber Company, Merrill, Wis.

ADDRESS OF WELCOME—W. C. Hull, Traverse City, Mich., President Michigan Hardwood Manufacturers' Association.

OPENING REMARKS: "Why the Necessity of These Conferences"—Geo. C. Robson, Kinzel Lumber Company, Merrill, Wis.

"THESE CONFERENCES—PERSPECTIVE AND RETROSPECTIVE"—

Edward Hines, Edward Hines Lumber Company, Chicago, Ill.

"HOW WE DO IT AT CADILLAC"—"The City of Quality"—

Chas. R. Abbott, Cummer-Diggins Company, Cadillac, Mich.

"MERCHANDISING—PAST, PRESENT AND FUTURE"—

C. D. Burritt, Cadillac Lumber Company, Cadillac, Mich.

"THE RETAILER'S VIEWPOINT"—

Robt. K. Jardine, Robt. K. Jardine Lumber Company, Grand Rapids, Mich.

FRIDAY EVENING SESSION

7:00 P. M., November 16

Banquet—Given by the lumbermen of Bay City and Eastern Michigan. Mr. H. S. Dewey of the Edward Hines Lumber Co., Chicago, Ill., will act as toastmaster and Mr. Douglas Malloch of the "American Lumberman" will be the principal speaker with several other high class after-dinner speakers.

SATURDAY MORNING SESSION

10:00 A. M., November 17

Presiding Chairman, CHAS. R. ABBOTT, Cummer-Diggins Company, Cadillac, Mich.

"THE EVOLUTION OF HARDWOODS"—The Select Grade—Its Relative Value—W. L. Martin, Boyne City Lumber Company, Boyne City, Mich.

"WHOSE OX IS GORED"—

H. H. Butts, Park Falls Lumber Company, Park Falls, Wis.

"THE RELATIVE STRENGTH OF HEMLOCK AND HARDWOOD"—Illustrated with Lantern Slides—

O. T. Swan, Secretary of the Northern Hemlock and Hardwood Manufacturers' Association, Oshkosh, Wis.

"THE MERRILL CONFERENCE FROM A MICHIGAN VIEWPOINT"—

J. C. Knox, Secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.

"THE INDUSTRIAL CONSUMER'S VIEWPOINT"—

S. S. Stewart, W. F. Stewart Company, Flint, Mich.

"THE SALESMAN'S VIEWPOINT"—

Enos Colburn, Green Bay, Wis.

SATURDAY AFTERNOON SESSION

2:00 P. M., November 17

Presiding Chairman, H. S. DEWEY, Edward Hines Lumber Company, Chicago, Ill.

"THE MANUFACTURER'S VIEWPOINT"—

C. A. Goodman, Sawyer-Goodman Company, Marinette, Wis.

"THE WHOLESALE'S VIEWPOINT"—

E. M. Holland, Cartier-Holland Lumber Company, Grand Rapids, Mich.

"MOULDING THE DEMAND"—

J. S. Crosby, Crosby Agency, Chicago, Ill.

"GETTING AMMUNITION TO THE FIRING LINE"—

L. R. Putnam, Director of Advertising and Trade Extension, Southern Pine Association, New Orleans, La.

OBJECTS

To get together those vital forces of the Northern Lumber industry, "The Sales Organization and the Manufacturers," on one plane to investigate particularly the importance the sales department occupies in this great manufacturing business, with the idea of determining how we may better handle the selling and manufacturing departments with the one aim of marketing the greatest volume of lumber efficiently and intelligently.

To so handle these departments that we may make better satisfied customers.

To broaden the big field of intelligent salesmanship that is necessary under new conditions of marketing.

To work out plans for more co-operation between the selling and manufacturing departments and particularly between the firms who manufacture and sell Northern Lumber.

To foster the feeling of friendship and fellowship between the manufacturer of Lumber and those who purchase his products with the idea of greater co-operation in working out plans for better merchandising.

Reclassification of Lumber

It has been generally known among lumbermen that Examiner Fred Esch of the Interstate Commerce Commission has been at work for some months on a proposed scheme for the reclassification of lumber with regard to shipping rates. His work is nearing completion and the plan is ready for submission to the commission, where it will be duly considered. It may be adopted or rejected, or modified, but, at any event it will come up for discussion before that body. From advance proof sheets *HARDWOOD RECORD* is able to present a summary of the report.

All kinds of forest products which figure in interstate commerce are considered. Several classes are segregated for the purpose of fixing rates. First is lumber which takes one rate. The items which are classed as lumber are specified at great length, item by item. The next class includes items which take a rate 5 per cent above lumber; the next class takes a rate 10 per cent higher than lumber; the next 15 per cent higher, and the next 20 per cent. Millwork from the Pacific coast comes under a special class and is discussed at great length.

The matter of maximum and minimum carloads comes in for thorough consideration. In the introduction of his report, Mr. Esch presents a summary which covers the ground in a general way, but further on in the report he enters fully into particulars covering all phases of the subject. He takes up specifically the danger, as some see it, that discrimination will be shown between softwoods and hardwoods in fixing rates.

Mr. Esch's summary or synopsis of the report follows:

I suggest two alternative conclusions and indicate my preference for the second. The first alternative is based upon the present practice of the carriers of providing a single carload minimum weight in connection with the rates on lumber. The second presents a plan of different rates for different minima weights, which is an elaboration of a similar plan that was roughly outlined in the tentative conclusions submitted upon the argument and shortly before argument last December.

The first alternative now suggested presents a lumber list in which are given the commodity descriptions which is proposed for uniform adoption in all tariffs and which it is desirable to have adopted, no matter which alternative is adopted with respect to the ratings. This lumber list also shows the ratings suggested in the first alternative. The first alternative is based almost entirely upon differences in the loading per unit of space of the various commodities covered by the report. Commodities are given lumber rates or rates stated in percentages over lumber rates, in accordance with the comparative loading per unit of space of lumber and the commodity involved, as disclosed by the record in the case.

In connection with the first alternative considerable discussion is devoted in the suggested report to the question of whether or not value should be considered as a classification factor, and the conclusion is reached that with respect to the commodities involved, value may be almost entirely disregarded. In this respect the discussion of the first alternative prepares the way for the conclusions reached in the second alternative.

The original plan of different rates for different minima which was suggested in the tentative conclusions submitted at the time of the argument provided a set of carload minima weights, disassociated from cars of any particular size, to be applied in connection with the movement of lumber in cars of all descriptions. It is recognized in the report now submitted that the vital objection against that plan is that the equipment of carriers includes cars of varying capacity so that the weight which it is possible to load is dependent upon the size of the car furnished.

The plan now proposed is for a different set of minima for each particular size of car. A table is given of different minima for different size cars, wherein it is proposed that the present rates on lumber should be applied as base rates on loads of 19,500 pounds in cars of 1,300 cubic feet capacity, on loads of 45,000 pounds in cars of 3,000 cubic feet capacity and on loads of 67,000 pounds in cars of 4,500 cubic feet capacity, with like variations for cars of intermediate capacities. It is also suggested that it may be advisable to provide a different set of minima and rates for movement of lumber and lumber products on flat cars.

The report proper is contained in the first thirty pages and the remaining 41 pages constitute appendices referred to in the text. Among the appendices of particular interest is appendix 13 which discusses the effect upon the revenues of the carriers of a plan for different rates for different minima such as is suggested in the report. In this appendix an attempt is made to show, by using hypothetical cases, that the decrease in the carriers' revenues resulting from the lower rates which would be applied to lumber and lumber products, due to the incentive shippers

would consider the plan of different rates for different minima to load heavily and thereby secure lower rates, would be more than overcome by the saving in transportation costs due to the fewer cars which would be needed to move the same volume of freight.

PACIFIC COAST MILL WORK

It is proposed in the report to apply the adoption of the first or the second alternative, which ever is adopted, uniformly throughout the country, with one exception. This exception is with regard to millwork, which term is used to cover sash, doors and related commodities, from the Pacific Coast. In the first alternative the rate relationship of millwork to lumber that is suggested for the country at large is lumber rates plus 20 per cent, but it is suggested that from the Pacific Coast millwork should take lumber rates plus 15 per cent. This exception is due to the difference in the relative loading per unit of space of millwork and lumber from the Pacific Coast, as compared with millwork and lumber from the country at large. By that is meant that lumber from the north Pacific Coast will load, for purpose of illustration, say 56,000 pounds and millwork from that part of the coast will load 43,000 pounds, whereas lumber from the country at large may load 45,000 pounds and millwork from other sections than the Pacific Coast only 30,000 pounds. The rate relationship is different between these rates, which accounts for the difference in rating suggested.

In connection with the second alternative it is pointed out that further evidence is desired before the plan proposed may be applied and a list of questions is given indicating what further facts should be ascertained before such a plan is put into form. It is stated, however, in the report that the evidence as to the second alternative is full enough to warrant a determination at this time as to whether or not the fundamental idea therein contained is correct and is practicable of application.

Similar plans of different cars for different minima are referred to in appendixes 11 and 12, the first being taken from the brief submitted for the Southern Hardwood Traffic Association, Spoke Manufacturers' Association, National Implement and Vehicle Association, Hickory Products Association, Rim Manufacturers' Association and Hub Manufacturers' Association; and the second being contained in a letter addressed to a member of the commission by the vice president of a transcontinental line. (This reference is to Mr. Worthington of the Great Northern Railroad.)

Counsel for Mississippi valley and Wisconsin millwork interests contended that the relationship of millwork to lumber should be the same from the Pacific Coast as in other parts of the country. Millwork now takes one cent over the lumber rate from the Pacific Coast to Chicago. The 15 per cent plan would make the difference 8½ cents under my first alternative. Under the second alternative, if the same relative loading is maintained as between millwork and lumber that has been maintained in the past and upon which the rate relationship of lumber plus 15 per cent as the basis, the same rate relationship would result, but if Pacific Coast shippers should find it possible to load their millwork heavier their rate relationship would be more favorable to that extent. However, the rate relationship of sash and door manufacturers on the Mississippi River would be better than lumber plus 20 per cent, which would be just as though loaded heavier.

The second plan also gives the Pacific Coast manufacturer the advantage of mixing his millwork with lumber and it is possible that he may employ it in such a way as to secure upon mixed carload the same loading and the same rate as on lumber.

Regarding the fear of certain branches of the lumber industry that a plan of rates based on uniform minimum carload weights would be discriminatory against one branch or preferential toward another, I feel sure that the second alternative now suggested would be fair to all parties.

Appendix 7 goes into a full discussion of facts regarding agricultural implement and vehicle material. Appendix 8 takes up veneer and build-up wood and the question raised in the record whether veneer less than ¼ of an inch thick should pay a higher rate than veneer more than ¼ inch thick. The conclusion is that there should be no difference of rates made by the thickness of veneer. Appendix 9 covers the millwork question.

THE LUMBER LIST

Mr. Esch's list of lumber and items which take rates from 5 to 20 per cent higher is of great length and if published in full would fill three or four solid pages of *HARDWOOD RECORD*. It is possible, however, to shorten it considerably by grouping items instead of giving each its particular mention, and that is done in the following paragraphs, by segregating items taking rates higher than lumber, and considering all other as lumber.

LUMBER RATE PLUS 20 PER CENT

The following items and groups of items take the lumber rate plus 20 per cent:

Astragals, balusters, balustrade work, bases, column; beads, angle, corner, cornice; blinds, brackets, cornice; caps, column; casing, door and window, panel; ceiling, panel; columns, solid or hollow; cresting, doors,

except grain and coal doors, unglazed or glazed with common window glass or glass given the same rating as common window glass in the classification governing the tariff; doors, screen, with or without wire; frames, blind, door, screen, and window, s. u., with or without pulleys; grille work, house trimmings, n. o. s., interior or exterior, k. d.; jambs, panel; newels, ornaments, gable and post; panelwork, plasters, portiere work, railings and rails, risers, rosettes, sash, s. u., unglazed or glazed, with common window glass or glass given the same rating as common window glass in classification governing the tariff; screens, door and window, including wired; scroll work, shelves, k. d.; spindles, store fronts, treads, turned work entering into the construction of buildings, wainscoting, panel.

(If the foregoing items are shipped from the Pacific Coast the rate will be 15 per cent above lumber.)

Wooden water pipe.

LUMBER RATE PLUS 15 PER CENT

Built up wood when made from figured veneers or woods of value. Under this definition "woods of value" are:

Boxwood; Spanish cedar; cherry; cocobolo; ebony; granadilla; ironwood; lancewood; lignum-vite; mahogany; rosewood; sandalwood; satinwood; teakwood; vermillion; walnut.

Lasts, not further finished than rough turned; various items of millwork take the lumber rate plus 15 per cent when made of woods of value; dowel pins; curtain poles turned but not further finished; veneer when figured, from wood of any kind; wheelbarrow material, sawed, planed, turned, bent, bored, mitered, turned, but not primed, painted or ironed.

LUMBER RATE PLUS 10 PER CENT

Built up wood when made from figured veneer or from woods of value:

Cooling tower material, consisting of staves and other wooden parts used in the construction of cooling towers, and also iron or steel fixtures (the weight of the iron or steel articles not to exceed 20 per cent of the entire weight of load); cores for paper rolls; ice can and wash tub covers; crestring and cribbing; sucker rods not further finished than sawed, planed, or turned, without attachments; rollers, not further finished than sawed, planed, or turned to shape; ladder material; silo material, consisting of staves, doors, and other wooden materials used in the construction of silos; and also door hangers, iron bands, hoops, lugs, bolts, and other iron or steel parts (the weight of the iron or steel articles not to exceed 20 per cent of the entire weight); closet tanks; tank material, consisting of staves and other wooden parts used in the construction of tanks or vats, and also iron or steel fixtures, including gauge, iron or steel bands or hoops and lugs (the weight of the iron or steel articles not to exceed 20 per cent of the weight of the entire carload); trunk slats.

THE LUMBER RATE

All other items listed as forest products take the lumber rate. These items include a great variety of commodities from plain lumber down to by-products. Some of the rather unusual items are, ground tan bark, beehives, boughs, hoops, cordwood, fruit and vegetable packages, cooperage stock, kindling material, sawdust, pitch, turpentine drippings, logs, paving blocks.

(A) The charge on mixed carload shipments of two or more wooden articles that take different rates when shipped separately will be the rate applicable on the highest rated article or articles applied to the highest carload minimum weight provided for any article or articles taking the highest rate, provided the actual weight of the article or articles taking the highest carload class or rate is 10 per cent or more of the highest minimum carload weight provided for any of the articles taking the highest carload class or rate.

If the articles in the mixture are differently classified or rated in carloads and the actual weight of the article or articles taking the highest carload class or rate is less than 10 per cent of the highest minimum carload weight provided for any of such articles they will not be entitled to be included in the mixture, but will be separately charged at their l. e. l. rate or rates.

(B) If the aggregate charge upon any mixed carload shipment of articles differently classified or rated in carloads is less on basis of the l. e. l. rate for the article or articles taking the highest class or rate and on basis of the highest carload minimum weight on any article in the shipment than would accrue under paragraph (A), the shipment will be charged at the rate for the highest classed or rated article or articles and at the highest minimum carload weight for any article contained in the mixture.

(C) If all of the articles in the mixture take the same class or

rate, the minimum carload weight provided for any of the articles.

DISCRIMINATION DISCUSSED

Mr. Esch quotes with approval suggestions of the Southern Hardwood Freight Association that shippers be permitted to load cars of specific length and that a new rule be adopted for enforcement when the carrier can not furnish a car of the size called for, and that bills of lading show when a carload shipment is up to the capacity of the car truck, but not to the cubical capacity of the car. Regarding the fear of some lumbermen that discrimination would result between hardwood and softwood under the classification plan based on carload weight, Mr. Esch says in his report:

By some of the parties it has been claimed that because of the difference in density of different species of wood and the consequent ability to load one species heavier per unit of space than another unjust discrimination would result under a plan of different rates for different minima. Oak can obviously be loaded heavier than pine or hemlock, and if both species are produced side by side it is obvious that the shippers of oak can secure lower average rates because of their ability to load heavier per unit of space than the shippers of the other species mentioned. Discrimination, however, can arise only if there is competition between the lumber produced from different species, and in that connection it should be observed that as between the woods representing the two extremes, namely, the highest and the lowest density, competition is not general. But even where there is competition such as may arise between lower grades of oak and certain grades of pine, or between oak flooring and pine flooring, it does not appear that unjust discrimination must necessarily arise due to the fact that the shippers of oak can secure a lower average freight rate per 100 pounds under a plan of different rates for different minima than can shippers of pine. If there is competition there must be some close proximity of selling price. The selling price, however, is not based upon weight but is based upon the unit of 1,000 feet b. m. Consequently the fact that the rate on pine may on the average be more per 100 pounds than on oak will be counterbalanced by the fact that the weight of pine per 1,000 feet is less than the weight of oak per 1,000 feet. The freight charges per 1,000 feet will be substantially the same for the two species. Where there is competition between species, therefore, instead of being unjustly discriminatory to reflect differences in car loading, it would appear that the reverse would be the case. Moreover, it should be pointed out that the predominant production in each section is of lumber of approximately the same density.

Under the plan as modified the price of lumber will not be dependent upon the size of the order, as it would be under the plan originally proposed. Under the original plan a manufacturer in filling an order of lumber weighing 30,000 pounds would necessarily have to ask a somewhat higher delivered price than in filling an order weighing 50,000 pounds, since the freight rate would be higher for the former than for the latter. Under the modifications now proposed shippers will have substantially the same opportunity, whatever size car is furnished, to secure the lower rates provided for heavy loading.

MORE EVIDENCE WANTED

Mr. Esch denies the contention of many shippers and carriers that the reclassification plan favored by him is primarily a question of rates. Though it involves rates, he says that that is incidental. He dwells upon the fact that his plan would tend to cause full utilization of cars, a condition that would be most desirable in war time. The questions on which Examiner Esch thinks more evidence should be supplied are as follows:

- (1) (a) What loading per cubic foot fairly represents the average utilization of equipment in the transportation of lumber and lumber products in the past during normal periods?
- (b) Is there such a difference in the loading per cubic foot from different sections of the country as to require a difference in the basic minimum to be used in connection with present rates from these sections?
- (2) What is a proper gradation of rates and what is a proper grouping of sizes of cars to be observed in constructing a table of rates for different minima such as that given on page 20, supra?
- (3) What tare weights should be used in arriving at different rates for different minima upon the basis outlined?
- (4) To what extent may the shipper's choice of sizes of cars be limited?
- (5) What has been the experience of transcontinental carriers with regard to the operation of a two for one rule in connection with their cubical capacity minima and of shippers who have availed themselves of this rule?
- (6) (a) Should a separate table of different rates for different minima be constructed for shipments on flat cars?
- (b) On what basis should the rates provided in such a table be related to the rates provided for movements in box cars?
- (c) On what basis should the rates provided in such a table be related to each other?
- (d) What tare weights should be used in figuring the rate relationships for shipments on flat cars?

67. Will the effect on the revenues of different rates for different products be such as to require a readjustment of base rates in order to insure earnings to compensate for revenue from this traffic?

As appendices in addition to those mentioned by Mr. Esch in his statement above, he copies with his report lumber lists proposed

by railroads and arguments in favor of various points made in his report together with discussions of many points. Mr. Esch presents a table relative to agricultural implement and vehicle material, showing the rate relationship to lumber and the values per ton for the mill.

Labor and Cars Menace in South

The car situation at Memphis is steadily growing worse and lumber interests realize that they are confronting conditions which will tax their ingenuity and patience almost to the breaking point. The movement of cotton is at its height and the quantity of freight being handled by the railroads in connection with the military program of the government is larger now than at any time since a state of war with Germany was declared. The railroads are making strenuous efforts to cope with the situation but they frankly confess that there is not enough equipment to take care of all the traffic that is being offered by the government and private industry. Government requirements are receiving first consideration and private industry is already beginning to suffer seriously in a number of instances. Lumber interests have been anticipating a renewal of the car shortage of the summer and they are not surprised at the development. But they are suffering just the same as if they had not anticipated it, and present indications are that matters will become still worse before there is any relief forthcoming. At least this is the view taken by J. H. Townshend and other officials of the Southern Hardwood Traffic Association.

There is already a quite noteworthy shortage of flat cars for handling logs to the mills. Complaints to this effect are coming in from every part of the Mississippi valley territory. Some of the mills in Memphis are on the edge of barely full operations right now and a little longer continuance of the car shortage will mean running on partial time so far as they are concerned. Practically all the mills not owning their own equipment, which operated night and day for quite a number of weeks, have been forced to cut out night shifts. They will be delighted if they are able to run one full shift in the day time. Some are not getting enough logs for that and it is regarded as probable that quite a number will be in that category in a very short time. There are practically no reserve supplies of logs at the mills here or elsewhere in the valley region and the mills are therefore largely dependent on their daily receipts. The extent to which they will be able to operate will therefore be determined largely by the number of cars they are able to secure for handling logs. A serious curtailment of production of hardwood lumber is therefore regarded by the majority as virtually certain within the very near future. Reports from points in Arkansas and Mississippi indicate a growing scarcity of cars and a growing falling off in the quantity of lumber being produced. Similar conditions doubtless obtain in all the remainder of the southern hardwood manufacturing region.

According to officials of the Southern Hardwood Traffic Association, the Illinois Central and Yazoo & Mississippi Valley roads are furnishing lumber interests at Memphis about 60 to 70 per cent of their requirements in the way of outbound cars. Other lines entering this city are furnishing considerably less. Reports from Arkansas, Louisiana and Mississippi suggest that lumber manufacturers and distributors are up against a real shortage of box cars and other equipment for handling shipments of lumber and forest products. Embargoes are added to other troubles of the lumbermen though these are not quite so conspicuous now as they were at times during the late spring and early summer. Box cars for shipping high-grade oak and other lumber, as well as veneers, are very scarce and the movement of products of this character is being very decidedly restricted. And, as is the case with gondolas and other open equipment, it is the belief of the authorities that conditions will become distinctly worse before there is room for any

improvement. The association is doing all it can but realizes that chances of successful work in the direction of relief are anything but encouraging at the moment.

The priority board has issued a ruling within the past few days that will tend to hurt the lumber industry to an appreciable extent. This prohibits the roads from furnishing gondola cars for the handling of gravel, sand or any other material used in the building of public highways and streets, houses of amusement, pleasure vehicles and furniture. A considerable percentage of hardwood lumber manufactured in the South goes into pleasure cars, into amusement houses and into furniture and this ruling of the board means elimination of outlets, the loss of which means much to the lumbermen.

Practically ideal weather has obtained recently for work in the woods, but this has been held in check by the pronounced shortage of labor. Labor conditions are far worse, from the standpoint of the lumber manufacturer, than they have ever been, and, with more men to be called to the colors under the selective draft law, it is anticipated that they must become much worse. Every industry complains of the shortage of labor and the lumbermen are experiencing a scarcity which threatens to be a most conspicuous factor in holding down both logging operations and lumber manufacture.

Severe Test for Railroads

On October 1 this year the number of unfilled requisitions for railway cars exceeded the number of surplus cars at various points in the country by 70,380. "This figure," says the Railway Age Gazette, "is less than half as large as was the similar figure for May 1, but within the next few weeks the traffic undoubtedly will greatly further increase, and as general transportation conditions probably will grow more and more unfavorable, it is evident that the time has come when the Railroads' War Board, the managements of the individual railways, the railway employees, the shipping and receiving public and those having charge of shipments for the government, must put forth an effort approaching the superhuman if the railways are to be enabled to handle all the traffic available."

Within the past eighteen months the railroads of the country have increased their facilities to an extent which would have been impossible a few years ago. They handled nearly fifty per cent more traffic with each car and each locomotive than they did in an equal time two years ago.

But the unprecedented increase in traffic which began about two years ago continues unabated. The roads are handling at the present time not only a heavier passenger and freight traffic than they ever did in any previous year, but also a much heavier total traffic than they have at any previous time in 1917. Furthermore, the movement of traffic in the fall and winter months is normally heavier than at any other time of the year, and the present year promises to be no exception to the usual rule, if one may judge by the manner in which the country's transportation business is shaping itself.

This enormous strain has had its effect on the rolling stock of the railroads. The cars and engines are not in good condition generally, and the same might be said of tracks. The roads face a supreme test and their ability to meet it will have much to do with business success and the winning of the war.

That there may be no doubt or confusion as to the prevailing stumpage values of 1913 in Wisconsin and upper Michigan, it has been suggested that our association, thru its secretary, take up this subject with each of our members so that the judgment and records and knowledge of each of our members concerning these values may be compared one with the others and these values standardized.

Mr. Goodman here interjected the statement that in his opinion stumpage values for 1913 should be figured as follows: Northern pine, \$13; Norway, \$9; hemlock, \$3; basswood, \$8; elm, \$6; birch, \$4; maple, \$2; ash \$1; spruce, \$8; balsam, \$4; poplar, \$3; cedar, \$4; tamarack, \$3; beech, \$2; oak, \$8.

So far as the problems of accounting are concerned with reference to the making of income returns, I advise waiting until we have the instructions from the Treasury Department.

Afternoon Session

The afternoon session was opened with a vicious attack on booze. The growing scarcity and decreasing efficiency of woods and sawmill labor is rapidly bringing to lumbermen a realization of the absolute necessity for conserving the available man power to the utmost. The arguments against liquor were advanced by John Stange, paper manufacturer of Menasha, Wis., and formerly a member of the retail lumber trade, and by William C. Evjue of the Wisconsin legislature. Their arguments were based not upon abstract moral principles but upon questions of sound, economic merit. They presented figures compiled through practical demonstrations tending to show the actual decrease in efficiency and loss in money due to lessened productive power resulting from the use of liquor in woods and sawmill operations. They were supported by statements from some of the manufacturers present, who, because of local option dry laws in their respective communities, were able to cite specific instances of the benefits from prohibition in industrial centers.

Representative Evjue in his talk stated that the grain used in the manufacture of beer and other liquors in 1916 was sufficient to have made 3,320,000 half loaves of bread daily during that year.

One argument presented was that where liquor reigns in industrial centers there also will be found the hotbed of I. W. W. agitation, and that legislation or action against liquor is directly action against I. W. W. propaganda. The Fox River Valley Efficiency League is working to this end through a campaign tending to educate the working element to the principals and economic reasons for prohibition. This movement was explained in detail and the members individually and collectively were solicited for their support of the movement. Several members joined therewith and the matter was left up to the discretion of the board of directors as to whether or not the association will support the movement as a body.

MISCELLANEOUS DISCUSSIONS

There followed a report by M. P. McCullough, chairman of the committee on trade extension, and action authorizing the purchase of a liberty bond of a denomination to be determined by the board of directors. It was also agreed that members will accept liberty bonds in payment of lumber invoices.

There was quite a discussion of logging questions and of the development of various Wisconsin and upper Michigan logging associations. The principal speakers were P. S. McLurg of Phillips and A. J. Stange of Merrill. Mr. Stange gave a detailed report on what is being accomplished by the logging association and what its aims are. The loggers, according to the report, are looking to the consummation of uniform wage scale, uniform camp menus, prevention of logging accidents, standardization of logging railroads, determining of production costs in logging, sanitary camp construction.

One feature which Mr. Stange says is rapidly eliminating the bum who, after securing free Sunday board disappears on Monday, is the requirement of a two-dollar deposit by workers appearing on Saturday. This deposit is not refunded until the worker has been employed for a week.

The question of splitting the grade No. 3 hemlock into a yard and a box and crating grade, the association referred to the grading bureau and recommended the plan suggested by Chief Inspector McDonald.

Edward Hines led the discussion on market conditions and emphasized his statement that no one thing is so powerful an influence in retarding fair values as lack of knowledge on stumpage and manufacturing cost.

President Lingle appointed a committee of two to report on a plan for determining manufacturing cost.

There followed talks by C. H. Worcester, Chicago, on the handling of lumber supply at Washington, and by G. C. Robson, Merrill, Wis., on the coming salesmanship congress at Bay City.

H. H. Butts, chairman of the bureau of educational and statistical information, gave a very favorable report on hemlock and hardwood statistics. He read the following table:

	1 Inch and Up No. 3 and Better.		Oct. 1, 1917	
	Michigan	Wisconsin	Michigan	Wisconsin
Unsold ash	1,854,000	4,059,000	1,060,000	4,196,000
Unsold bass	8,036,000	16,163,000	6,512,000	12,905,000
Unsold birch	10,979,000	57,081,000	14,733,000	44,103,000
Unsold rock elm	790,000	2,141,000	393,000	1,196,000
Unsold soft elm	5,886,000	9,252,000	6,180,000	11,010,000
Unsold maple (this is H&S maple)	47,102,000	26,538,000	57,954,000	25,448,000
Unsold soft maple		2,933,000		2,415,000
Unsold oak		1,032,000		3,193,000
	74,647,000	120,099,000	86,832,000	104,466,000
		74,647,000		86,832,000
Grand total Wis. & Mich.	194,746,000			191,298,000

No. 3 Common Hardwoods Unsold.			
Unsold ash	766,000	1,286,000	672,000
Unsold bass	2,309,000	4,830,000	3,063,000
Unsold birch	2,609,000	20,413,000	7,177,000
Unsold rock elm	609,000	1,429,000	95,000
Unsold soft elm	1,791,000	4,619,000	2,183,000
Unsold hard maple	13,303,000	10,980,000	40,088,000
Unsold soft maple		945,000	
Unsold oak		680,000	
	21,387,000	45,182,000	53,278,000
		21,387,000	53,278,000
Grand totals	66,569,000		107,729,000

There followed brief talk by Secretary O. T. Swan, who in turn was followed by the resolution committee, which presented resolutions on the recent death of United States Senator Hall Husting of Wisconsin. Resolutions were presented favoring national and state prohibition.

At the close of the meeting a dispatch was sent to George E. Foster, treasurer of the association, who is recuperating at a Wausau hospital from an attack of blood poisoning.

More Lumbermen Wanted

The lumber operators of the United States have an opportunity of assisting materially in the success of the war. This can be done by aiding in recruiting for the 20th Engineers, which is a unit now being organized for the purpose of cutting lumber of all sorts in the forests of France. From the reports received on all sides it appears that the lack of transportation gives the War Department authorities more trouble than any other single thing, consequently in order to save the space on transports now being used to transport abroad, there are being organized forestry battalions for the purpose of cutting this lumber on the other side.

At first thought, it would seem to the selfish man that any assistance given by him to this project would result in decrease of his sales; but when it is remembered that the amount used abroad is so little that it is not even considered by any lumber manufacturer, even the most selfish would not hold back on that account.

All lumber operators can assist. To do this, they should write to any man who has been drafted from their works and urge him to ask that he be transferred or assigned to the 20th Engineers, Washington, D. C.

A copy of this request should be sent to the commanding officer, 20th Engineers, American University, Washington, D. C., as no recruits are accepted in the 20th Engineers unless they have had actual experience in lumber or logging operations.

The 20th Engineers will consist of 10 battalions and 9 service battalions, and when completed will be the largest regiment in the world, amounting to seventeen thousand men.

Momentous Happenings at Washington Vital to Lumbermen

Can't Ship in Open Top Cars; Lumber Committee Given Great Powers and Warmly Commended

Developments in the war situation here of special interest to the lumber industry include the reorganization of the committee on lumber, Council of National Defense; the inauguration of a movement to have labor employed in sawmills on government work exempt from the draft; the announcement that spruce and fir logging on the Pacific coast is to be run by the government so as to insure adequate supplies of airplane stock; the framing of a new order for commandeering ship timbers; the "signing of the pledge" by ship schedule cutters to speed up; an official recommendation approved by the president that the government undertake to meet the housing problem; plans for curtailing nonessential industries; decision by leading business interests in favor of further government price control and additional railroad legislation, and restriction of the use of open top cars for carrying certain articles.

Can't Use Open Top Cars

Airplane wood has to be 100 per cent perfect. It is estimated by the Forest Service that only 13 per cent of Sitka spruce is good enough for airplane stock, 10 per cent of Port Orford cedar, 8 per cent of Virginia spruce and 5 per cent from Maine spruce. According to an airplane builder not more than 167 feet of lumber out of 1000 goes into airplane construction. Few airplanes contain less than 250 feet and it may take 2000 feet in the rough to furnish this. For propeller blades ash and white oak are used largely, mahogany, spruce and black walnut quite a bit, and maple, birch and cherry to some extent.

That great quantities of lumber are necessary to carry out the airplane construction program here and abroad is evident from a recent statement by Lord Northcliffe, head of the British war mission, that one Detroit firm is able to make 1000 sets of airplane wings daily and that "the entire cities of Grand Rapids and South Bend, which are devoted to furniture making, are willing to manufacture the woodwork of airplanes."

Judge Lovett, railroad priority commissioner for the president, has instructed railroads not to furnish open top cars for carrying certain articles unless it be for government purposes. Under this order it is understood hardwood trim, pleasure vehicle and furniture stock and material for making musical instruments, and the finished products themselves will be limited in shipment to certain closed cars in the interest of "the national defense and security."

The essential features of the order are as follows:

Whereas it has been made to appear and the President, through the undersigned, finds that open top cars (other than flat cars and cars assigned to work service) suitable for the transportation of coal, coke, ore, limestone, sugar beets, sugar cane, sorghum cane, and raw materials for use in the metal, sugar and fertilizer industries, and other commodities necessary to the national defense and security are being utilized in the transportation of the less essential commodities and articles hereinafter specified to such an extent as materially to interfere with the transportation of the aforesaid commodities required in the conduct of industries necessary in the prosecution of the present war.

Now, therefore, by reason of the premises the undersigned, in the name of the President, orders and directs that, on and after the first day of November, 1917, and until further order of the undersigned, all common carriers by railroad in the United States in the distribution of open top cars, other than flat cars, and in the transportation of freight in such cars shall deny the use of open top freight cars other than flat cars to shipments of the following commodities and articles, except in shipments for the United States Government, viz:

1. Materials and supplies, other than coal, for the construction, maintenance, or repair of public or private highways, roadways, streets or sidewalks.
2. Materials and supplies, other than coal, for the construction, maintenance, or repair of theatres or other buildings, or structures to be used for amusement purposes.
3. Materials and supplies, other than coal, for the manufacture of pleasure vehicles, furniture or musical instruments.
4. Passenger vehicles, furniture and musical instruments, which articles the undersigned finds are not essential to the national defense and security.

A Compliment to Lumber Committee

Under the so-called food control law it became necessary to change the status of the lumber committee because of the provision that no employe or advisor of the government should participate

in the administration of the law. When the lumber committee was created under the Council of National Defense organization for advisory purposes have been converted merely into bodies representing the industries from which their membership is taken. This plan, however, did not suit the powers that be in the council, which think exceedingly well of the lumber committee.

It was therefore arranged that the war industries board of the council should practically absorb the lumber committee. R. H. Downman, chairman of the committee and president of the National Lumber Manufacturers' Association, will be designated as assistant commissioner for raw materials under Bernard M. Baruch, who has charge of the raw materials branch of the war industries board. Mr. Downman takes with him as assistants several of the most active members of the lumber committee, it is understood, including F. G. Wisner, of the Eastman, Gardiner Lumber Company; C. H. Worcester of Chicago; E. A. Selfridge of the California Redwood Association, to whom will be added a representative of the hardwood industry, according to the present plan. These gentlemen will give their services to the government and will be supplied with adequate office facilities, clerical and expert assistance, etc., by the council.

Vast Power Vested in Downman

The lumber branch of the war industries board will practically control the purchase of lumber, wood of various kinds and various specialized products, for the war purposes of the government and for the allies of America. The power and authority of Messrs. Downman, Wisner et al. will be vastly increased, it is expected. The Navy Department is expected to purchase materials in most lines through the war industries board joint purchasing agency. And all branches of the War Department are expected to get in the game. The job cut out for Mr. Downman, which is practically lumber purchasing agent for governments representing four-fifths of the civilized world, is a big one and he and his assistants are drafted for the period of the war.

This signal honor paid the lumber committee alone of all the committees in the defense council organization followed severe attacks upon it recently, on account of alleged undue delay in filling orders for shipyard material, bad judgment and favoritism charged to have been shown in placing orders for such material, and other alleged misdeeds. These charges have been repudiated by the committee and its friends, by the shipping board officials, by Mr. Baruch, high army officials and the Secretary of War himself, all of whom have the highest opinion of the committee and its work.

Would Exempt Lumber Workers

One of the big problems confronting the lumber industry is the enforcement of the army draft. Steps are being taken to at the proper time lay before the army and administration authorities claims for exempting from the next and succeeding drafts workmen employed in sawmills cutting ship schedules and turning out other material for the government. It is asserted that the lumber industry is one of the most essential and lumbermen hope that it will be so classed by the government people in making the next draft, so that men from the ranks of sawmill workers will not be called for military service until employees of other and less essential industries are called. Pending action on the exemption claim it is understood that employers in the lumber industry are arranging plans to keep their men busy partly by appealing to their patriotism.

Speeding Up Ship Schedules

Lumber suitable for ship construction is to be commandeered by the shipping board under a new order of embargo down to the size 10'x2" 20' long and longer.

This order is said to be necessary to meet the situation caused by a few alleged slackers. The situation is reported to have re-

sulted in a threat by the shipping board that it would take over on less than a week's notice certain lumber mills in the South unless shipments of yellow pine ship stock were speeded up. That threat brought a distinguished committee to Washington, including the most representative and prominent men in the southern pine industry, who spent a day or two in conference with the shipping board and other officials.

The conferences closed with the understanding that the lumbermen would hasten the delivery of 250 ship schedules by December 31, 1918, if possible; that an average price of \$40 per 1000 feet would be paid for the material in the first 100 ships as in the second 150; that ship schedules will be split up among two or more mills where certain mills can cut some items in the schedule and not others; that planking and other ship material must be heartwood where two surfaces touch each other; that the heartwood items will be paid for at increased item prices; that shipments of pine ship stock if possible will approximate the 100 carloads per day needed instead of the 50 or 60 now being shipped, according to W. J. Haynen, assistant purchasing agent for the Emergency Fleet Corporation of the shipping board; that further changes in the ship schedule will not be made unless asked for by the lumbermen; that orders and deliveries will be systematized and redistributed; that ship stock will have priority in cutting and in shipment.

W. M. Ritter of the W. M. Ritter Lumber Company, Columbus, O., was in Washington recently with the lumber committee of which he is a member. He reported that he found orders for hardwood ship schedules being taken care of satisfactorily by the individual mills, wholesalers and other organizations with which they were placed because the shipping board purchasing officials and the Southern Hardwood Emergency Bureau could not agree about the price of hardwood ship stock. Mr. Ritter intimated that it is difficult for the hardwood bureau to get government business because much of the government's demands for hardwood are for very special products. Some of them are manufactured and remanufactured.

Suggest New Wooden Ship Design

However, it is thought there may be opportunity for the sale of more hardwood ship stock in the scheme hatched by W. H. Sullivan of the Great Southern Lumber Company, and the Gildersleeve Shipbuilding Company of Gildersleeve, Conn. Plans are being prepared in accordance with this scheme for the construction of a standardized wooden ship of 2000 tons which will be submitted to the shipping board with the statement that the materials, yellow pine and hardwood, for such ships can be furnished by the lumber industry at the rate of 500 ships per year.

According to information obtained at the shipping board, the wooden ship building program is only 20 ships behind schedule time, compared with 85 ships behind schedule time when Hurley and Admiral Capps succeeded William Denman and Gen. Goethals. American shipbuilding has increased twelvefold during the year, it is declared, and Mr. Hurley announces that 1,000,000 tons of shipping will be constructed before March 1.

Ship inspectors have been rejecting certain ship stock which did not come up to specifications of the shipping board, although the stock passed the trade association inspectors. Aside from this the only definite thing heard of late out of way in connection with government war lumber business is that a certain quantity of railroad ties were purchased for preliminary construction work at Hog Island, Pa., where the government is to have a big fabricated steel shipbuilding plant constructed by the American International Company. Certain ties, it is understood, were purchased on the open market in order to hasten delivery and some were not of very good quality, said to be mixed oak ties, but shipping board purchasing officers say that none of the ties purchased fell below specifications, although specifications may have been somewhat low.

Lumbermen Make Great Record

The lumber committee placed orders for a lot of switch ties in pine and for some sap pine ties, it is said, which were for temporary

use at Hog Island. The Georgia-Florida Yellow Pine Emergency Bureau received orders for 30,000 ties for the same job. It also got orders for thousands of piles for Hog Island, at 8 cents apiece, the contract for piling having been withdrawn from local jobbers at Philadelphia.

The lumber committee realizes that it is human and not free from error occasionally, but with pride the fact is pointed out that 48,000 carloads of lumber have been shipped for government purposes on orders placed through the committee. It is paradoxical but true, say members of the committee, that the lumbermen have gotten more out of the government orders and the government has still gotten its lumber cheaper, than if the committee had not been in existence. This has been due to the elimination of middlemen and the prevention of cut throat competition and price cutting, it is said, and at the same time has produced prompt deliveries and generally satisfactory results.

Will Base Price on Accurate Cost Figures

A number of the lumbermen had a hearing afterwards with the federal trade commission about the investigation of the cost of production of lumber. The lumbermen had withdrawn their waivers of hearing and there was a discussion of the factors entering into the cost of production, in the commission's investigation. Some points of difference developed. It was learned that the commission has made a preliminary report to the shipping board on lumber production cost so far as ship stock is concerned.

Further government control of prices was voted for in a referendum of members of the national chamber of commerce which resulted in adoption of the report of a special committee on the question on which the lumber industry was represented by C. S. Keith, president of the Southern Pine Association. Additional railroad legislation along the line of regulating the issuance of securities and federal incorporation of railroads has also been voted for by the chamber's members in a referendum based on the report of a committee on which R. H. Downman represented the lumber industry.

May Curtail Furniture Industry

Following the declaration that business enterprises should be judged by whether they tend to promote victory in the war, the Council of National Defense has taken up a study of the industries of the country with a view to deciding which are non-essential and should therefore be curtailed to some extent or transformed into more essential production. One of the industries to be curtailed or diverted into other lines of production, it is reported, is the furniture industry, which will be expected to furnish airplane woodwork and other war equipment. The consumption of furniture is said to have been curtailed.

Lumbermen are hopeful that they will get a whack at the possible new field of government business or semi-government business opened up by the report of the committee on housing of the Council of National Defense. The committee's report, which has been approved by the president, recommends the creation of a special housing commission to cooperate with communities where housing facilities are needed for workmen on government shipbuilding and war contracts. Under the plan approved the government would provide funds for the construction of such houses.

New Wood Uses Revealed

Other new fields of government business are opening up. Hundreds of millions of feet of lumber will be required for collapsible or portable houses for American military uses in Europe. The army wants 15,000,000 feet immediately for this purpose. Seventy-five million feet will be needed for hospitals alone. The navy wants 250 collapsible buildings to cost \$240,000, also for export. Lumbermen say that the stuff produced "on the side" in cutting ship schedules can be used in making portable houses. It is understood that sections or panels for the houses are to be made right at the sawmills as is being done now at the Eastman-Gardiner plant and the Long-Bell plant. The Burton Company has a contract for a number of portable houses for the government, requiring, it is estimated, 30,000,000 feet. The buildings now being

planned for will be for barracks and quarters for the officers and men of the American expeditionary forces in France. The Southern Pine Emergency Bureau is reported to have received orders for 10,000,000 feet of lumber in collapsible house form. The panels will be made to fit together into units, which can be combined or used separately according to the number of men to be housed.

Wood paving blocks is one of the latest demands of the government. They are to be used to floor a huge munitions plant to be built near Washington, it is reported—39,000 square yards will be required.

Several million feet of lumber have recently been placed through the lumber committee for American military purposes abroad. It included long timbers for derricks and booms and heavy stuff for the construction of barges, etc.

It has developed that while ammunition boxes are being used in large numbers for small arms cartridges and for shells for rapid firing guns, shells over four inches in diameter for the American and allied armies in Europe are being and will continue to be shipped in individual carriers made of wicker or similar material. It is stated that they pack well in that form, and that the cost of the carriers is less than boxes cost.

Ten thousand trucks of the new standard type have been ordered recently, besides the 35,000 or more ordered earlier in the war. The standard truck, it is stated, has a body of the same type as that in the older trucks, as the wood part of the trucks was deemed entirely satisfactory. Only the motors needed improvement, it was said. The bodies of the new trucks, as of the old, it is reported, will use some oak, gum, ash, hickory and yellow pine.

Doom Wood in Body Construction

Leading engineer authorities say that wood will pass from use in the manufacture of wheels and bodies of automobiles. Steel bodies are being substituted, it is said, and steel and wire wheels. The substitution is said to be more general proportionately, in the United States than in Europe, although the wheel stock originates in America largely.

An official statement given out through government channels here contains a technical description of the Austrian airplane Hansa Brandenburg No. 4, captured by allied troops.

Compute Efficiency of Lumber Labor

The United States Department of Labor, Bureau of Labor Statistics, has been making a study of productivity and cost of labor in the lumber industry and will publish a complete report on the subject. A preliminary statement relative to it, by Benjamin M. Squires, has been issued by the department. Mr. Squires discusses the desirability of figures showing the actual facts about labor capacity and cost in many important industries as a means of checking up on the efficiency of business, the prices at which products should be sold, profits actually made, etc.; also as tending to bring capital and labor closer together. The time record is expressed in one-man hours, the output record in 1000 board feet of lumber. The number of one-man hours necessary to produce a given quantity of output is the time cost, the quantity of output in a given time is the productivity of labor. In his preliminary statement Mr. Squires says:

The work was complicated by a lack of uniformity as between establishments in the classification of processes, by an inadequate distribution of time and of wages, by variations in methods of manufacture, and by incomplete records of output. It should be stated, too, that the unit of output—1,000 board feet—represents a variable quantity of labor on account of differences in prevailing sizes of trees, in the dimensions of lumber sawed, in kinds of timber, and in the methods of production and handling the finished product.

In order, therefore, that a comparison might be made as between establishments, it was necessary (1) to adopt rather arbitrarily a classification of processes and to determine what occupations or machines should be included in each process; (2) to select those establishments in which a distribution of time and of wages was made and a record of output kept; and (3) to indicate for each establishment the equipment in machines and the character of the output.

It is realized that to attempt to express the amount of work done by a man who is felling trees in the forests, or is sawing these trees into log lengths after they are felled, in terms of board feet in the lumber pile does not give a very clear idea of the amount of work performed by

him. An attempt is made to express the amount of work done by a man in terms of board feet of lumber produced, but it is recognized that this is not a very accurate measure of the work done. The average diameter and merchantable length were determined at the mill, and the length was measured under these circumstances. Since these trees were measured under these circumstances, they tend to appear in the table in about the proportion in which they were used by the loggers. The average diameter and merchantable length of the trees used in the lumbering industry in the United States in 1916 were 24 inches and 48 feet, respectively. The average diameter and merchantable length of the trees used in the lumbering industry in the United States in 1917 were 24 inches and 48 feet, respectively.

A table presented by Mr. Squires shows that a logging company estimated the average yield per tree in board feet lumber measure of white oak at 245, and 24 feet as the average length in feet of that portion of the tree used for lumber, whereas the forestry bureau's estimate on this timber is 560 feet average yield, average length of tree used for lumber as 48 feet and average diameter tree outside bark 4.5 feet above ground at 24 inches.

The only other hardwood covered in the table is yellow poplar as to which the same logging establishment estimated 350 feet as the average yield per tree and 50 feet as the average length used for lumber, while the forest service estimated 1000 feet and 64 feet as the figures for corresponding items and 30 inches as the diameter of the tree cut for lumber.

These tables give facts about the time and pay and productivity of employees of the several classes of employees in each establishment in the various classes of work like scaling, felling and log making, skidding, yarding and loading, transportation and unloading, maintenance of transportation, sawmills and their different operations, refuse disposal, machine attention, repairs, etc., sorting, yarding green lumber, log pond or yard, sawmill deck, edging, band and gang saws, trimming, night watch and fire protection, power and oiling, cleanup and miscellaneous work.

Information on these points is given under headings like total one-man hours, total wages, total output, output per one man hour, wage cost per one-man hour, cost per 1000 feet in one-man hours and in wages, etc.

Late Wires from Washington

About 2,500 men were recently training in three or four battalions of the second forestry regiment at Camp American University here. Most of them are from the Pacific coast, although practically every state is represented in the regiment, which includes also men from Hawaii, India, Scandinavia and other countries. Many of them came from the drafted army cantonments. The men have been doing the infantry drill, marching and hiking around the country.

Their daily routine has included five drill periods of an hour to an hour and a half each, besides guard mount, inspections, French lessons, conferences, lectures, study, school for the officers, etc. The day begins with reveille at 6 a. m. and does not close until 10 p. m.

There are only two or three regular army officers in the regiment so far and they will stay here with headquarters, it is expected, to organize succeeding battalions. The other officers are chiefly sawmill men and logging operators, some of them connected with well known lumber concerns. Following is a list of the officers so far announced:

Regimental Headquarters—Col. W. A. Mitchell, commanding officer; Major E. H. Marks, acting lieutenant colonel; Capt. H. L. Bowlby, regimental adjutant; Capt. F. N. Bartelme, regimental engineer officer; Capt. P. E. Hinkley, regimental supply officer.

Medical Detachment—Major W. C. Moore, First Lieutenants R. B. Hill and J. B. Swafford.

Dental Department—First Lieutenants R. F. Roudybrush, C. P. Patriek, Veterinary Detachment—First Lieut. J. W. Herbett.

Chaplain—First Lieut. C. W. Smith.

First Battalion Headquarters—Major E. E. Bartwick, Capt. L. H. Phil, adjutant; Capt. Harry V. Campbell, engineering officer; First Lieut. L. J. Freedman, supply officer.

Company A—Capt. Arthur W. Elam, First Lieutenants Germain P. Graham, James C. Williams, Duncan P. Shaw; Second Lieutenants J. E. Cuno and Roy L. Chaffin.

Company B—Capt. Andrew J. Fisk, First Lieutenants Harold C. Lyons, Wm. A. Clark, Thomas W. Poinexter; Second Lieutenants Arthur N. Dripps, I. B. McDaniel.

Company C—Captain H. W. Beetzkes, First Lieutenants W. J. Wilson, J. Leroy Wood, R. N. Banjamin; Second Lieutenants H. T. Hopkins, Holister Johnson.

An Efficiency Problem

Difficulties Which the Successful Veneer Manufacturer Must Overcome.

HERE IS AN EFFICIENCY problem mixed up with the conditions of temperature and moisture peculiar to the veneer cutting industry. Authorities on accident prevention point to the veneer industry as being hazardous. They claim the hazard in the veneer plant is three times as great as that in the average machine shop, and base this claim on the statement that risk companies charge three times the premium for casualty insurance in veneer plants that is charged for the average machine shop.

In a safety appliance supplement of American Industries devoted to accident prevention, the point is made that many accidents in the veneer plant are due to fatigue resulting largely from abnormal conditions of temperature and humidity. It is recommended that veneer manufacturers take some steps to improve and regulate the temperature and humidity—a thing much easier said than done.

If fatigue is a factor in accidents, and the abnormal temperature and moisture conditions around the veneer plant contribute materially to the list of accidents, it naturally follows that all this is a bigger factor yet in the matter of efficiency. No workman is efficient when he is made uncomfortable by his surroundings.

Peculiarities of the veneer plant in this respect are more noticeable in winter than in summer. We have then the extreme of the outside weather as a condition surrounding the getting in of blocks and putting them in vats and taking them out. Then in the cutting room is the moisture incident to cutting the hot boiled blocks, which sometimes make a fog so thick that it is difficult to see through it. It does damage to machinery and makes for discomfort all around. Then further along the veneer goes into the drying room with a high temperature and a variable humidity, and finally into the glue room where, if standard glue is used, there is a high temperature with odor and moisture incident to gluing.

Each department of the veneer plant has its own problems in temperature and humidity. The veneer cutting room is a difficult one to keep warm, and one in which it is almost impossible to preserve normal conditions of moisture. About the best practical combination so far set up is that of a single story cutting room with the roof high up and provided with a Texas, or with saw-tooth windows that can be ventilated, and with a dry hot air blast to furnish warmth.

In the drying room the problem is complicated by the fact that most all plans and calculations center on getting efficiency out of the drying process itself rather than out of the men who handle the material. Generally, there is plenty of warmth around the drier and the problem is one of ventilation and temperature. Moreover, since there is no standard or generally used type of enclosure

or room for driers, each plant has its own peculiarities, and no general suggestion for improvement would be applicable. One idea to be put forth and worked toward is that of getting as near normal conditions of both temperature and humidity as possible.

The same story, with further complications, is met with in the glue room, with this difference: the glue room is a place calling for thoughtful and efficient work and for that reason it is more important to secure whatever comfort is practicable than in the drying room, where the actual work is merely that of handling the material. Men in the glue room should work in comfort and be relieved from conditions making for unusual fatigue if they are to do good work. It is practically impossible to get ideal conditions in the old glue room, which used standard glue stock, because there must be no drafts and the temperature must be kept reasonably high. In many cases, however, the temperature can be reduced to, say, from 70 to 80 degrees. The contention of some that a temperature of 100 to 110 degrees contributes to better work in the glueroom is losing ground. Later experiments have demonstrated that good results can be accomplished at a temperature as low as 70 degrees in winter and there is not much call to go above 90 degrees. So the temperature may be kept within bounds, leaving only the problem of ventilation and eliminating offensive odors.

We are discovering that it is practical to ventilate the glue room without producing a draft. Almost any responsible maker of fans and ventilating apparatus can furnish the veneer man with plans and propositions to ventilate a glue room to supply wholesome air without producing objectionable drafts.

Another thing that is contributing to more comfort in the glue room is the use of vegetable glues, which do not require exacting temperature conditions, nor do they bring with them the offensive odor of the old glues. The veneer manufacturer who tries to be up-to-date can solve most of the problems of the glue room and of other work rooms about the place in the matter of temperature and moisture to obtain comfort and reduce the fatigue of bad surroundings. It is simply a matter of going about it in an earnest analytical way to find the remedy and apply it to these departments.

Veneer and Panel Meeting

The National Veneer and Panel Manufacturers' Association will hold its annual convention at the Auditorium hotel, Chicago, Ill., on Tuesday, December 11. Secretary Howard S. Young has already arranged several interesting features for the program, among which are a talk on "Changing Ideas of Efficiency," by E. B. Saunders, a talk on grinding by Mr. Brunner, of the Chicago Wheel and Manufacturing Company, and a talk on "Uniform Cost Systems," by W. P. Flint, secretary of the Millwork Cost Information Bureau.

A Dutch lunch will probably be served in the meeting room at noon, in order to save time, and it is expected that there will be a good attendance. Veneer and panel manufacturers who are not members of the association will be made very welcome.

No use to Shop Around

With present high freight rates and slow movement of local shipments, it is decidedly advantageous to concentrate your buying to make up carload lots. We manufacture in Veneers:

American Walnut

Half Round and Sliced

Figured Red Gum

Quartered White Oak

Sawed and Sliced

Mahogany

Rotary Poplar and Gum

Can supply your entire veneer requirements, shipping in carload, saving time and money.

Special attention is directed to choice line of American Walnut Veneers just cut. Would be pleased to submit full size samples. Prices right.

Letters from a Panel User

THE DIFFERENT STAINS AND BEST METHODS OF APPLYING THEM

Monroe, Mich., Oct. 31.—In some panel factories little attention is given to what the finished article may look like. Some panel manufacturers (very few in number, though, I am glad to state) pay little or no attention to the proper matching of veneers. Door combinations do not look very badly when the goods are in the white, but after finished, this carelessness may result in the loss of the sale of furniture, pianos, or wherever the panels have been used.

It is time the panel manufacturer co-operated with building contractors requiring his class of goods, and, it will be to every panel maker's interest to get some information on wood finishing. The largest and most progressive manufacturers of panels are doing this and one will find among them men having a broad knowledge of this science; but smaller manufacturers do not seem to appreciate the importance of this information. It is for the benefit of the man who does not know, that I will from time to time prepare letters and convey only such information as will be necessary for the guidance of the panel maker.

Good finishing begins in the panel factories and cabinet rooms. Lumber checks must be filled with glue or the so-called furniture cement (which is nothing more than colored shellac). If panels have been properly made, are of good material, and if the other woodwork has been well selected, as to color, etc., little trouble in finishing will usually be experienced. However, when the veneer man matches a piece of red and a piece of white oak, the reader can very readily imagine the troubles of the finisher to get uniform color throughout the entire piece, be it furniture, pianos, doors, or anything else.

Sunken glue joints constitute an unwelcome trouble which looms up frequently in finished work. We are forever preaching the importance of the glue drying before machining the stock. The only reason for sunken joints is because the stock was machined before the joints had a chance to dry.

We know that stains are employed for the purpose of changing color. For this purpose we employ either water, oil, or spirit stains. A water stain is usually employed when finishing mahogany, birch, walnut, etc., and oil stains are applied on oaks, especially golden oak. Spirit stains are not very popular for the reason that they will not hold their color so well as oil and water. The essential consideration in a stain is that it must be absolutely soluble, and by soluble we mean that the color-giving product is completely visible in a liquid that gives up its physical form to become a part and portion of the liquid in which it is to be dissolved.

Stain should always be a clear solution, and if this is not the case, it may be due to impurity of the material or because it was not properly dissolved. Water stains are usually made by putting into solution color-giving products with the design of having this color permanent and uniform.

The following essential properties are inherent in a good stain: First, the material must be in a state of solution, that is, free from suspended or partially suspended matter. Secondly, the stain should contain little or no colloidal or jelly-like substance, more particularly of the character of glue, size, gum, starch, etc. Thirdly, the stain may or may not undergo any change after application, but if a change be intended, it should take place at the time or immediately after being applied, but such change must be final.

It is true that the prices of stain materials are going higher, and as a result the cost of production is being affected. We are compelled to "pay the fiddler." Many are partly offsetting this enormous advance by improved methods, thereby saving considerable labor. The two best labor saving methods known are spraying the stock or dipping. Nearly every woodworking plant today has spraying machines.

The dipping method is very economical as far as labor is concerned, but there is difficulty in keeping the stain of uniform

 T

HE WOODS you use in your pianos have a great deal to do with the sales you make. Other things being equal, the finish and veneer are the determining factors. Therefore, for your high priced instruments, you can afford nothing but the very best wood obtainable.

The best in walnut veneers, as in any other manufactured products, is the result of the most experienced selection of raw materials and the most intelligent care in processing.

Thirty-six years of constant contact with regions where the finest walnut grows is our guarantee to you of the best piano butt wood obtainable anywhere.

Thirty-six years of careful study of exclusive walnut manufacturing problems is your *insurance* that you will get from our fine old butt wood the last square inch of highly figured quality.

HARTZELL'S walnut is "Honor" walnut but it is attractive from the standpoint of price also.

strength. Another peculiarity of these stains is that on hardwood the color will exhaust proportionately quicker than on soft wood. Unless care is exercised in applying the dipping method, and the stain is wiped when on the running board, unsightly runs will be in evidence.

Of course, many manufacturers do not like to use water stains, for they will raise the grain and cause the wood to swell; nevertheless, we can not get away from the fact that the water stain is by far the most transparent and gives best results. Spirit stains will raise the grain but will not affect the glue or veneers. For this reason they are used to a limited extent, but they are open to the objection that most of them lack permanence and may fade.

Oil stains, soluble in turpentine, naphtha, benzole, and other oil solvents, do not raise the grain and will not soften the glue nor cause the wood to swell. An objection, however, is that some of the oil stain may fade.

There are many wrangles between the finishing room and veneering department. Some panel manufacturers have argued that if the veneer could be stained before being applied, this would eliminate blisters and other troubles, but I want to say frankly that this impression is wrong. How can one keep the veneer perfectly clean in veneering? There is more or less glue that oozes out of the pores of thin veneers, and if stained before veneering this blotches the work terribly, or, if these blotches and glue spots are removed in sanding, you may have uneven color. There is nothing to be gained by this method and I would suggest to the manufacturer having this in mind to forget it. If a good quality of glue has been used, the stock thoroughly dried before veneering and the men doing this work understand their business and lay the veneer properly, no trouble will be experienced and the work will stand up.

Absolute uniform results cannot be produced except under uniform conditions. The finisher must make his stains uniform. He cannot change his stains to suit every Tom, Dick and Harry, and even if he could, it would be unsatisfactory to do so.

A. T. DEINZER.

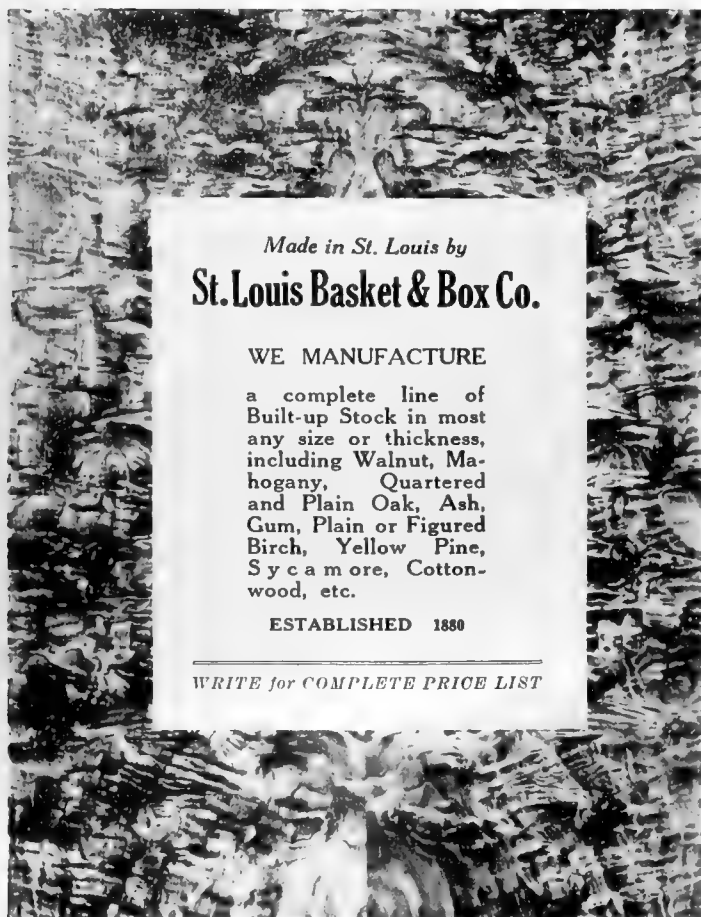

Five-Ply Millwork

Practices followed by the best planing mills and door factories of the country indicate that much of the veneered millwork of the future is to be in five-ply. Work of that kind is very conspicuous in paneling for show windows, and the results obtained are so satisfactory that one may almost read the signs as pointing surely to five-ply paneling as a standard for nearly all interior work. The five-ply panel is the best in door work where large panels are used.

The planing mill industry has come to this conclusion somewhat reluctantly. For the smaller panels, the typical five and six cross panel door, three-ply, does very well, and even two-ply can be made to serve, but when making up single panel and two-panel doors, experiences have taught that five-ply is the only safe proposition.

Many planing mill men have in the past made up three-ply panels of this type, facing them with thin veneer, only to find they had poor work on their hands. There has been so much of this that the experienced members of the planing mill trade have come to realize that the five-ply is the only thing for a big panel. The panel is a good one even when all the veneer used is comparatively thick; and when using thin face veneer, five-ply is imperative, for there must be a cross banding under the face veneer.

The three-ply panel is something of the standard in the furniture industry, but there is a noticeable tendency to a five-ply where the heavier and finer work is involved. In the planing mill and door business, however, the three-ply idea does not hold a very conspicuous place. It will serve for the smaller panels which are firmly held in the frame. However, it has here the question of competition with two-ply, for often two-ply will serve as well as three in the smaller panels made from native wood in thick veneer.

Freight Rates on Veneer

Examiner Esch Discusses Thickness, Weight, and Value

IN a plan for the reclassification of lumber for rate purposes, Examiner Fred Esch has supplied the Interstate Commerce Commission with data of much value bearing on the question whether transportation charges on veneer should consider thickness and value, or only weight and cubical contents. He introduces his discussion by asking if a line of demarcation should be drawn between different thicknesses of veneer, and a summary of his argument follows:

It is strongly contended on behalf of manufacturers of veneer that there is no justification for charging higher rates for the transportation of veneer under one-eighth inch or one-sixteenth inch in thickness, as the case may be, than for veneer of greater thickness.

The only distinguishing characteristic which the carriers advance in justification of different rates on veneer of different thickness is value. They contend that the thinner veneers are more valuable than the thicker veneers, and by the shippers the reverse is claimed to be the fact. Considerable confusion in the record as to the value of different thicknesses of veneer arises from the fact that both the shippers and the carriers have argued from the standpoint of the value per 1,000 feet surface measure, which is generally accepted as the unit

of sale. Obviously, however, since freight rates are based upon the weight of the articles transported, the proper comparison to make in determining the effect which value should have on freight rates is in terms of value per ton.

The following statement of the low and high value per ton of different thicknesses of veneer manufactured from several species of wood is contained in the answer of the Southeastern Veneer Association and the Southern Furniture Manufacturers' Association to the Commission's interrogatories of August 2, 1915:

VALUE PER 1,000 FEET AND PER TON.

Kind of Lumber—	Value per 1,000 feet		Value per ton	
	Low	High	Low	High
1/4-inch poplar	\$6.49	\$13.00	\$18.50	\$37.10
3/16-inch poplar	5.55	11.00	22.40	41.80
1/8-inch poplar	4.50	8.25	25.32	46.20
1/16-inch poplar	3.76	5.50	38.70	56.72
1/20-inch poplar	3.16	4.00	39.50	50.00
1/24-inch poplar	2.75	3.25	39.10	46.10
1/28-inch poplar	2.65	3.10	44.20	51.66
1/30-inch poplar	2.78	3.00	48.35	52.20
1/4-inch gum	5.50	11.10	13.75	27.75
3/16-inch gum	4.72	9.35	15.73	31.13
1/8-inch gum	3.90	7.00	20.80	37.30
1/16-inch gum	3.25	4.70	29.25	42.15
1/20-inch gum	2.70	3.40	29.30	37.00
1/4-inch oak	8.00	22.00	14.55	40.00
1/8-inch oak	6.00	20.00	20.16	72.00
1/16-inch oak	3.50	11.50	26.50	86.75
1/20-inch oak	2.50	8.00	25.00	80.00

The above outlined materials seldom move in straight carloads, but the different thicknesses are usually shipped in mixed carloads. It is estimated that the average value of actual shipments per ton are as follows:

Lumber—	
Low	\$35.00
High	55.00

Carriers refer to this statement in support of their contentions. It will be observed that the low and high values per ton of the thinner cuts is generally somewhat greater than of the thicker cuts of veneer. The difference, however, is not great enough to justify a difference in rates, especially in view of the fact indicated in the statement and frequently reiterated upon the hearing that the different thicknesses seldom move in straight carloads but are usually shipped in mixed carloads. Furthermore, the statement does not show weighted average values and it may be that the average value per ton of the annual production of thinner cuts is approximately the same, barring veneer made from woods of value, as the average value of the thicker cuts of veneer. Other statistics as to values contained in the record would tend to indicate this to be the case.

It will be observed that the range of value per ton is as great per ton for cuts over as for cuts under one-eighth inch thick. Veneer from different species of wood and of different thicknesses frequently moves in mixed carloads.

LINE SUGGESTED AT ONE-FOURTH INCH

On behalf of carriers it is argued that the only force which a showing of equal value for the thicker and the thinner cuts of veneer can have is to prove that the line should be drawn at one-fourth inch rather than one-eighth or one-sixteenth inch as at present. It is contended that by comparison with the average values of lumber, there

The two phrases above represent what is absolutely essential to successful panel manufacture. Our policy has been to educate all of our workmen as closely as possible along specific lines, and to omit no item of equipment that would help make for more nearly perfect service.

The supreme test of efficiency in veneer laying is admittedly the ability to successfully veneer bent shapes. It was on this work that the reputation and growth of our business was founded—this and a quite uncommon bent for artistic matching.

And remember, when you are ready to order we have a complete selection of veneers for your choice.

F. EGGERS VENEER SEATING COMPANY

TWO RIVERS,

WISCONSIN

can be no question that veneer should take higher rates than lumber. It has, however, already been indicated that this comparison is not sufficient, but that a comparison should also be made with the entire range of values of lumber and other articles which carriers accord the base or lumber rates. Upon this point the brief filed on behalf of the Central Wisconsin Traffic Bureau contains the following:

It is admitted that the average value of thin lumber is greater than the average value of rough lumber, yet it must be borne in mind that the term "lumber" as used by the carriers includes a long list of articles, many of which are as valuable, and some more so, than thin lumber. It is further true that a great deal of thin lumber, or so-called veneer, is one of the least valuable articles in the lumber list, used where it will not show, and thereby enabling the further utilization of the forest.

There are a good many articles in the lumber list that could be taken out, and, when compared with the average of what was left, that would make about the same showing as that of thin lumber.

Evansville Veneer Co.

EVANSVILLE, IND.

EVANSVILLE

INDIANA

The suggestion is made by manufacturers of veneer that it would be proper to charge higher rates for transporting veneer manufactured from figured woods, such as quarter-sawed oak, bird's-eye maple, etc., and from woods of value than are charged for transporting veneer made from ordinary woods. It is claimed that such a classification would segregate the highest valued veneers from the less valuable. This suggestion has been adopted in the proposed lumber list, where veneer made from figured woods and woods of value is accorded lumber rates plus 15 per cent, the same relation that is prescribed between ordinary lumber and lumber manufactured from woods of value.

JUSTICE OF RATES DISCUSSED

It is generally accepted by shippers that built-up wood should be rated somewhat higher than lumber and veneer. The relationship prescribed of lumber rates plus 10 per cent is in harmony with the facts disclosed as to comparative values and car loading. This percentage is also fair when compared with the prescribed relationship of lumber made from woods of value to ordinary lumber of lumber rates plus 15 per cent, which is the relationship suggested by carriers upon the hearing, and when compared with the relationship almost universally followed in tariffs at present in effect of lumber rates plus 3 cents. A large part of the production of built-up wood does not come into competition with lumber made from woods of value, but the better grades of built-up wood do, and to accord them a higher basis than lumber made of woods of value would obviously be unfair. When woods of value enter into the construction of built-up wood a rate relationship identical with that provided for lumber made from such wood is proper and is herein prescribed.

It must be admitted that to accord veneer lumber rates and built-up wood lumber rates plus 10 and plus 15 per cent will occasion reductions in a large number of rates, and while that is a matter which should by no means hinder a correct reflection of classification elements in the rate relationships established, it should nevertheless be considered. A material loss in revenues on veneer without compensating increases on other articles might justify a change in the base rates. Of course as to veneer such reductions will be confined to veneer under one-eighth or one-sixteenth inch in thickness, as the case may be. To just what extent such reductions will affect revenues it is hard to estimate. Undoubtedly many of the rates in which large reductions will occur do not at present move any of the traffic. Generally where there is a considerable movement the rates have been brought down somewhere near the level of the lumber rates, although in many cases they are still appreciably higher.

Mr. Esch quotes numerous rates on veneer from different parts of the country, showing that rates are not proportionately the same in different regions, but those from the southwestern region are lower than from the southeast, and adds: "The practice of carriers in the southwest should be considered as having some bearing upon what are reasonable rates upon these commodities and upon the reasonableness of the proposed rate relationship to lumber rates."

Nearly eight times as much veneer is made by the rotary process as by slicing and sawing. More than half of the sawed and sliced veneer is white oak, and the second largest production is from mahogany. Not quite half of the mahogany veneer is made by sawing and slicing, and about two-thirds of the white oak.

Third Battalion, Headquarters—Major R. F. Wade, Capt. E. H. Sargent, adjutant; Capt. O. H. Todd, acting adjutant; Capt. W. H. Estabrook, supply officer; First Lieut. A. H. Elison, engineer officer.
 Company A—Capt. C. E. Clark; First Lieutenants W. G. Conkin, C. C. Kelly, C. M. Jenkins; Second Lieut. E. B. Birmingham.
 Company B—Capt. E. P. Dudley, First Lieutenants G. C. Eastman, L. W. Jacobs, M. Van Meter; Second Lieut. C. B. Bradley.
 Company C—Capt. S. C. Phipps, First Lieutenants C. C. Abbott, H. H. Miller, F. B. Judge; Second Lieut. C. J. Davis, Second Lieut. A. L. Hyde.

Horace Taylor of Taylor & Crate, Buffalo, N. Y., has been selected to act as one of the advisors of R. H. Downman, who under the scheme of reorganization of the Council of National Defense becomes lumber purchasing commissioner for the United States and the allied governments connected with the war industries board. Mr. Taylor is expected to see that the hardwood lumbermen get a square deal, while protecting the interests of the nations allied against Germany.

Mr. Taylor has been in Washington the past few days conferring with members of the old lumber committee and looking over the situation. He has now gone home to arrange his affairs so as to permit of service for an indefinite length of time in the war game. As member of one of the old hardwood firms of the country, which is both a manufacturer of lumber and a dealer, it is hoped that Mr. Taylor will be satisfactory to the hardwood interests generally.

With the passing of the lumber committee naturally W. E. Delaney of Lexington, Ky., and W. M. Ritter of Columbus, O., two hardwood members of the old committee, cease their connection with it, as do W. R. Brown of New Hampshire, George Long and J. T. Gregory of Tacoma, Wash.

The fir interests of the west coast, it is understood, would like representation in Mr. Downman's advisory board. It is possible that it may be enlarged.

Officers connected with the aircraft board state that while spruce and fir are the only airplane lumber now being bought directly by the government, there will be no hesitation about the War Department buying direct and commandeering, if necessary, ash and other hardwood airplane stock, especially if prices get too high, in the judgment of the government. Army airplane and motor truck contractors are buying the hardwood lumber they need.

The navy, however, has bought some ash for airplane manufacture at the naval airplane factory, Philadelphia navy yard.

George E. Lippincott, member of the Philadelphia lumber firm bearing his name, is working under the signal corps of the army in connection with the purchase of aircraft lumber.

Another lumberman who has gotten into the war game is H. L. Tucker of the Tucker Woodworking Company, Sidney, O., who is in Washington talking with War Department officers and lumbermen busy on government work, preparatory to sailing for France. Bearing a commission from the president, Mr. Tucker, it is reported, will be placed in charge of a big government military establishment including lumber yards, wood-working plant, dry kilns, etc., which will be engaged in producing, manufacturing and preparing material for maintaining and repairing military equipment like wagons, ambulances, motor cars, artillery wheels, airplanes, etc.

Lumber experts connected with the shipping board have been busy the last few days revising the specifications for yellow pine ships so as to specify in the schedule the exact number of pieces of lumber required of each size together with a detail description of dimensions, etc. This will make matters easier for shipbuilders and mills, it is said, as the specifications in Schedule 18 grouped certain timbers under items which permitted a considerable range of sizes.

The new embargo order of the shipping board is being sent to mills cutting over 5,000 feet of lumber per day. Many small mills, it is said, can cut ship timbers a piece or two at a time, but the aggregate production of this class of stuff by these mills would be very great.

In the conscription of industries the automobile industry will be among the first to be commandeered in part for the manufacture of airplanes. It is understood. The demand from these establishments for lumber for auto wheels and bodies will in part be changed into a demand for airplane stock, it is believed.

Wooden theatres, called "Liberty Theatres" being built by the government at the several army cantonments will be placed on a big vaudeville circuit, so that the boys in training can be amused.

The Forest Service would like to expand its laboratory work on account of the demand for scientific information for war purposes, but it is understood that the estimates for appropriations for the coming session of Congress do not call for the increased funds necessary. Certain branches of the bureau's work is on the decline as to quantity, but not the war work.

United States Forester Graves has been commissioned lieutenant colonel and it is reported will take active charge of the work of the first American forestry regiment in France under the regular army colonel.

by the Navy Department bureau of supplies and accounts for the manufacture of navy yard mess tables, ladders for ships' sides, boat hook handles and other purposes.

"Cabinier makers and boat makers are needed for wood work about the fuselage of airplanes," says a statement by the aviation branch of the army signal corps. These mechanics and many other classes of workmen will be sent to France to maintain the American army flying service.

"Dusty" Rhoads (more properly C. D.) of Hallowell & Sonder, Philadelphia, who is in Washington talking about lumber markets and government policies, says that eastern lumber wholesalers have difficulty getting stock, owing to the shortage of freight cars, railroad embargoes, the government's tight of way in transportation matters, the commandeering of lumber for government purposes, the priority of war orders and contracts, etc.

Reorganize Southern Hardwood Emergency Bureau

HARDWOOD RECORD has received the following special wire from Washington covering last minute happenings having a bearing on lumber:

After conferences of the Southern Hardwood Emergency Bureau Committee here during the past day or two the following statement was issued this afternoon:

The committee of management of the Southern Hardwood Emergency Bureau has been enlarged from six to twelve members. The following appointments have been made:

W. A. Ransom Memphis, of the Gayoso Lumber Co., which operates in Mississippi.

W. E. Delaney, Lexington, Ky., of the Kentucky Lumber Co., operating in Kentucky, Alabama and Mississippi.

The other appointments will be announced later.

Mr. Delaney who was one of the field members, representing hardwood, on the now dissolved lumber committee, will take an active part in the work of the reorganized bureau. He will spend most of his time here in directing the work. The fact that the lumber committee no longer exists enables him to devote his attention to the work of the bureau and he will become administrating influence in its Washington office.

After thoroughly canvassing the available men, the committee has decided to request the Gum Lumber Manufacturers' Association to relieve J. M. Pritchard, its secretary, from his present duties and lend him to serve the country in this emergency. It is proposed to make him manager of the bureau.

This position requires a thorough knowledge of the intricacies of the hardwood industry with reference to the adaptation of hardwood materials for the special uses of the government. It is thought by the committee that there is no one better qualified for this important work than Mr. Pritchard.

Gum possibilities for box materials and other government needs brought Mr. Pritchard to Washington a few days ago. Tom Fry of St. Louis has also been here on this matter.

E. E. Meyers is going West to do special work for the Hardwood Manufacturers' Association.

Lumbermen say the government specifications for portable buildings for American troops in France will have to be modified because they now contemplate the use of various kinds of hardwood and soft wood lumber in one building although the building panels are to be made at the sawmills.

In the 15 per cent rate increase hearings before Examiner Esch of the Interstate Commerce Commission H. D. McEwen, of Milwaukee, opposed by his testimony the proposed rate increases on woodenware, because he said, they would give eastern managers an advantage.

New Terms of Sale Popular

The directors of the National Lumber Manufacturers' Association at their Chicago meeting on October 10 recommended the following terms of sale:

Cash less 1 per cent on net as per invoice, after deducting freight and inspection fees, or sixty days' acceptance, both from date of invoice, to be mailed within fifteen days of the date thereof. If car has not arrived 90 per cent of invoice must be settled for, less estimated freight as above and balance settled net upon arrival of car.

This recommendation carries with it the stipulation that when nine of the eleven affiliated associations making up the national body, have officially adopted it, it shall become the terms of sale under which lumber is sold all over the country. Since that date the West Coast Lumbermen's Association, the Northern Hemlock & Hardwood Manufacturers' Association and (tentatively) the Southern Pine Association have endorsed the resolution. Thus it seems that the long agitated question of proper terms of sale has been solved, or at least is fairly on the road to solution.

Michigan Manufacturers Meet

The semi-annual meeting of the Michigan Hardwood Manufacturers' Association, held at Hotel Statler, Detroit, Mich., on October 25, was unusually well attended, and its sessions marked with unusually well sustained interest.

President W. C. Hull occupying the chair opened the meeting with a brief talk.

Secretary Knox then presented his report. He said that present conditions demanded a closer co-operation between business men and the government than ever before was necessary and that lumbermen will be found in the foremost ranks in all lines of government work.

Referring to stock report for October 1, he said this compares favorably with figures of a year ago, with five less members reporting. These five members have cut out since the last report.

The treasurer's report was read by the secretary and showed a cash balance of good proportions in the forest fire fund, although the unusual expense of the past year cut down the balance in the general treasury to a minimum amount.

Mr. Knox suggested full discussion on the question of minimum assessments, as due to hasty action at the last meeting there was some confusion on this score. He also requested that a committee be appointed to attend the war conference of the Michigan business men to be held in Detroit in November. He referred to the proposal for 15% advance in freight rates and told of steps taken by lumbermen to watch the proceedings in this instance.

Chief Fire Warden Morford in his report gave the following tabulation of causes of fires during the past season:

Causes	Number	Per Cent
Railroads	26	18.7
Settlers	34	24.45
Fishermen	4	2.88
Smokers	6	4.32
Carelessness	7	5.04
Berry pickers	4	2.88
Unknown	58	41.73

139

In his report on the work of the Michigan Hardwood Manufacturers' Emergency Bureau, Chairman C. A. Bigelow covered the entire activity of that body. According to the report, members of the Michigan association shipped 1,066 cars containing 23,101,815 feet. This was on direct orders, and in addition on orders placed through the Northern Hemlock Manufacturers' Emergency Bureau, there were shipped 182 cars containing 4,200,000 feet. These shipments were made in sixty days, the total expense being \$1,747.76. The agreement with the dealers handling the lumber was that an assessment be levied of net amount of invoice against members shipping on the order, and an additional 7½% per M feet was made to cover the extra expense of distribution. Chairman Abbott of the committee on market conditions presented the following illuminating report:

The market conditions committee held its meeting at the Statler Hotel, Detroit, today. After careful consideration we find the general condition of our hardwood stocks as shown by October 1 statistics is ideal.

The total stock on hand of 21,738,000 feet is 62,043,000 feet or 22 percent less than October 1, 1916. The unsold stock of 85,385,000 feet is 24,144,000 feet or 22 percent less than October 1, 1916. No. 2 common and better hardwoods show 155,224,000 feet on hand or 21,172,000 feet less than October 1, 1916. We have 14,658,000 feet in No. 2 common and better unsold stock on hand than we had October 1, 1916. Over 10,000,000 feet of this is found in the 4 4 and 5 4 maple and No. 1 and 2 common and No. 2 common and better mixed, or in other words the flooring stock grades.

There is no question but that the consumption of flooring has been materially lessened due largely to a falling off in building centers. In fact, construction of large buildings using the better grade of hardwood flooring has been almost nil. This is no doubt due to the war coupled with the excessive cost of labor and other materials entering into building construction of this kind. We need have no fear, however, as there is no more of this lumber than will be manufactured for flooring purposes and for various lines into which it is now drifting.

We have less No. 2 common and better hardwoods in all items excepting ash, which shows a small increase from last year. No. 3 common hardwoods on hand amount to 62,165 feet or 40,871 feet than one year ago and unsold stock of No. 3 common amounts to 27,434 feet which is 38,802 feet less than a year ago. During the past twelve months we have produced 49,000,000 feet less hardwoods than we have shipped. As previously stated, our hardwood stock condition is ideal.

The hemlock situation is taking care of itself very nicely, the stock on hand being 104,341,000 feet which is 10,888,000 less than we had on hand October 1, 1916. During the past few weeks trade has been rather quiet, and yellow pine has been offered at slightly lower prices which has had a tendency to hold up hemlock orders. The car supply in the South is commencing to be felt quite seriously and also there is a tendency on the part of manufacturers to strengthen yellow pine markets. Generally speaking, yellow pine is not a competitor of hemlock today. Our customers will quote us yellow pine rates, but when it comes to getting the goods they want hemlock if we are in position to make the delivery.

The lath stock of 8,467,000 feet is 68 percent of what it was one year ago.

In reporting for the grading rules committee, Chairman Saunders verbally called attention to the new grade of selects hardwoods and asked members to make actual tests of this grade and report to the market conditions committee. This would enable the committee to make specific recommendations at the coming meeting about thirty days hence.

On motion of C. A. Bigelow an assessment of 3c per thousand feet, payable in semi-annual installments, was levied. This will raise about \$12,000 to take care of the association work for 1917 and 1918. At the same time the minimum due for membership was placed at \$50.

Mr. Bigelow, in talking on government lumber needs said that lumber so far used in cantonments is small as compared to what will ultimately be used for this purpose. He stated also that the government has accepted birch as a substitute for walnut in gunstocks and that experiments are now being conducted to determine whether or not maple is suited to the same purpose.

As a means of conserving steel and steel products, the National Lumber Manufacturers' Association is endeavoring to determine the actual needs in the lumber trade of wire cable for logging and other purposes. The members were requested to advise the secretary as to their needs so that he in turn be able to report to the National association.

On motion, the secretary was instructed to advise the War Department that members of the association will accept Liberty Bonds in payment for all government orders and that the members are also willing to accept such bonds from individual customers, either in the 3½ or 4% issue, these bonds to be accepted at par and accrued interest.

Following the granting of \$100 to cover the expense incident to combatting the proposed 15% rate advance, it was moved that the question of meatless and wheatless days in logging camps be referred to the members for individual action with the recommendation that they adopt such measures.

On motion, \$500 was appropriated from the fund of the Forest Fire Protection Association to be invested in Liberty Bonds.

The meeting then adjourned.

The Value of a Smile

A young lumberman who recently passed into the Great Beyond, after a brilliant and successful career, was famous all over the country for his smile. Few of his friends, looking back on their associations with him, will be able to recall his face without the sincere and jovial smile which it usually carried.

He smiled his way into their hearts; he smiled his way through business and personal difficulties, and he won the support and loyal co-operation of his men by smiling.

The driver, who cracks the whip and makes his hirelings jump, may get results; but the smile is equally efficacious.

What They Are Doing Down South

The Southland is in bloom. Sunny Tennessee is in its prettiest color. Some of the cotton has been standing in the fields a long time, notwithstanding the fact that long special cotton is selling as high as 50c a pound. When the cotton planter can get \$165 for a bale of cotton and the negro can make from \$3 to \$6 a day picking cotton, you can understand why the saw mills are all running from sixty to eighty per cent of capacity.

The Southland was never so prosperous, and while the cotton crop will probably produce not over twelve million bales, you can readily understand what thirty-cent cotton means when you recollect how jubilant the Southland was when the price came up to 15c after dragging around eight to twelve cents for years.

The cotton grows on the alluvial lands of the Mississippi Valley, and so do the trees which make the thick lumber which is in demand at this time. And believe me, the Southern Alluvial Land Association and Stonebraker are great factors in land valuations. Fifty-five dollars and more has been paid for cut over lands, and even, when in order to put the land in condition for a good crop it takes \$25 to \$30 an acre to clear and fence the land and put up proper buildings, you have \$200 land—what's the difference?

VALUES WILL BE STRONGER

Lumber valuations are still strong, and a survey of this section will convince anyone that they will be stronger. Thick lumber of all kinds is in unusual demand. The fact is that ash and thick gum make their own price; hickory and elm are showing the stress which indicates further advances in that stock. Several of the reasons for present valuations are summed up in the Government demand for munitions and incidentals to effectively fight the Germans.

England slipped in the other day and bought four million feet of two- to four-inch cypress, any variety, seasoned stock, at a good round price, but after it was all cleaned up, Uncle Sam came along and had to buy green stock at \$20 to \$30 a thousand more than England was able to buy for because she got in first.

The log conditions are bully. The sunshine part of it is the condition of the order book. There is a feeling among the trade that the abnormal war conditions are going to help lumber rather than hurt it. But labor conditions are bad. Of course during the cotton picking season the labor situation is naturally worse, but every institution has been more or less affected by the enlistment of men, and the draft will take thousands more of them.

The car supply is only about 30-60 per cent, and from the indications at Washington we will be lucky if it is not 10-20 per cent of our needs. Illustrating what I mean: Before the government got busy at all an operator with a hundred thousand capacity has only been able to get equipment enough in the last year to run fifty per cent. Of course he is on a small road, but it taps with one of the biggest railroads in the South.

The buying trade is appreciating already that when the government gets its grip on the car situation the men in the consuming market of the North who cannot get the aid of the government car service bureau, because they are not making products utilized for war purposes, will be in the middle of a bad fix if they have not assembled in their yard the necessary stock to take care of the operations of their plant.

GOVERNMENT REGULATION WORKS HARDSHIP

There is no heavy stock anywhere, and if the emergency board at Washington will insist on giving orders to the mills getting out ship timbers, that they cannot ship the siding, it means that Uncle Sam is not going to permit the movement of anything that is not to be utilized in the construction of the boats that have been contracted for. And if somebody cannot pry those boards loose from the obsolete rulings based on precedent and emergency of the occasion, believe me there will not be any saw mills running at all except by the government.

There is no one down here that I have seen that is not patriotic, and but wants to co-operate with the government to the last ditch, and it seems a pity that the government finds it necessary to add a hardship to the mills getting out the special material. Of course Uncle Sam is

not getting the stock now he can now get it, but we all want to help because of the three to five billion feet that will be taken out of the market during the next year.

Speaking of Uncle Sam's requirements and co-operation of the lumbermen, I would like personally to make a little diagram to show to the President, showing how the Lord's own providential actions have made it possible for the present lumber associations to so closely assist the government in the preparations for war. The Southern Pine Association through its emergency bureau, and the individual lumberman have been particularly effective, and perhaps more so than the hardwood operators. Of course there has been the difference of opinion among the hardwood operators which has prevented in the past the greatest association efficiency in the hardwood trade, and it seems it will never be squashed. The selfishness of some of our hardwood fellows has been a responsible factor for many of our troubles.

The Canadian Air plane Company, owned by our northern neighbors of the Johnny Bull family, through Messrs. McDonough and Lennox, has been buying all the thick ash they can find in the Mississippi valley. They are willing to pay a good price; in fact, neither grade nor price cuts much figure providing they can get straight grained stock that has the texture and strength to hold together the war birds of the air, and that will withstand the jolts of land and sky. When you know that their inspection only permits them to take from five to eight per cent of the common and better ash you can readily see that 100,000 feet of tough stringy boards necessitates the handling of two million feet of lumber, and requires going through enough lumber piles to make a city.

The motor track pepole have been scouting around also buying ash; even the great Packard family has been looking for four-inch thick stock, and there has been considerable demand for white oak paddles of thick material, as well as paddle stock of walnut and mahogany.

I am reliably informed that the government recently commissioned a man to go to the coast to get out one hundred million feet of logs in spruce for air-plane material, which suggests that even a greater amount of ash and air-plane stock will be necessary in hardwoods.

The interior finish people are not buying hardwoods as might be expected, and the recent embargo on cars for delivery of furniture, pleasure automobiles, etc., is not helping the trade any. And yet practically every aggressive concern that makes hardwoods in the Mississippi valley is busy. They have no particular surplus stock with the possible exception of box material in gum, which has been a little quiet recently, probably due to the fact that the box factories bought earlier than they generally do because October and November are generally the biggest months in the box consumption, and the factories everywhere are mighty busy.

CAN'T GET LABOR

Logging conditions are very good, with the exception that a full crew in the woods is a thing not to be thought of. "They ain't no sich animul," and while there is a lot of logs on the right of way of the lines that feed Memphis with timber—probably 30,000,000 feet between Vicksburg and Memphis, and every incoming train brings a bunch of logs—Uncle John Dixon's Mississippi Valley Log Loading Company has been working overtime, and the mills have not been able to run full time because of lack of regular supply. Of course a lot of the mills have been running two shifts, making all the lumber they can to get it in the piles, but when you get to mixing up with the boss of the mill you find that the yard that has an abnormal stock in it has orders for two-thirds of that stock. The facts are that prosperity in Memphis and the Mississippi Valley never was so great, the subscription to the last Liberty loan of over \$83 per capita being the greatest in the United States, even overtopping Chicago, which I believe had the next largest average subscription.

The scarcity of men in the sawmill is just as apparent as in the logging camp. I was at Helena the other day and in visiting five mills one day I found the crews were all short from ten to seventy-five men, and with Saturday a half-holiday it is a sure thing to be

duplicated, making a full day off, and this disease affects about fifty per cent of the niggers in this section.

SHOULD KEEP SEPARATE COSTS ON SPECIALS

The special specifications seem to be more unusual at this time due to the demand for air-plane stock, ship timbers, etc., and it has brought to the attention of the management more vigorously the necessity for running a special cost ticket in making particular stock of this character. In the first place, these requirements call for unusual sizes, or particular stock, that is not included in any inspection. Very often it is necessary to select one tree out of five thousand, and often practically requiring special service. It is like sending a doctor from Memphis to St. Paul to cut a man's leg off, hiring a special train to deliver him there ahead of the regular. In other words, the increased cost of getting out this special material is so apparent that no average cost can be considered as a basis for a charge.

That reminds me that there are a lot of people criticising the activities of the lumber men at home and at Washington who are there in a patriotic spirit. But believe me if those criticising critters were to turn the glass on themselves they would probably have more reason to criticise themselves than the patriots. I haven't seen any indication among any of the boys right next to the War Department or in their own home town, that they do not want to do everything possible to win this war, and I am glad to say that most of them begin to realize that it is no Saturday afternoon job. It is a long and serious responsibility, and as our government is made up of the people, the burden must be shared by each one of us. But that need not prevent our getting a profit on any business we ship to Uncle Sam. On the present tax basis, none of us is making any money on business done and turned over to Uncle Sam, and every man I have seen does so gladly, but you cannot work both ends against the middle. You cannot lose money on business you are shipping, and pay taxes on surplus profits at the same time. You must realize, however, that if our government is going to spend fifteen billion dollars a year, the present government tax on railroad mileage, theatre tickets, etc., is only a drop in the bucket compared to what it will be necessary for us to raise in revenues to keep Uncle Sam in cash to meet any contingency.

REGARDING THE EIGHT-HOUR DAY

Then we are confronted with the eight-hour day. Several of the Southern states are going to insist on it practically. It may be that our economic conditions will enable us to work this out properly, but it is none the less difficult, and labor is scarce to meet those conditions. Most business men are paying about forty per cent for lack of efficiency now, and to maintain ten-hour wages for an eight-hour day just adds to the cost figure again. With the nigger labor in the South it isn't the long day that worries them; it is the desire to get the extra pay, and most every one feels the necessity of paying it because of the high cost of living, but to put into force an eight-hour day even under normal conditions severely tests the cost figures and makes it necessary to know actually what everything costs, whether it is a specialty or the regular manipulation of stock.

It has got to be customary these days for institutions to hire an expert to check up their methods of doing business and to find the imperfections in their bookkeeping systems, and I know some operators that are handling their office and cost work at a reduced cost per annum because of the diagnosing of their methods by an expert. Although, when you hire a cost doctor, do not expect him to reorganize your whole bookkeeping system. The probabilities are that he will not be able to do so. You better use the best part of your system and the most modern part of the other fellow's to make it absolutely up to date.

TIMBER INVESTMENTS AND STUMPAGE VALUES

There is still uncertainty in the minds of some operators now days as to whether it pays to invest three or four hundred thousand dollars in stumpage at the present valuation. Of course, the man who bought timber a long time ago bought good timber and had the result to guide him, but it has turned out more than once, and particularly so recently, that purchases made on the highest valuations were about the best investment a man had. The fact is that the present prices and the overrun pays a pretty high stumpage value. Timber that was originally purchased with a large selection to choose from made the invest-

ment originally as well as at the present time, a basis that is not easy to duplicate. Good hardwood timber is always worth while, and unless a man does not know anything about his business and buys some other material than he is supposed to buy, he has not much chance to lose on timber investments. It is true that in purchasing timber the carrying charges now days are different from what they were in the old times when they were a third of the present cost, and it was not necessary to develop timber investments so quickly.

OAK LOOKS GOOD

It looks like oak was coming back to its own. One of the prettiest panels I have ever seen in my life is being utilized in Memphis, both in home and office, quarter sawed and plain oak. The man who is building his home today can use oak to good advantage in his living room and hall, or his dining room, because of the beauty and adaptability of oak. If it was a good thing to do thirty years ago, it is a good thing today, and if you don't believe it I can prove it to you. I recently visited a dining room which was not only finished in oak, but the furniture was in like material, and in speaking to the fellow who lived there and who built the house, he said, "Of all the woods, and I have eight of them in my house, I am of opinion that oak has no superior," and he did not even use quarter-sawed—just the plain sawed stock in good figured logs.

WHAT THE BOYS ARE DOING

Geo. Kerns of Chicago spent a few days at Memphis and Mounds last week. He reports quite a good demand for all kinds of hard wood.

Sam E. Barr of New York blew into Memphis, spent a few days in New Orleans, Louisville and other points last week. He says the trade ought to take advantage of the present weather and what cars they can get, to prepare for the times when the embargoes will practically shut off the supply from the timber sections. He has great confidence in the utilization of hardwoods during the early spring, and believes that the Government will be pretty near operating the railroads at that time, and also that there will be a scarcity of labor, and bad delays occasioned by winter conditions.

A local manager said to me the other day, "What is the use of taking an order when you cannot fill it, and do not intend to fill it as offered?" This only means a bunch of trouble nine times out of ten, and it is not the style now days to take orders with the full knowledge that they will not be filled according to the terms of sale. In other words, the present conditions in the trade do not warrant mixed grades. Notwithstanding that fact, there is more need for the lumbermen getting closer up to the consumer and helping him work out his problems in utilizing lumber at the present prices.

F. E. Gary of the Crenshaw-Gary Lumber Company was at his desk the other morning, and the mail man placed in his hand a number of checks. He remarked that there never was a time in the trade when he found collections so satisfactory as now. For shipments in September the company collected more money than the invoices sent out, indicating that not only the consumer, but the handlers of hardwood were taking advantage of every discount.

Uncle Moses Katz of Wausau, Wis., migrated with the birds to the Southland, when the snow flurries started in Wisconsin several weeks ago. He is now visiting at Memphis where he is counselor and friend to his nephew, Sam Katz, and Joe Thompson, who operate the Riel-Kadel Lumber Company, dealing in ash.

C. B. Dudley of the Dudley Lumber Company, has had his hands full lately. His order book is full, and his yards at both Memphis and New Orleans are pretty busy loading and unloading cars. He seems to be busy not only in the airplane business, but his other ash customers are pushing him right along to get ash into their warehouses. Dudley has great faith in the continued increasing demand as well as the advancing price of their ash. He spent several days this month at New Orleans where he has probably three million feet of ash on sticks.

John Utley of the Utley-Holloway Company of Chicago has been in the South most of the time for the past two or three weeks. Their new mill in Mississippi will be in operation shortly, and they are making every effort to get every shipment forward possible. Mr. Utley reports a good volume of business.

Lawrence Ford of Goodlander Robertson Company of Memphis, and a number of the lumber jacks were down at Vicksburg recently, and report buyers from all sections are spending the bright November days in the lumber yards buying not only new stock, but trying to get as much of their present orders on schedule filled and delivered to their customers North. *

Mr. Ford as well as a number of the lumbermen are very busy in Memphis this week at the opening of the new Chickasaw club. They rented an old-time residence on Madison street, and it looks like it is going to be a very homey place. The lumber crowd will be repre-

sented on the board of directors by Chas. Ransom, chairman of the entertainment committee; Lawrence Ford, chairman of the house committee, and Pop Dickson, "private" on the directors. The membership is composed of a large number of the lumber trade and there is more enthusiasm over starting the ball rolling than often occurs in the club life of Memphis.

In speaking of clubs it reminds me that the old Tennessee is just as hospitable as ever, and W. H. Russe is still president. I do not know whether this is a life job or not, but it looks that way.

E. H. D. CH.

Hickory at Home and Abroad

EXPORT OF HICKORY

Hickory may be regarded as the most important item in our timber resources. There is no real substitute for hickory, and there is no commercial hickory growing naturally anywhere else in the world, while there are many uses for which it is essential. For this reason and because of the growing scarcity of this wood, it has long been contended that we should put a check on the export of hickory in log form, and insist upon shipping it out of the country only in the shape of manufactured goods, and at that the trade should get enough for the product to make a good profit. There is very little if any excuse for sacrificing our hickory for nominal returns.

Following a conversation with an important user of hickory in handle work, who has been a persistent advocate of good prices for this product for fifteen or twenty years, the writer was moved to look up some of the export figures and other data on hickory. We had discussed the question of how much hickory is exported in log form, and whether or not it should be so exported. This manufacturer questioned the quantity going abroad, and said that he had upon investigation found considerable going out of a southern port some years ago. He had installed a plant near there to gather up that hickory and manufacture it, thus putting a check on the exports from that particular point.

After tabulating the figures from our commerce reports, the following letter was written to this manufacturer:

Dear Sir: Following my conversation with you yesterday I looked up the figures on the export trade in hickory logs which I find to be as follows:

Hickory Log Exports.

1912	8,476,000 feet
1913	8,957,000 feet
1914	6,368,000 feet
1915	2,306,000 feet
1916	1,986,000 feet

Total in 5 years.....28,193,000 feet

The total log exports for last year including hickory, oak, walnut and others was 51,714,000 feet, while the total in 1913, which was the biggest year in our export trade, was 159,930,000 feet.

It may be presumed that after the war, unless some effort is made to check it, there will be a resumption of the big export in logs. We may be sending ten million feet of hickory logs abroad in the year following the declaration of peace unless some plea is made to the government to either check or prohibit the export of such timber in log form.

My contention is, and has been, that we should export hickory only in the manufactured form, so that we may get more value out of it, more employment for our industries and the people employed therein.

The fact that the wood grows nowhere else in the world gives to the hickory manufacturers of this country absolute control of the world's trade in hickory products, provided shipping out in log form is restricted.

We have been told by good authorities that it is the hickory handle that helps carry the American ax and other tools to all the markets of the world. Moreover, it is our hickory which helps make the superiority of harvesting machinery which is called for all over the world. People in other countries may prefer to buy the logs and work them to suit themselves, and naturally it would give them more work, and involve the sending of less money out of their own country to get this material. It was common report that the Krupp gun works were

formerly buyers of enormous quantities of hickory, and they wanted to work it up to suit their own notions.

Any man with hickory stumpage or logs feels that he has a perfect right to sell them where they will profit him most. If some export buyer will pay better money and make better terms than the domestic consumers, there is his market, and he would regard it as a hardship to have a check put upon it and be forced to sell in the domestic trade.

It is the duty and should be the mission of hickory manufacturers in this country to make the domestic demand the best market for hickory timber in all forms, so there would be no special inducement to sell logs for export. Perhaps enough effort along this line would result in removing any necessity for legal restrictions on the export of hickory logs.

The supply of hickory coming out of the woods is comparatively small. Lumbermen do not seem to care to get it out, and manufacturers who need it must hire it cut and brought to the factories, at an increase in cost. This increased cost makes the value of hickory products today perhaps twenty per cent higher than they were a year ago, and even at that the margin of profit is comparatively small.

J. CROW TAYLOR.

Power Trucking Possibilities

Hand trucks play an important part in the veneer industry, and there are some power trucks used for handling logs and blocks. A new question is coming into this matter in the factory, a question of power trucks, where they are adaptable and where they are not practical. In many instances where previously hand trucks were used to convey material about the plant, the electric power truck has now entered to relieve the burden of hand labor.

Nearly every man who has been around a veneer cutting plant for any length of time has seen instance after instance of one, two or three men dropping other work to push a loaded truck from a veneer machine to the drier or to some other point in the factory. Electric power would relieve this man-power, and there is need for something of this kind because of the scarcity of help.

On the other hand, there is a question of whether or not enough is to be gained from the power truck to justify the experiment. In some factories the trucking problem can be relieved by more attention to smooth and clean floors. The moving of an ordinary truckload of dry veneer or panels over such a floor should be done easily by one man, and since only one man is necessary even with an electric power truck there is a question whether any saving would be effected.

At the cutting end it is a little different. Wet veneer is heavy, the problem of trucking cores enters, of transporting logs and blocks from one place to another. Some of this work today is done by overhead trolleys, some by cranes, and some by log hauls. It is very likely that in some instances an improvement could be had by using electric power trucks.

The present purpose is not so much to argue specifically for the power truck around the factory as to bring the subject up for thoughtful attention. Whether or not there are possibilities depends much on local conditions. Each man will have to settle the matter for himself. The important fact is that the electric truck is entering the industries quite extensively to take the place of the hand truck.

Early Sawmill and Its Builder

Writers who concern themselves with the history of lumbering like to get back to the beginning. Much has been written of pioneer sawmill men of various regions, but one short chapter seems to have been overlooked. It deals with the central Appalachian region in West Virginia and concerns the making of what was probably the earliest sawmill on the upper tributaries of the Ohio river. It preceded by one year the earliest known mention of a sawmill in the vicinity of Pittsburgh.

The history of that oldest sawmill and its builder was recently investigated by a representative of *HARDWOOD RECORD* while spending

SAWMILL CRANK 141 YEARS OLD

Unearthed and photographed in Tucker County, West Virginia, by a representative of *HARDWOOD RECORD*

a few days at St. George, W. Va.; and certain dates and facts were subsequently verified by records in the Pension Office, Washington, D. C., where a sort of biography or autobiography of the builder is on file as a part of his pension record in the Revolutionary War.

The sawmill builder was David Minear, and the Pension Office record says he was born in Bucks county, Pa., in 1755; and his grave stone in an elder thicket near the site of his old mill gives the same place and date for his birth, and 1834 as the date of his death.

When nineteen years of age he explored the wilderness a hundred miles west of the extreme frontier, which was then in the vicinity of Cumberland, Md., and having chosen a site for a settlement in what is now Tucker county, W. Va., where St. George was afterwards built, he led a colony of thirty or forty settlers to the new land two years later, that is, in 1776. The only road was an Indian war trail across the Alleghany Mountains.

Among the articles carried on packhorses over the trail when the colonists journeyed to the west were the irons for a sawmill, consisting of a crank for the waterwheel, an up-and-down saw, dogs and a few bolts. All other parts of the mill were of wood and were made on the site. Arriving on the ground in April, he first built a fort as a refuge against Indians, and then built the mill to provide the settlers with lumber. The stream which furnished the power is called Mill Run to this day. The dam was of oak logs, and part of it stood exactly one hundred years, the last of it going out during a flood in 1876. So well preserved were the logs that the ax marks were plainly seen after a century. The mill race yet remains visible, crossing gardens and yards and passing beneath houses.

No statistics of the quantity of lumber cut by the mill have been preserved; but it must have been small. Soon after the mill was built David Minear's father, brother, and several other settlers were killed by Indians. It may be supposed that the mill was idle during that strenuous period, which extended through the Revolutionary War. David Minear shouldered his rifle in defense of his colony and his country. The Pension records at Washington tell what he did. He fought through five campaigns against the savages, and ranged the forests almost continuously during twenty-seven months, extending his campaigns to Kentucky, Ohio, and Indiana. He was with General

Clark, the conqueror of Kaskaskia and Vincennes. He was in an Indian fight at the mouth of Licking River, opposite Cincinnati, and nine of his companions were killed there, but he escaped. Again he fought the Indians, this time fifteen miles from Chillicothe, Ohio, where fifteen men were lost. Minear helped cut down the Indian corn, aggregating 300 acres, the purpose being to destroy their food so that the warriors would be obliged to support their families by hunting and would have less time to attack the settlements.

It is said that the old lumberman and Indian fighter died of starvation. A disease that attacked his face made it impossible for him to eat, and he died at the age of seventy-nine.

Though a producer of lumber, David Minear followed his Pennsylvania training and built a stone residence for himself. He was several years in building it. Either the foundation was insecure or the superstructure was too heavy, and the walls cracked before the death of the builder. He provided in his will that the house should be torn down, when it should be no longer safe as a residence, and the stone be used in building "a high, strong, and durable wall round the plot where my bones shall lie in hope of rising again in the resurrection of the dead."

The wall was never built. The stone house stood the storms of sixty years after its builder had passed on, and was then demolished by a contractor and the stones were used in bridge piers. The plot of ground which contains the grave lies unfenced yet, in the rear of a blacksmith shop, and is an almost impenetrable thicket of elders. It was within a few rods of his mill.

There may be none of the lumber that was sawed in the old mill in existence. An old yellow poplar door, now doing service in a vegetable cellar, is thought to have come down from that period.

"ANN ELIZA" MEMORIAL CHURCH

Perhaps the oldest memorial building west of the Appalachian mountains. Photo made for *HARDWOOD RECORD*

When the stone house was torn down twenty-five years ago, the last lumber that certainly came from the old mill disappeared. The floors were oak, and all else was yellow poplar, according to the recollections of persons present when the house was torn down.

The foot which David Minear cut by passing the base of the tree to the Indian ways. The mill was located on the banks of a creek in Tucker county's timber belt, several miles from the river.

The sawmill never sawed a log, but the mill at its base is a heap of ruins at the present day. We found that time such of the irons as were serviceable were carried away and again saw use in a muley sawmill three miles distant. About a quarter of a century ago that mill was abandoned. The representative of the Wood Record sent to the site to find only a few rotten timbers, partly covered by driftwood lodged there in times of flood. After a search of an hour and some excavating, the old crane that drove the saw was found. It was carried out and photographed. It is shown in an accompanying cut. Rust has not greatly damaged it during the 141 years of service and abuse since a packhorse carried it over the mountains. Its weight is about seventy five pounds.

David Minear was not only a lumberman and an Indian fighter, but also a church missionary who worked hard to plant Methodism in the western wilderness. He was ahead of Bishop Asbury in that

region, and his work was only begun. On one corner of the mill site, back of the ruins, is the grave of the woods to Winchester, Va. It is a goodly pile of logs, the work of the mill during its forty years. His stone house was the earliest of its kind in the forest, and it was occasionally a missionary stopping place to traders passing through the wilderness. But David Minear wanted a better meeting house, and he built one, and in memory of his little daughter, he called it "Ann Elizabeth." It may have been the earliest of its kind in the west of the Appalachian Mountains. The villagers have worshipped in it for more than a hundred years, and today it is served by a Methodist circuit rider, and it is still known by the name its builder gave it. The people there say that the bellry and the weather boarding have been added within the past seventy-five years, but otherwise the building is about as its founder left it. Tradition says that Bishop Asbury dedicated the church, but the truth of the tradition is doubtful. Asbury does not mention the church in his diary which records his doings day by day, which is circumstantial evidence that he was never there.

Dimension Stock Drying

A factor of considerable importance in connection with the dimension stock business is that of drying the material. Most of the dimension stock must be thoroughly dry before it is used, and the questions turn upon when and how to dry it.

Much is reduced to its size from green timber and the drying is done afterward. In opposition to this, however, a concern quite prominent in dimension stock business, making a specialty of mahogany, follows the practice of thoroughly drying the lumber and ditches before working them into dimension stock. Ordinarily this would seem like waste of time and dry-kiln space, because it takes longer and requires more room to dry rough lumber than to dry the product after it is refined into dimension.

The arguments put up by these people in support of kiln-drying lumber first was that a wide variety of dimensions was made and that to cut the stock green and then dry it would necessitate drying not only the original dimensions, but other dimensions made from the trimmings from these dimensions and so on. This makes quite a confusing list of articles which would have to be gathered up and dried separately, and it was figured it would simplify the matter considerably to dry the lumber first, then reduce it to dimensions.

It would be hard to apply this idea in getting out oak and hickory dimension stock, especially where the dimensions are larger than could be obtained from ordinary inch boards. In making dimensions from regular lumber stock, say from 4/4 to 6/4 boards, there may be times when it would be best to dry the lumber and then cut it into dimensions. This may apply to maple and gum used in broom handle work, because the trimmings from the dried lumber would be already dry and ready to use for smaller dimensions like chair rungs, rods and small turnings and mouldings. It might apply also in the ash handle trade.

There is room for an interesting investigation along this line not only to determine when it is best to dry the lumber first, and when best to do the drying after the dimension stock is cut, but also to get light upon the best ways and means for handling different sizes and kinds of dimension stock to get it dry or seasoned in the best shape at the lowest cost.

Adding New Languages

One thing this war will do for Americans is to make them feel closer and more neighborly to those of the Continent with whom they are fighting. Our boys will come back from France with a working knowledge of the French vocabulary, just as many of them came back from the Mexican border with some knowledge of Spanish. And this greater familiarity with and interest in other languages is a pretty good entering wedge for enlarged commercial transactions with those using them.

Spanish especially is a mighty good thing to know just now. English is perhaps the most widely spoken language on earth, due to the fact that "the sun never sets on the British Empire"; but Spanish is

a good second. A man equipped with a knowledge of English and Spanish could not only travel comfortably, but do business, in most of the countries of the world.

It may be that before long lumbermen with a vision of the future will be having classes in modern languages for their salesmen, putting them in a position to go out "on the road," and to include in "the road" some of the great markets in other lands across the seas. Indeed, something of this sort has already been attempted. For instance, the C. C. Mengel & Bro. Company of Louisville had a class in Spanish several years ago, for the benefit of those who either had correspondence with the Mexican and Central American points where the mahogany company is represented, or with a view to going there.

Knowledge of other languages than English is a real asset for the modern business man, especially in sales work. That it is of practical, commercial value is indicated by the fact that not a few men who understand other languages make a fair income by translating correspondence which business houses have with customers in foreign countries.

Woods and the War

One of the advantages which the lumber industry will reap from the war is a more general knowledge of the availability of certain woods for certain work.

In these days of high pressure operations, when immense quantities of materials must be produced on short notice, it is not always feasible to wait for the wood which has always been used for the purpose. Something else must be adapted to the use, if it is found on investigation that it will serve. And in many instances the something else is located, and tests demonstrate that it will answer the purpose excellently.

The use of oak for aeroplane propellers is a good example of this. Heretofore other materials have been specified, but because a great quantity was needed oak was studied and found to be suitable. Other situations of this kind are arising, and the net result of the war's experience will be a better knowledge and appreciation of the possibilities of wood in its various forms.

It is of course true that in peace times, when purely commercial considerations prevail, the price element is often a controlling factor. That is to say, a wood is selected primarily because it is the cheapest available material suitable for the purpose. Some other wood may be somewhat better, but too high-priced to justify its use under the conditions. But this is not the big consideration in war-times. It is a case of getting the product into use, and of supplying the need in the shortest possible time. The fact that a suitable wood may be a few dollars higher in price than that which has always been used is not likely to prevent its being specified for the work. But while this is so, the actual trial of new woods in work for which other materials have always served cannot but prove suggestive when this experience is applied to the commercial field.

Clubs and Associations

Hoo-Hoo Out of Debt—Will Incorporate

Secretary E. D. Tennant of Hoo-Hoo has addressed to the members the following optimistic letter:

At a meeting of the Supreme Nine of Hoo-Hoo which was held in St. Louis on Oct. 27, it was found that owing to the generous response of members in all sections of the country to the appeal for funds to take care of the balance of the old indebtedness of the order that we are able to make financial arrangements to pay off the entire outstanding debts of Hoo-Hoo in full and give instructions to arrange for the incorporation of the order at once. This means that Hoo-Hoo will be free from all debt and in position to go ahead and carry on its work with renewed strength and vigor.

The supreme nine were greatly pleased with the returns for dues collections during the current year. These were shown to be over one-third greater than for the same period last year and indicates that, in spite of adverse war conditions, the vitality of Hoo-Hoo is stronger and the order is in a very active and flourishing state.

Arrangements were also made at this meeting to perfect an organization that will take charge of the lumbermen's comfort fund. There is a considerable amount of information still to be gathered before the order can announce its final plans regarding this fund, but Secretary-Treasurer Tennant expects to be able to make further announcements within the next day or two.

Memphians Leave for Washington Conference

R. L. Jurden, H. B. Weiss and W. B. Burke, members of the Southern Hardwood Emergency Bureau, left Memphis for Washington on Wednesday in response to a hasty summons from the committee on raw materials of the Council of National Defense. Ralph May of May Brothers, and W. A. Ransom of the Gayoso Lumber Company, who were among the Memphis firms agreeing to furnish units for the wooden ships being constructed by the emergency fleet corporation, accompanied these gentlemen.

No intimation was given as to the reason for the hurry-up call for the members of the emergency bureau. It is generally believed that their advice is sought regarding certain contracts for southern hardwoods to be awarded in the immediate future.

Again Urges That National Association Facilities Be Used by Government

President John M. Woods of the National Hardwood Lumber Association has addressed Secretary of the Navy Daniels again urging that the services and facilities offered by the National be used in facilitating purchases of lumber by the Navy Department. The letter follows:

The National Hardwood Lumber Association, consisting of over 900 firms, representing every large lumber market and hardwood producing section of the nation, is anxious to assist the national government in every possible way. Six weeks ago, it placed unreservedly at the disposal of the purchasing office of the shipping board, its heartiest cooperation and assistance, including the services of our large corps of trained inspectors, which is an absolute guarantee that all purchases of lumber by the government, or otherwise, will get the quality and quantity purchased.

Fully realizing the great responsibilities of your high office and the tremendous demands upon your thought, time and strength, we felt that possibly in the stress of important matters, the offer made by our association had not been called to your attention. Under separate cover please find constitution, by-laws, list of members and book of rules for the measurement and inspection of hardwood lumber.

To Conserve Car Service

The National Wholesale Lumber Dealers' Association through its special railroad conference committee issues as an appeal in behalf of full loading and quick handling of freight cars the following communication from the Government Car Service Commission:

Your letter of the 12th instant, has been received, with reference to the general transportation conditions at present existing and inquiring as to probable future conditions.

The commission begs to reply that the embargoes referred to are the result of general congestion on the lines mentioned, and while conditions may be somewhat improved during the next few weeks, yet it is likely that when cold weather arrives with its consequent slowing-down effect on the railroads, and with probable increased offerings of freight, the congestion may be of serious consequence.

No one can actually forecast the extent to which the facilities of the transportation lines will be overburdened during the coming winter, but it is generally conceded that the increasing demands of the Government will retard the handling of many classes of commercial freight.

Embargoes and preferential orders will of course be based on the relative importance of commodities, and no doubt some classes of freight will be more or less delayed in movement. We cannot hope to eliminate these troubles, but the extent of minimization depends upon efforts of the carriers plus detailed and individual efforts of freight shippers and receivers.

One of the greatest factors in a condition of this kind is the prompt unloading of cars. It would surprise you to know the vast number of loaded cars held in various railroad yards and terminals waiting acceptance and unloading by consignees. Every car so held adds to the drain on facilities of the carriers. This commission, in conjunction with various sub-committees located throughout the country, is exerting every effort to reduce the accumulation of loads held for consignees, and we take this opportunity to ask the active cooperation of your committee of the National Wholesale Lumber Dealers' Association. If you will help us to control these accumulations, the result will be equivalent to an extension in railroad facilities and the benefit will be mutual.

Your expression of the cooperation extended by your association is very greatly appreciated.

The forms referred to are designed to place before the officials of shipping companies constant record of the performance of their own working forces and of those from whom they receive materials or equip-

ment. The forms are now in general use and are proving their value. They can be secured from the Government Car Service Commission.

Memphis Lumbermen Subscribe \$530,000

Members of the Lumbermen's Club of Memphis subscribed for \$530,000 worth of the bonds of the Second Liberty Loan, according to the report of the special committee appointed at the previous meeting to solicit subscriptions from the lumbermen. It became noised around before the meeting at the Hotel Gayoso, October 29, that the showing would be excellent but the announcement of the actual results of the work of the committee was received with very great enthusiasm. No details were given regarding the amounts subscribed by the various members. James E. Stark, chairman of the committee, contented himself with the simple declaration that the members of the club had "made good" on the resolutions adopted at the previous meeting pledging their enthusiastic and loyal support to the government, to President Wilson and to the soldiers in the army in connection with the subject of helping to provide funds for winning the war.

There was considerable discussion of the question of adopting a uniform plan for dealing with the problem presented by the 3 per cent war tax on freight bills imposed by the government, effective November 1. It was the sense of the meeting, however, that no hard and fast rule could be adopted and that the individual members would have to deal with this subject according to the special conditions surrounding their business. The best suggestion made was that calling for quotations on the basis of "freight allowed," thus throwing the war tax on the consignee. There appears to be no doubt that the lumbermen intend that the receiver shall pay this tax and they are working hard, individually, to work out plans to this end. "Freight allowed" quotations, it was emphasized, would enable those having lumber sold ahead to protect themselves against advances in freight rates after such sales were made.

A letter was read from a well known Baltimore firm suggesting that the club appeal to the secretary of the treasury for the establishment of a federal reserve bond abroad with a view to facilitate the financing of foreign business in lumber as well as other commodities. This communication was, without discussion, referred to the law and insurance committee. The club, it may be stated in passing, however, is keenly interested in every move that will aid in increasing exports of lumber and forest products.

J. E. Dulweber and E. F. Glaser of the Kraetzer-Cured Lumber Company, which recently opened sales offices in Memphis, were elected active members at this meeting.

There were about sixty members present at this meeting and the usual luncheon was served. President Ralph May occupied the chair.

Townshend Encouraged Over Prospects

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, Memphis, accompanied by Edward A. Haid of St. Louis, one of the attorneys of this organization, has returned from Washington where he, Mr. Haid and J. V. Norman, the other attorney, went to hear the testimony introduced by the representatives of the carriers in the 15 per cent rate advance case which came up before the Interstate Commerce Commission Monday morning, November 5.

The representatives of the carriers completed their testimony sooner than expected and the shippers are now introducing their evidence. They will have certain days on which to do so and the lumbermen will present their evidence Tuesday, November 13. Mr. Townshend will then introduce testimony to show that lumber is paying more than other commodities. If it is demonstrated that the carriers need an advance he will urge it for the war period only and on the basis of cents per hundred pounds rather than per cent. Mr. Townshend, Mr. Haid, James E. Stark, president of the association, and other gentlemen held an informal conference at Memphis, November 7, at which it was decided that Mr. Stark should be one of the witnesses before the commission for the association. Other gentlemen will be selected to appear. Mr. Townshend and the two attorneys already mentioned will be there Tuesday.

Mr. Townshend is rather encouraged in the belief that the carriers have failed to introduce evidence showing conclusively that they must have higher revenues. Mr. Haid has completed an analysis of the statements submitted to the commission by representatives of the carriers and he says that these show that these roads are enjoying a ratio of earnings nearly 1 per cent larger than the minimum named by the commission at the previous hearing as the basis for determining whether or not they should be entitled to higher revenues. He also said that the figures presented showed that these roads had enjoyed larger net earnings during 1917 than for any recent years with the single exception of 1916 and 1910.

These facts are regarded as very important by both Mr. Haid and Mr. Townshend for the reason that the association won its previous big victory last summer through its ability to show that the evidence presented by the carriers themselves defeated their contention that they were entitled to higher rates as a basis of greater revenue.

Mr. Townshend says that the association will not oppose an advance in hardwood freight rates if the carriers are able to show that these are absolutely necessary but he declares that it will fight for a much smaller advance than 15 per cent in the event the commission is in favor, when the testimony is all in, of allowing higher rates on the various commodities now on trial.

Appalachian Congress to Be Held This Month

Wednesday, Thursday and Friday, November 21, 22 and 23, have been chosen as the dates for the Appalachian Logging Congress, which will be held at Knoxville, Tenn. John Williams of Knoxville, has been appointed secretary and assures everyone that the liveliest possible program will be presented. Matters directly pertaining to all features of logging in that rough mountain country will be discussed by men who are well able to handle their subjects. They will have interesting and instructive excursions and a first class social program.

Hoo-Hoo Having Big Time at Chicago

As HARDWOOD RECORD goes to press the Hoo Hoo of the Chicago district is holding a big concatenation at the Lumbermen's Association quarters in the Lumber Exchange building. Twenty to twenty-five kittens are being put through the mill. The services were preceded by a substantial dinner.

A. C. Quixley is now vicegerent snark for the northern district of Illinois, and he has lined up some active committees who are helping him out in great fashion in the way of getting new initiates. Hoo Hoo in this part of the country is certainly coming to its own.

Annual Meeting of Louisville Hardwood Club

With an even dozen lumbermen present the Louisville Hardwood Club celebrated its ninth birthday with a big "Turkey Dinner," at the Seelbach hotel, on Tuesday evening, November 6, at which time several important matters came up for discussion, principal of which was a movement to discontinue the weekly meetings, and in the future meet on the first and third Tuesday of each month.

However, to change the meeting night will mean a change in the by-laws, and the motion will have to be held for two weeks, and then voted upon by the association as a whole.

The election of officers brought together the youngest leaders that the club has known, and should instill additional ginger in its operations. These men are: President, A. E. Norman, Jr.; vice president, Tom Christian; treasurer, Preston Joyce; secretary, R. R. May. Mr. Norman moved up from the vice-presidency, filling the vacancy caused by the death of Smith Milton in October; while Mr. Christian is serving his first term as an officer, he being one of the newer members. Mr. Joyce succeeds C. M. Sears of the Edward L. Davis Lumber Co., who held the position of treasurer since the club was originally started, and who begged off in favor of younger men. Mr. May is serving his second term as secretary, having succeeded G. D. Crain, Jr., more than a year ago.

The new president upon resuming the chair brought up the question of the club's taking up a number of more serious subjects, and outlined a plan of work. Mr. Norman stated that due to the increasing costs of labor very few lumbermen actually knew their costs of production, and that he planned to have several members work out their costs, and deliver talks, backed with figures, showing what the actual production costs were, and have all of the members prepare some data along this line, so that everyone would get an insight into the costs of other lumbermen than the ones actually handled by any one individual. Mr. Norman advocated that other matters of the same general nature be brought up and discussed, relative to production and marketing.

It is planned to admit non-resident or associate members.

Traffic conditions and the labor situation were discussed at some length, financial conditions also being brought up in connection with the recent drops on the stock exchanges, and probable reasons therefor. Very few members are getting enough cars at this time, although a few houses are getting more logs than they can handle with the present forces. The car shortage is steadily growing worse, and is expected to set a new record this winter, while the embargo situation is bad for this early season, various embargoes being in effect on southern shipments into the eastern district. In the far South the labor situation is expected to begin showing improvement at once, as the crops are now almost harvested, and this should relieve the situation.

In discussing the lumber market it was shown that the principal demand is for thick stocks, and principally for direct or indirect Government orders, truck, wagon, aeroplane and other manufacturers being good buyers, and at good prices. Oak is in much better demand than for some time, that is in thick stock, thin grades being in light demand, while there is very little flooring business. Ash was reported to be in excellent demand, and also walnut. As Government orders are being given preference over commercial orders by the carriers in furnishing cars, it was shown that Government orders appear to be the very best bet for the next few months' operations.

While a few members displayed a bit of pessimism concerning present business and future conditions, the tone of the club was one of optimism, most of the members believing that this winter would find prices higher and an improvement in the demand from various sources, although there is no getting away from the fact that the labor and traffic situations are the serious factors.

Will Develop Timber Tract

A tract of hardwood timber near Cornellsville, Pa., was recently purchased by F. A. Dowler of Clearfield, Pa., and J. A. Dowler of Buckhannon, W. Va., and the operation will be carried on under the firm name of Dowler Lumber Company. Mr. Dowler will be general manager. The tract contains a large amount of poplar, oak, maple and chestnut.

With the Trade

In Hands of Receivers

Announcement has been made that the C. S. Paine Furniture Company, Grand Rapids, Mich., has been taken over by the Michigan Trust Company, as receiver. The liabilities are estimated at \$114,000, with assets to cover them if time is given for conversion. The company is capitalized at \$195,000 and employs 50 people.

Lumber Plant Burned

The plant of the Hamont & Hall Company, at Wainville, W. Va., was burned in the latter part of October, the fire originating in the boiler room from accidental causes. Exact figures on loss and insurance have not been learned. About fifty hands were thrown out of employment.

Obituary

George E. Dawes, for many years woods superintendent of the Goodman Lumber Company, Goodman, Wis., died at the M. & M. Hospital in Marinette, Wis., after an illness of two months from sarcoma of the liver. He was fifty-five years old.

Louis A. Rousseau, a well-known lumberman of northern Wisconsin, died at his home in Rib Lake, Wis., aged sixty years. His father operated a sawmill near Stevens Point, Wis., for many years. In recent years Mr. Rousseau represented the Rib Lake Lumber Company as a traveling salesman.

J. D. Leavett, who resigned recently as superintendent of the Gurney Lumber Company, Gurney, Wis., to enter business on his own account, accidentally shot and killed himself while hunting with his son and a party of friends near Gurney on October 24.

Sawmill Machinery Company Building Addition

The Hill-Curtis Company, manufacturer of sawmill machinery, Kalamazoo, Mich., is erecting a substantial addition to its already large factory at that point. The addition will be 120 feet long by 80 feet wide and will be added to the main building which is now 200 feet long by the same width. The extension is being made for the purpose of giving more room to the machine and assembling departments. These departments are very much rushed on account of the acquisition of the Curtis line of sawmill machinery and equipment. The Hill-Curtis Company is now turning out this line in addition to the Hill line formerly manufactured by the W. E. Hill Company, predecessor to the Hill-Curtis Company.

The Hill-Curtis Company has a number of other large buildings, one being a woodworking shop and office; one being used for pattern storage and one for the forge shop. There are, of course, various storage sheds. The new organization is coming along rapidly in sawmill machinery manufacture and marketing.

Unique Exposition at Grand Rapids

Every foot of the 50,000 square feet of floor space on the first floor of the Klingman building, Grand Rapids, Mich., has been contracted for by manufacturers and dealers who will take part in the exposition which will open November 28. It is in behalf of the better homes movement. Robert W. Irwin is chairman, and the others in charge are well known business men who are earnestly promoting the exposition as a means of community betterment.

A leading feature consists of twenty-one dwelling rooms in suites of from five to eight. This interesting and educational work, showing how rooms should be planned and decorated, has been carried out by the designers of furniture and decorators together with the public schools. Something like eight or ten carloads of painting, decorations and artistic goods will be used in this educational work. The designers and decorators have appointed committees to act as guides during this exposition and thus explain the purpose and objects of the better homes movement.

The Grand Rapids Furniture Manufacturers' Association has taken 10,000 square feet of space, to show furniture made in that city. The Association of Retail Furniture dealers will utilize about 3,000 square feet of space with furnished rooms. Builders & Traders Exchange and the Lumber Dealers' Association, together with the Electrical Manufacturers' Association and the Plumbers' Association, have taken about 5,000 square feet of space for community exhibits.

The decoration feature will be further carried out through the co-operation of the Grand Rapids Art Association which will bring to the exposition from November 28 to December 8 the exhibition of paintings, home decorations, etc., of the Chicago Art Institute Extension Course with lectures by Ross Crane.

Government Wins Out in Arkansas Land Case

The case of Lee Wilson & Co., Wilson, Ark., against the United States of America was recently decided by the Supreme Court of the United States, upholding the decisions formerly entered in the case by the circuit court of appeals for this circuit and the United States district court for the eastern district of Arkansas quieting title to the 800 or 900 acres of land involved in the United States Government. This case is commonly known as the Moon Lake case, and is the first of some ten or twelve cases filed on behalf of the government to quiet title to large areas of so-called

sunk lands lying in eastern Arkansas. Altogether some 100,000 acres are involved, and for the most part the lands are covered with fine growths of timber of different kinds. These lands were nearly all claimed adversely to the United States by lumber, land and timber companies, and the fight to maintain title to them has been long and fierce. These cases had their origin in 1908 when the Secretary of the Interior decided that the so-called sunk lands belonged to the United States and declared them to be public unsurveyed lands, later ordering a survey to be made of them for the purpose of opening them for entry according to the general land laws of the government. Pursuing this position, the Department of Justice took up the fight in 1913, and filed suits to quiet title to these lands in the Government. On hearing the case above in 1914, Judge Jacob Trieber of the district court sustained the contentions of the Attorney General and entered a decree quieting the title in the United States. Appeal was taken to the circuit court of appeals, which tribunal in 1915 upheld the decision of the lower court. Appeal was then taken to the supreme court, and the above decision is the result. The effect of the decision will be far reaching, as it practically settles the question of title raised in all of the cases, since they are all of practically the same nature and involve the same questions. The cases have been watched with a great deal of interest by the lumbermen of the state, as well as the other citizens, particularly those living in Northeast Arkansas.

Brisk Trade in Southern Hardwood Lands

J. H. Hines, president and general manager of the Hines Lumber Company, Memphis, announces the sale of approximately 20,000 acres of hardwood timberlands and cutover properties in Arkansas and Louisiana recently, involving a consideration of nearly \$500,000.

The largest transaction covers the sale of the W. P. Brown & Sons Lumber Company, Louisville, Ky., of 12,000 acres of hardwood timberlands near Brasfield, Ark., for a consideration estimated at \$300,000. It is suggested that the new owner will proceed without delay with plans looking to the increase of its manufacturing operations approximately 100 per cent. This will be effected in part through the installation of additional machinery and in part through night shifts. The Hines Lumber Company only recently secured this property from the Wisark Lumber Company, Janesville, Wis. Further details are given elsewhere in this issue.

The second largest transaction covers 4,000 acres of hardwood timberlands near St. Joseph, Tensas parish, La., sold to Wood & Blair, Parkin, Ark. The new owners have already announced their intention of installing a single band mill at some point on the Missouri Pacific for the development of the timber on this property. The same firms recently purchased the Russell Gardner tract in Eastern Arkansas which was used for years as a hunting preserve.

The other two transactions covers 3,000 acres of cut-over lands near Lake Village, Chicot county, Ark., sold to A. J. Weisinger, of Pritchard, Miss., and a farm of 358 acres near Lepanto, Ark., sold to Dr. Benjamin Strong, Chester, Miss. The former will be used as a live stock farm where the owner will make a specialty of raising Hereford cattle and Duroc Jersey hogs. The latter will be used for the growing of cotton and other crops but a considerable portion of it will have to be cleared first.

Real estate dealers in Memphis and vicinity are enjoying the most active demand for timberlands and for cut-over properties they have ever witnessed and they are finding business in these so much more profitable than that in city real estate that they are devoting practically all of their time thereto. The high prices of agricultural products are greatly stimulating demand for cut-over lands and the resultant enhancement in the value of the latter necessarily increases the value of timber lands themselves. Cut-over property was a big burden in years gone by but it is an asset of the first magnitude now and promises to increase in both importance and value as the price of agricultural products work toward a higher level.

Pertinent Information

Lines Formed For Rate Battle

Lumbermen are at Washington in force to oppose the 15 per cent general rate increase for all railroads now being heard before the Interstate Commerce Commission. Among those attending the hearings are J. H. Townshend of the Southern Hardwood Traffic Association; J. V. Norman and Edward A. Haid, attorneys representing that organization; George L. Forester, secretary-treasurer and traffic manager of the Western Carolina Lumber and Timber Association, Asheville, N. C.; G. F. Thomas representing Arkansas soft pine lumber concerns, and others. Gen. L. C. Boyle of Kansas City and A. G. T. Moore of New Orleans were expected when the hearing opened.

The hearing for the first day was general testimony introduced by railroad presidents. The whole commission was present. Clifford Thorne headed counsel for shippers, who are from many lines of industry. On the second day the hearing simmered down to a small affair conducted by Examiner Disque of the commission.

Lumbermen were successful in applying for a separate hearing on their commodity. It is set for November 13, which, however, will be shared

by cement and ice shippers. The hearings until that day cover many commodities, general rates and fifteenth section applications of the railroads, and several suspension cases including I. & S. dockets 1124, 1125, 1134, 1142, 1131.

Beginning November 15 the whole commission takes up the case again and railroad executives will be cross-examined by shippers that day. Next day shippers will present testimony as to finances and other conditions of the carriers and on the 17th the commission will hear arguments on the whole case. It is hoped to get a decision in December.

The case involves the question whether the railroads of the whole country shall have a 15 per cent increase in all rates on lumber and other commodities on which the commission did not grant a similar increase some weeks ago in its first report on this case.

In the combination case of the Buffalo Lumber Exchange against Alabama Central Ry. and the suspension of lumber transit privileges at Buffalo, the commission announced today that a second amended petition for the division of through rates would be accepted and filed.

The Nichols & Cox Lumber Company of Grand Rapids has filed complaint against the New York Central Railway alleging that by reason of a discriminatory embargo it was compelled to suffer delay and pay excessive demurrage and other charges on gum lumber shipped from Helena, Ark., to Dupo, Ill. thence to Buffalo, but reconsigned to Rochester, N. Y., and later to Medina, N. Y. Defendants refused to reconsign as requested and held shipment permitting heavy demurrage to accrue, when they should have reconsigned in accordance with their tariffs, the complaint says. Reparation of \$240 is asked.

Late I. C. C. Decisions

The Interstate Commerce Commission has approved the application of the railroads under the fifteenth section of the interstate commerce law as recently amended for permission to file tariffs providing for rates on furniture in Central Freight Association territory on the basis of 126 percent of fourth class rates.

The commission has received applications under the fifteenth section from railroads affecting the following subjects:

St. Louis-San Francisco Railway, agricultural implement, sleigh and vehicle wood in the rough, carloads, from Joplin, Mo., to Clinton, Ia.

Illinois Central Railroad, wooden handles, carloads, from Monroe, Wis., to Chicago, Ill.

The complaint of Peshtigo Lumber Company against Wisconsin Northwestern Railway et al., has been dismissed by the commission, which denied claims for reparation on account of the alleged misrouting of various shipments of saw logs from Taylor's Rapids, Wis., to Peshtigo, Wis., over an interstate route.

Examiner A. R. Mackley of the commission has submitted a tentative report for consideration in the complaint of the Diamond Lumber Co. against Chicago, Milwaukee & St. Paul Railway, which is summarized as follows:

1. Complainant's allegations of unreasonableness and undue preference in the distribution of defendant's logging cars on its Superior division during times of car shortage held not to be sustained.

2. The situation as to cars discussed and conclusion reached that the distribution of these logging cars by fixed rules would be impracticable and that the discretion of the chief train dispatcher or other employee of the defendant must finally govern upon the facts in each case.

3. The commission is not warranted upon the facts of this record in ordering that the flat cars involved be equipped with bunks and chains or with patented sticks for holding on the logs or that the defendant's present supply of logging cars on this division be increased.

4. Complaint dismissed.

The case involves the transportation of logs from complainant's timber tracts at Camp Tolfree, Mich., to its sawmill at Green Bay, Wis., and the complainant's request is for an order requiring that it be furnished a minimum requirement of from twelve to fifteen cars per day.

Finding Uses for Elder Wood

No possible timber resource in England is being overlooked during these times of stress. The following item from an English exchange enters somewhat into particulars:

Rarely have we noticed the timber of the elder offered for sale, yet last week no less than three parcels, one rather large, were offered in various parts of England. In Surrey very fine logs were offered at \$13.75 per ton put on rail, and in another case quite a large quantity, fresh felled, in 13 feet lengths, with a promise of prompt delivery is advertised. Privately, in Kent, a small lot, about seven tons, have recently been cut, and as some of the trees were over 15 inches in diameter and sound and clean we anticipate a speedy change of hands. Elder timber, which is white, close-grained and very compact is valuable in quite a variety of ways, and when of good size, like some of the trees that are at present offered for sale, is sought after for printing blocks and the inlaying of expensive furniture. It can be readily made to imitate box or mahogany. Many years ago quite a large quantity was sold in Carnarvonshire at \$10 per ton, but evidently prices have gone up, as nearly half as much again is being asked for this little known and rarely offered timber. As everyone knows, apart from timber production, the elder is perhaps the best tree for withstanding fumes from collieries and chemical works, while for withstanding long-continued blasts from off the sea and thriving down even to high-water mark it has few equals. Then for growing beneath the shade and drip of large trees it is, perhaps unsurpassed.

Two species of elder in the United States attain small tree sizes, but it does not appear that any use has been found for the wood. One is the Mexican elder found from Western Texas to Southern California, and reaching a trunk diameter of a foot or more. The other is pale elder which grows from Utah to Washington and is sometimes 18 inches in diameter. The above description of the English elder wood applies fairly well to the two western American elders, and uses for this wood might be found.

Furniture Dovetailed Together

Some of the finest Chinese furniture is put together without nails, screws, pegs or glue. All the joinings consist of blind dovetails. A set of such furniture, consisting of eighteen pieces, elaborately carved, and made of the celebrated Chinese black wood, was recently placed on exhibition at a furniture show at Toronto, Canada. The furniture was formerly used in the British embassy at Hongkong.

Boys in Furniture Factories

The public schools of Evansville, Ind., have made arrangements with furniture manufacturers of that city for boys who attend manual training classes to put in a few hours daily learning the practical side of furniture making in the factories. Such experience will do the boys good and the help will be welcome in the factories where labor is often scarce. The boys can learn more rapidly in a factory than in a manual training class; but in Evansville the boys will have both kinds of instruction.

British View of 1918

The London *Timber Trade Journal*, in a forward survey of timber prospects for 1918, has this to say:

That there will be a great demand for timber next year is a certainty. If, unfortunately, the war still continues, the pace of military operations must be more rapid, and the more mobile operations will entail a greater consumption of wood. The great climax of the struggle can only be reached by a vaster output of all descriptions of munitions of war, and in the manufacture and transport of all war material wood forms a very important item. If, on the other hand, peace is declared, there is no need to enlarge on the prospects then before the timber trade. There must be enormous competition for all goods which can be promptly imported, and, naturally, during the coming months there will be considerable anxiety on the part of our regular importers to make some arrangements. Quite different prospects are opened up according as the belief prevails in peace or war conditions in 1918, but in both cases it is felt that the problems before the trade should be tackled in good time. In the American markets also private importers will have many difficulties with which to contend. The governments of Great Britain and the United States are co-operating very closely in all trade matters, and the control of the tonnage over the Atlantic is so important in view of the very large quantity which will be required for the transport of the American army and its supplies, that no great hopes are centered on American timber while the war lasts. Scandinavia holds out the best hopes, and it is on the Baltic productions, supplemented by shipments from the west coast of Scandinavia that the ordinary trader will have to rely in 1918. The overlying stocks in Sweden will be very heavy, and there will be plenty of scope for winter negotiations, if only the trade can obtain reasonable freedom of action.

The Fuel Value of Wood

Persons who plan to relieve the coal shortage this winter by burning wood can figure, roughly speaking, that two pounds of seasoned wood have a fuel value equal to one pound of coal, according to experts of the Forest Service. While different kinds of wood have different fuel values, the foresters say that in general the greater the dry weight of a non-resinous wood, the more heat it will give out when burned.

For such species as hickory, oak, beech, birch, hard maple, ash, locust, longleaf pine or cherry, which have comparatively high fuel values, one cord, weighing about 4,000 pounds, is required to equal one ton of coal.

It takes a cord and a half of shortleaf pine, hemlock, red gum, Douglas fir, sycamore, or soft maple, which weighs about 3,000 pounds a cord, to equal a ton of coal, while for cedar, redwood, poplar, catalpa, Norway pine, cypress, basswood, spruce, and white pine, two cords, weighing about 2,000 pounds each, are required.

Weight for weight, however, there is very little difference between various species. Resin affords about twice as much heat as wood, so that resinous woods have a greater heat value per pound than non-resinous woods, and this increased value varies, of course, with the resin content.

The available heat value of a cord of wood depends also on the amount of moisture present. When the wood is green part of the heat which it is capable of yielding is taken up in evaporating the water. The greater amount of water in the wood the more heat is lost.

Where wood is to be burned in a stove or furnace intended for coal, it will be found desirable, the foresters say, to cover the grate partly with sheet iron or fire brick, in order to reduce the draught. If this is not done the wood is wasted by being consumed too fast, and makes a very hot fire which in a furnace may damage the fire box.

Wood-Working Machinery Abroad

United States consuls and commercial agents in foreign countries, particularly in England and France, have recently made reports concerning prospects of selling American woodworking machinery abroad after the war.

Timber grown in the United Kingdom consists of oak, ash, and beech of the harder kinds, and soft elm. Pine and fir, as well as spruce, are grown in large quantities in Scotland. Considerable birch is grown throughout the country. Imports include mahogany from Africa and Mexico, teak from India, and pine from Russia, Norway and Sweden. Canada and the United States supply great quantities of pine. A substantial amount of timber is sawn in the Midlands of England, although the larger mills are found at the various ports, such as London, Liverpool, Hull, etc., from 75 to 80 percent of the timber sawn in this district being imported.

In former years a good deal of American woodworking machinery was used, but British manufacturers of this class of machinery have made such progress of late that they have obtained most of the trade, and the machinery now used is generally of British manufacture. They have

copied American designs whenever this has been possible and in some instances have purchased the patents. The new patents and designs act has increased the tendency to purchase these patents or obtain the rights to work them on a royalty basis.

There is no prejudice against the use of American woodworking machinery, but British manufacturers are on the ground and have reached the point where they largely control the market.

IN FRANCE

Pine is the most plentiful and important timber grown in France, and that fact should be borne in mind by those who wish to sell machinery in that country. The French have made most of the woodworking machines used in that country, though a few are American. Before the war some machines were imported from Germany.

There is a probable opening in Spain for American woodworking machines to take the place of those formerly supplied by Germany. None are now imported from that country and none can be while the war lasts.

Building Permits for October

Considering the well known fact that the building industry is laboring under adverse conditions, the showing for October is not exceptionally bad, as things have been going of late. Outside of those immediately interested in construction work, there is no wide spread appreciation of the leading part which our builders have occupied in the constructive energies of the nation, and of the importance of not only keeping it alive but of keeping it above the point of struggling for its existence. In spite of discouragements, the building permits, issued in 109 principal cities of the country, as officially reported to the *American Contractor*, Chicago, total \$56,251,179, compared with \$87,692,090 for October, 1916, a decrease of 35 per cent. The decrease in September was only 27 per cent, but in August it was 33 per cent. The total number of buildings, for which permits were issued in these cities during October, was 20,435, compared with 29,509 for October last year.

Many causes are contributing to this considerable shrinkage in building construction. One is the practical impossibility of procuring structural shapes for the larger type of buildings, the government necessities rightfully taking priority. There are steadily widening areas, throughout which buildings are becoming irksomely scarce, not only for the housing of workmen in factory districts, but for many purposes, and this scarcity is beginning to quite noticeably increase the cost of living through increased rentals. Public policy would seem to dictate the largest extent of construction work possible, consistent with the government necessities.

There are a few cities that distinguish themselves in this tabulation by their gains over October last year. Of the 109 cities reporting, 25, or nearly one-fourth, make favorable showings. The most important of these is Boston and vicinity, which makes the notable showing of \$12,319,000, compared with \$7,591,000 for October, 1916. Most of the larger cities show radical losses, which is due to the almost entire cessation in the construction of steel frame buildings, because the steel shapes have not been procurable for early deliveries.

The Locust Tree in Favor

The *Timber News* of London, England, advocates the planting of waste land in that country with American locust; that is, yellow or black locust, the species which is just now in great demand for treenails and which is always in demand for fence posts and buggy hubs. Trials have shown that this tree grows well in England's climate. Originally it was confined in the United States to the Middle Atlantic region, extending three or four hundred miles inland. It has spread, by planting, to all parts of the United States. It does best in deep, fertile, well-drained soil, and it matters little how stony it is. But in most parts of this country it is an unprofitable tree because of the attacks made upon it by a beetle known as the locust borer (*Cylocne robinæ*) that devours the trees, beginning with the branches and quitting when only a portion of the dead trunk remains. This insect is the great drawback to planting locust. In portions of this tree's original range it is nearly immune to the beetle's attacks. No information at hand shows that these insects have ever attacked planted locusts in Europe.

Beetles Bide Their Time

It is somewhat strange that timbers which were immune to the attack of beetles during hundreds of years should suddenly fall a prey to the insects. That is the situation at Westminster Hall, England. During centuries the timbers of the massive roof stood untouched by the wood-boring beetles; then the insects began to bore, and it is said that four or five years will be required to kill the bugs and repair the damage. The work must go forward during the war, because it cannot wait. The beetles are killed by washing the affected timbers with cedar oil. The fumes are so poisonous that workmen are compelled to wear gas masks. Timbers which are so much weakened that they are in danger of collapsing are being braced and reinforced. No explanation is offered why no attack by beetles was made during the past four or five hundred years.

Leather from Fish Skins

A company has taken over an old tannery in Pittsburgh with the intention of operating it hereafter exclusively for the handling of fish skins. The company advises the Bureau of Fisheries that, at the outset, it will be able to handle 150 skins daily and that it is in the market for any shark skins 2 feet or more in length.

Furniture Making in South Africa

Consul J. P. Bray at Johannesburg writes as follows in a recent report: The wooden household fixtures on sale in the stores at the present time, it has been thought that it was obtained of the somewhat huckle-fancey of the natives to consider that furniture of the case. The steel tube factories of Birmingham and elsewhere are probably being utilized for other material of various kinds.

The figures contained in the official returns of imports tell a tale of increased activity in the Union. During the four years from 1913 to 1916 the import of household material, out as these were largely of the steel variety suitable for hospital work, they scarcely apply to the general furniture trade. The import of curtains, carpets, horse hair, etc., shows no diminution in quantity over the four years, but it is clear that the price has been increased for all these commodities. On the other hand the quantity of general furniture shows a large decrease, as indicated by the total of £297,043 in 1913, £205,763 in 1914, £112,473 in 1915, and £134,271 in 1916.

Since last year the imports have dwindled to a very small figure. For May last they were £1,126 against £21,308 in May, 1916, while for the five months ended May 31 the total was £8,496 against £38,239 in the corresponding period of 1916.

Since 1915 the bulk of the furniture has come from America, in proportion as the exports from the United Kingdom have fallen off. From Japan already fairly considerable quantities of furniture made after European styles are being imported. The Japanese have not long been engaged in this class of export trade, and their product is not of the best quality, but with characteristic adaptability it is expected that they will soon accommodate themselves to new requirements.

Meantime, since the outbreak of war and the rapid increase in the price of the imported article, the furniture industry of the Union has shown phenomenal growth. The larger factories are still at the coast, Cape Town, Durban, and Port Elizabeth, where labor is considerably cheaper than it is in Johannesburg. Large new factories have sprung into life in all those centers, more particularly in Cape Town.

Most of the raw material is obtained from America and Japan at present, and consists of various woods suitable to the purses of middle-class people. Teak and oak are the favorite woods, and the style of furniture is that which has been called Jacobean. There are several beautiful native hardwoods in the Union suitable for the manufacture of furniture; but the expense of the work, according to a well-known manufacturer, is prohibitive to the ordinary trade. The well-to-do householder is the only customer for this class of furniture.

The effect upon industry in Johannesburg is seen in the opening up of many small establishments where the finishing stages of furniture manufacture are completed. Small employers have erected machinery and plant sufficient to employ as many as a couple of dozen more or less skilled hands. Nevertheless the main body of the manufacturing trade is still at the coast, and will remain there so long as the difference in the scale of wages is maintained.

The opinion is not lightly expressed by many of the well-established business houses that the class of furniture now being made in South Africa for ordinary every day use is rather superior to the furniture which in past years was imported from overseas in pieces and joined together in this country.

Mangrove Bark in the Philippines

Commercial Agent C. E. Bosworth, writing of tanning material, says:

Mindoro is one of the larger islands of the Philippine group. It is a province by itself and contains 3,983 square miles. It is distant from Manila a little more than 100 miles or twelve hours by steamer. Along the shores of this island are considerably more than 30,000 acres of mangrove swamps, with large trees in practically virgin growth, conservatively estimated to yield 50,000 tons of bark, readily convertible into approximately 17,000 tons of cutch. Just why this advantageously located growth of our own should have remained untouched for so long it is hard to understand.

The Fly Swat Handle

The handle of a fly swat is about the smallest handle on the market, but in the aggregate these sanitary machines consume a lot of wood. A city in Australia has let it be known in the United States that it would like to try out a sample lot of 5,000 such handles, and if they prove satisfactory, large orders will be placed. The order would have to be large if it could not be filled from the waste of nearly any large sawmill in this country.

Killed by High Postage

A movement was under way for some time looking to the publishing of a magazine by the National Lumber Manufacturers' Association for the purpose of increasing the use of wood. It now seems that the scheme is on the shelf for the time being. The proposed increase in rates of postage, which went into effect November 2, puts a quietus on the project, according to a statement in a special bulletin issued by the association giving the proceedings of a meeting held in Chicago October 9-10, by the standing committees of the association.

Maple Sugar's Great Opportunity

The scarcity of cane and beet sugar and its high price in all parts of the world ought to give maple sugar a chance, such as it never had before. There is no possibility that enough sugar can be made from maple to make up what is lacking from other sources, but those who have groves of trees ought to be able to make a profit next spring from the output. In addition to what will be made for commercial purposes, thousands of farmers in all parts of the sugar maple's range will be able to supply themselves, wholly or in part, from trees growing on the farm. This will help the general situation by lessening the demands upon the sugar

market. A dozen maple trees should go far toward supplying a family with sugar, and many a farm has more than a dozen trees that might be made productive.

Cost of Cordwood in Holland

The coal supply in Holland is totally inadequate and the forests are being cut for fuel. The price of cordwood ranges from \$25 and \$50 per cord, depending upon the kind. Even at those prices the supply is going so rapidly that the government is planning fuel tickets to limit the use of wood to the lowest possible figure in order to prevent the destruction of the forests. The people of the United States complain of fuel prices when they are paying less than one-fourth what the Hollanders pay. At prices they are paying it would be a poor acre of woodland which would not bring a gross return of \$400 for cordwood. At such prices, the temptation to cut forests is very great.

Hardwood News Notes

< MISCELLANEOUS >

The capital stock of the Western Refrigerator & Manufacturing Company, St. Louis, Mo., has been increased to \$75,000.

The Wesfield Box & Shook Company, Westfield, Mass., has sustained a loss by fire.

A meeting of the creditors of the Brown Hawkins Lumber Company, Detroit, Mich., was called recently.

At Helena, Ark., the Superior Chair Company has been incorporated with a \$12,000 capitalization.

The Superior Wood Heel Company is a new corporation at Haverhill, Mass. The capital is \$25,000.

A creditors' meeting of the Coats Manufacturing Company, Wellsville, N. Y., has been called.

The following increases in capital stock have been made by Wisconsin concerns: the Badger Basket & Veneer Company, Burlington, to \$50,000, and that of the Fountain-Campbell Lumber Company, Ladysmith to \$250,000.

The Rusk Box & Furniture Company, Hawkins, Wis., is now operated under the style of the Rusk Manufacturing Company.

The House Folding Crate Company has been incorporated at Detroit, Mich.

The Phoenix Planing Mill Company, Atlanta, Ga., is an involuntary bankrupt.

The Williams Lumber Company, with headquarters at Fayetteville, has bought out the Virgin Hardwood Lumber Company at Gonce, Ala.

At Huntington, W. Va., the United Basket Company has been incorporated. Other recent incorporations are: The Blue Ridge Timber Company, High Point, N. C.; the Liverpool Hardwood Company, New York, N. Y.; the Big Rapids Furniture Manufacturing Company, Big Rapids, Mich.

The Oil City Woodworking Company has moved from Reno, Pa., to Oil City.

The Traphagen & Hull Manufacturing Company, Kingston, N. Y., has filed an involuntary petition in bankruptcy.

< CHICAGO >

Frank B. Robertson of Ferguson & Palmer, Memphis, showed on the Chicago horizon about the middle of the week and added his quota to Chicago hardwood sales during a stay of a few days.

J. A. Gorman, sales manager for the Viles County Lumber Company with offices in Chicago has been given a commission in the second forest regiment (20th engineers). He has been in training at Ft. Sheridan, Ill., in the second officers' training camp and was transferred to the forestry regiment at the instance of lumber friends.

W. M. Farris of the Farris Hardwood Lumber Company of Nashville, Tenn., spent some time in Chicago last week.

Charles Gill of the Gill-Andrews Lumber Company of Wausau, Wis., was in Chicago last week on a brief business trip.

R. B. Goodman, O. T. Swan and other prominent Wisconsin operators and prominent officials in the Northern Hemlock and Hardwood Manufacturers' Association were in Chicago this week in conference with prominent Chicago members of the association on matters of vital interest to the northern hardwood trade.

W. W. Dings of the Garetson-Greaseon Lumber Company, St. Louis, Mo., was in the city a few days of last week. Mr. Ding's hardest work when here is to find time to do his business. He has so many warm friends that he is considering the expedient of holding a general reception on his day of arrival in the future, thus giving him a chance to shake hands all around and still have time to sell a few cars of lumber before he leaves.

S. M. Burkholder from Crawfordsville, Ind., the dean of the Hoosier hardwood fraternity, spends quite a bit of his time with his son Roy who is running the company's big hardwood mill at Homer, La. Mr. Burkholder, Sr., was in HARDWOOD RECORD offices last week. He expressed the belief that it won't be long before the southern negroes who have

been invading the North will be moving with the sun back to the warm climate of the southern states.

Frank C. Wright, vice president of the Bangor and Aroostook Railroad with headquarters in Bangor, Maine, has been spending considerable time around lake states hardwood operations lately. Mr. Wright is desirous of interesting practical operators who have succeeded in the lake regions but have the prospect of being soon cut out, in the splendid birch, maple and beech timber which abounds in the region served by his road. This timber is not being touched, the operators in Maine contenting themselves with the softwood and pulpwood operations. There seems to be a striking analogy between conditions in Maine today and those which existed in the lake states in the old pine days.

Frank Purcell of Kansas City, Mo., famous in walnut circles hit Chicago this week on a hurried trip east. He paused long enough to show his enthusiasm over the present position and prospects for American black walnut.

Sam A. Thompson, manager for the Anderson Tully Company of Memphis, Tenn., was in Chicago this week. Mr. Thompson is beginning a three weeks' trip through eastern markets.

The Columbia Cabinet Company, city, has changed its name to the Columbia Phonograph Cabinet Company.

The Jennings Screen Company has incorporated locally.

The Wilson Brothers Manufacturing Company, Chicago, is the style under which the business formerly conducted as the Wilson Jacobs Drum Manufacturing Company is now operated.

N. J. Wall, A. C. Nelson and Martin R. Wall are the incorporators of the Centennial Desk Company at Rockford, Ill., with a capital of \$30,000.

◀ BUFFALO ▶

Hardwood concerns have been making some fairly large purchases of stock and some are beginning to arrange for next year's business. Certain woods are expected to be in steady demand as long as the war lasts and all hardwoods are regarded as good property, even though the war should continue through next year. The labor shortage at the mills has cut down the output and it is expected to be a long time before any surplus of hardwood lumber is found.

Frank T. Sullivan has added to his regular lumber business the Aero plane Lumber Company, a new \$10,000 corporation, doing this because he controlled quite a large amount of white ash timber in this state, which he knew was in much demand for flying machines. He is associated with Henry J. Turner, manager of the U. S. Hame Company, Buffalo, and Warren Ross of Jamestown. The plan is to use the Ross sawmill for working up the lumber and prepare a regular line for aeroplane uses.

Receipts of hardwoods by lake have been very light. The scarcity of boats and the high freight rates are causing the diversion of shipments to the rail lines.

The campaign for the second Liberty Loan in this city raised \$60,212,000, or \$5,000,000 more than the amount set by the government. This good work was accomplished by a thorough co-operation among banks and business men of the city. The lumbermen's subscription amounted to over \$1,000,000.

Buffalo is likely to take a step forward soon in the construction of steam vessels built of wood. The Union Drydock Company has not taken up wood construction and probably will not do so, but is engaged in building mine-layers for the government, two of which, about 155 feet long, will be ready in a few days for passage to the ocean. The Empire Engineering Company, formerly H. S. Kerbaugh, Inc., is working hard on a shipyard located at the lake front, back of the Terminal elevator, and will lay foundations for wooden-vessel construction at once. Weather permitting, a large amount of vessel building of wood, mostly small and moderate sizes, will go on this fall and through the winter. The yard and dock will be well protected, but very cold and stormy weather will hold the work up.

The Aberthaw Construction Company of Boston, has a contract for the erection of a large manufacturing plant on Vulcan street, outside the city line, in Tonawanda, to be operated by the Fore River Shipbuilding Company. The plant will in reality be owned by the United States Government, and turbines for the operation of destroyers will be manufactured. It is expected to be in operation within three months. The principal building will be 700 feet long and 300 feet wide and other buildings of smaller size will also be put up. The site covers twenty acres and was bought of the J. H. Williams Company, whose factory it adjoins. The new concern will give employment to at least 2,000 men, most of whom will be skilled mechanics.

Stanley H. Graves, salesman for Graves, Manbert, George & Co., and son of Luther P. Graves, whose death occurred last spring, died on October 24, aged thirty-one years. He left a wife and two children, his mother and several brothers and sisters.

◀ PITTSBURGH ▶

A. Rex Flinn, president of the Duquesne Lumber Company, has enlisted in the Officers' Reserve Corps, and is now stationed at Fort Meyer, Va. Sales Manager Herrmann of this company, reports Pittsburgh demand somewhat lighter than in the East.

The Aberdeen Lumber Company looks for quite an increase in buying in

January, 1918, and the company is concerned with getting up their stocks of gum and cottonwood, and will soon be in the market for more lumber of this kind.

The Kendall Lumber Company is running all its mills and is doing a nice business with the milling companies. In general, however, it finds trade pretty slow.

The Breitweiser Lumber Company is not rushed with business, according to Sales Manager Smith. A. G. Breitweiser, formerly a member of this company, is now with the Brooks Run Lumber Company, a hardwood concern in West Virginia.

The Pittsburgh Wholesale Lumber Dealers' Association and the Pittsburgh Lumbermen's Club are going to unite soon in a movement to promote house building in this city next spring, especially among wage earners. A big campaign of publicity is being arranged.

R. J. Rodgers, treasurer of the Allegheny Lumber Company, has entered war service, and is stationed at Washington where he is learning to be a United States Army Paymaster.

The Frampton Foster Lumber Company keeps its country mills busy, and reports an unusually good demand for oak timbers which are bringing most any old price. The tendency in general oak quotations is about the same as last month.

D. F. and E. E. Sites have bought a nice tract of hardwood timber near Seymoursville, W. Va., and will cut off the lumber in the near future.

The E. H. Shreiner Lumber Company reports from a recent trip from among West Virginia mills that oak is beginning to pile up in the mill yards of that state, and that quotations are somewhat easier this month as a result.

The Sattler Hamilton Lumber Company, Bessemer Bldg., is getting considerable good business from the manufacturers and L. L. Sattler believes that demand and prices will readjust themselves if they are given a fair and longer chance.

◀ BOSTON ▶

A complete new schedule of charges for surveying by the state inspectors has been prepared and will be petitioned for at the incoming Massachusetts legislature. All hardwoods (except loose strips) will be 50c per M. with a varying charge of 30 to 40 cents per M. on other woods in car and cargo lots, and 75c per M. on hardwood floors or strips if the bundles are to be opened. The revised scale is the subject of considerable attention and comment by the trade.

A hardwood mill, dry-house and storehouse is to be erected immediately by the Northern Woodenware Company at Mattawaunkag, Me. Gov. Carl E. Milliken and his associates in the large local lumbering operations are interested in the new enterprise which will employ about 100 hands and is expected to be running early in 1918.

The Wm. E. Bent Company of Springfield, Mass., is reported having assigned for the benefit of creditors.

On November 1, the N. Y., N. H. & H. R. R. raised its embargoes to New England points as it is now working under a joint committee with the Pennsylvania R. R. and the Eastbound Lumber Conference Committee at Norfolk, the object being to furnish the maximum number of permits that will be operative on all participating roads when issued. Richard Hackett, chairman of the New Haven committee may be addressed at Room 106, Gen. Office Building, N. Y., N. H. & H. R. R., New Haven, Conn.

◀ BALTIMORE ▶

The statement of exports of lumber from Baltimore during September shows no improvement as compared with the preceding months. On the contrary, the movement continues to narrow, and has now sagged to purely nominal proportions. The list is again reduced to four items, with spruce alone shipped in considerable quantities. In fact, spruce makes up all but \$3,000 of the whole exhibit, a total of 319,000 feet having been sent out, of a declared value of \$19,550, as against the whole declared value of not more than \$22,861. Gum to the amount of 13,000 feet, 25,000 feet of oak and 15,000 feet of white pine make up the balance of the list, as against six items of a declared value of \$93,059 in September, 1916.

Secretary Harvey M. Dickson of the National Lumber Exporters' Association had a conference in New York on October 23 with Connop Guthrie, the British minister of shipping, on the subject of the fifty-seven cars of hardwoods, which had been held up at different ports since March, 1916, under a British order in council. The promise that the cars would be released and that space on steamers would be provided in order that they might go forward, had been made, but complaints were piling up in the office of Mr. Dickson that nothing was being done to have the lumber go forward. Mr. Dickson went over the whole situation with the minister, with the result that arrangements were made to start a number of the cars in short order. There being no cargoes loaded at Newport News that require dunnage, the cars there are to be transferred to other ports, and it now looks as if the last of the lumber would be moving in a comparatively short time. Concerning additional exports, however, Mr. Dickson expressed the opinion that nothing could be hoped for.

In this connection it is to be stated that Mr. Matthews of L. O. Smith

CHOICE DELTA GUM Dry and Straight

& Co., Parkersburg, W. Va., and W. J. Callon, New Orleans, were here about the same time to look after some export shipments which had been delayed and which they desired to have moved.

At the Baltimore office of the Kosse, Shoe & Schleyer Lumber Company, Cincinnati, it was stated last week that the corporation is making extensive shipments abroad of walnut and ash, the former wood being used in the manufacture of aeroplane propellers, and the other for such purposes as gun carriages, stretchers and other war materials. The British military authorities have not followed the lead of Americans in the use of oak for propellers, regarding walnut as very much better and as in fact the only satisfactory wood. Walnut in considerable quantities is gotten out in the eastern states, West Virginia producing more than any of the others, though the entire East falls below the quantity produced in Indiana alone. It was stated that most of the shipments are sent by way of New York, under arrangements with steamship lines there. The company maintains a yard in the southwestern section of the city, where stocks are assorted, and those that will not do for the export trade are yarded.

Joseph Trimble Peters, president of the Bridal Veil Lumber Company, Portland, Ore., visited relatives here last week.

An interesting compilation on the factories in Maryland has just been made by Tunstall Smith, executive secretary to Mayor Preston, of Baltimore. It shows that in the ten years from 1904 to 1914 there was an increase of 347 in the number of factories, of 8,719 in the number of wage earners and of \$10,002,000 in the value of the amount of wages paid to them in the city. The increase in the state was 945 in the number of factories, 17,411 in the number of employees and \$17,648,000 in the amount of wages paid. In other words, the gain in the city was considerably larger than that in the counties. And the fact is also to be mentioned that the statistics do not cover the period of the war, during which there has been even greater growth than before.

The Maryland Contracting Company has obtained the contract for the clearing of the ground, the erection of foundations for the guns, the rearing of buildings and other work on the 35,000 acre tract which the government has taken over in Maryland as an artillery testing ground. The sum available for the land and improvements is \$7,000,000.

Smith, Hauser & McIsaac, builders of the cantonment at Camp Meade, Maryland, have secured the contract to erect some eighty buildings for the big military stores establishment which the government plans at Curtis Bay, just outside of Baltimore. According to estimates the improvements will call for an outlay of \$3,000,000.

◀ COLUMBUS ▶

An advance spot-light upon the activities of the Real Estate and Building Show, to be held in Columbus, Jan. 21 to 30, 1918, reveals an interest far beyond that expected at this date. The show will not be limited to an exhibition of Ohio building materials, for a large number of firms and individuals without the confines have asked for spacious reservations. The Columbus Lumbermen's Club in connection with the Ohio Retail Lumber Dealers' Association has taken half of one of the largest buildings, and plans to feature miniature houses in its exhibits.

The Fostoria Lumber Company, Fostoria, O., has been incorporated with a capital of \$50,000 to deal in lumber. The incorporators are: John B. and Raymond B. White, Edward D. Bradbeck, Elbert H. Burch and Oscar T. Shutt. The concern has taken over the business of the Standard Lumber Company.

The Delphos Bending Company of Delphos, O., has been incorporated with a capital of \$150,000 to do a lumber and bending business. The incorporators are: H. S., Ida N. and D. L. McLead, C. W. Obermeyer and Mary J. Justus.

The capital of the Harvard Lumber Company, Cleveland, has been reduced from \$50,000 to \$30,000.

William F. Galle, a well-known lumberman of Cincinnati died at his late home after an illness of about five years. He founded the firm W. F. Galle & Co., about thirty years ago.

R. W. Horton, of the W. M. Ritter Lumber Company, reports a good

demand for hardwoods from manufacturing establishments. Buying on the part of retailers is not active as they are only replenishing broken stocks. Prices are firm along the line.

Charles L. Shelton, proprietor of a box manufacturing concern, 231 Fletcher street, filed a voluntary petition in bankruptcy in federal court recently. His liabilities are \$15,529 and assets 3,400 according to the petition.

Five hundred homes will be erected on a 30-acre site, provided by the government, near Camp Sherman for the families of enlisted men, it was announced from the headquarters of Major General E. F. Glenn. The homes are to be built with money pledged by Ohio club women, representatives of whom were in conference with Major General Glenn.

The Capital Hardwood Company, Columbus, has been incorporated with a capital of \$10,000 to deal in hardwoods. The incorporators are: M. L. Knotts, R. P. Broadman, Samuel Weil, J. L. Murray and Fred M. McSweeney. The headquarters of the concern will be located in Columbus.

◀ INDIANAPOLIS ▶

A campaign of general interest to the hardwood trade of the entire country was launched here late in October at a meeting of the executive committee of the National Real Estate Association. The organization appointed a special committee, which will seek to form what will be known as an allied committee of all forms of business interested in home building for the purpose of starting a nation-wide "Own Your Home" campaign. Members of the committee said that all associations of lumbermen would be urged to co-operate in the movement. In addition to lumber organizations, this committee hopes to interest organizations representing the following types of business and professions in the movement: Hardware, furniture, paint, brick, cement, and banking. After the allied committee representing all of these interests is formed it is proposed to induce national advertisers that would be benefitted by extensive home building to insert in advertisements copies of the "Own Your Home" slogan. In addition, local associations of real estate men and lumbermen would be asked to conduct local advertising and publicity campaigns to supplement a national publicity campaign, in which would be featured the publication of interviews by well-known persons relative to the advantages of home ownership.

J. Panabker, a hardwood lumber dealer of Logansport, Ind., has been busily engaged recently in buying up large quantities of walnut to be used in manufacturing parts for aeroplanes for the government. He recently purchased a large number of walnut trees from a tract of land near Dunkirk, Ind., and this timber will be placed at the disposal of the government as soon as possible.

The Indiana Hardwood Company of Shelby, Ind., last week filed preliminary articles of dissolution. The company's charter will be suspended in a few weeks.

The Benham-White Company of Carothersville, Ind., was incorporated last week with a capitalization of \$17,000 to manufacture woodenware. The incorporators are Clyde W. Keach, Harlan B. White, and Alex W. Benham.

The Kewanna Lumber Company of Kewanna, Ind., has been incorporated with a capitalization of \$20,000 to buy and sell lumber. Directors of the company are John W. Long, Ralph W. McConnell, and Bert H. Thompson.

◀ EVANSVILLE ▶

The regular monthly meeting of the Evansville Lumbermen's Club will be held at the new Hotel McCurdy, Thursday night, November 13. President Worland will appoint several vacancies on standing committees and John C. Keller, traffic manager, will make a report on several important rate cases.

W. A. Black recently resigned his position as general manager of the Greer-Wilkinson Lumber Company, at Princeton, to engage in other business.

A large force of men is at work on the large Orr Estate in Knox county, Ind., a few miles north of here cutting a large strip of timber. The logs are being hauled to Kelley's Ripples on the Wabash river and as soon as there is sufficient water in the Wabash the logs will be taken by boat to Mt. Carmel, Ill., and from there they will be shipped to Paris, Ill., and Marion, Ind. Ash logs will be sent to Marion where they will be used for the manufacture of handles for the United States government. There is some talk of a large sawmill being built at Mt. Carmel to handle the logs from the Orr Estate. The timber on this estate is said to be the largest remaining tract of hardwood timber in southern Indiana.

Bert Tisserand, who has charge of the hardwood end of the J. C. Greer Lumber Company, says trade has been good all fall and he is looking for a nice business the balance of the year.

J. H. Moeller, former stave manufacturer at Mt. Vernon, Ind., who was here on business a few days ago, says he has not abandoned the idea of organizing a company to erect a factory at Mt. Vernon that will manufacture veneer, spokes, baskets and butter dishes. He has also taken an option on a piece of property at Mt. Vernon for the site for the new factory.

The annual convention of the Ohio Valley Improvement Association was held in Evansville, October 24 and 25. Resolutions were passed urging Congress to speed up the work on the Ohio river and to make larger annual appropriations for this work. The government dam that is being

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

built on the river, seventeen miles below here and known as Dam No. 48, is being rushed to completion and when finished will be the largest dam along the Ohio river and will cost over \$2,500,000.

MEMPHIS

J. V. Rush of Moffett, Bowman & Rush announces the purchase by his firm of 900 acres of hardwood timberlands in Coahoma county, Mississippi. It is estimated that there are about 4,000,000 feet of hardwood timber thereon, principally oak. The new owners will bring the logs to Memphis where they will be converted into lumber.

The Walnut Log & Lumber Company has filed an amendment to its charter through which it seeks to increase the capital stock from \$10,000 to \$50,000 and to change the name to the J. H. Hines Lumber Company. The application is signed by J. H. Hines, Mary L. Hines and the other principal stockholders. The company has its headquarters in Memphis. Mr. Hines was for years a member of Barney & Hines of Memphis.

It is announced that Charles T. McManus has purchased the interest of George H. Temple in the Chisca Lumber Company which was organized here some time ago and which has a mill in operation in Mississippi. The firm will continue along the same lines as heretofore under the management of Mr. McManus and W. I. Brashears.

May Brothers, New South Memphis, have attempted a solution of the labor problem through the employment of negro women at its plant and yards. About eighteen of them are now being used to pile lumber, drive wagons, and do other work that only men have done heretofore, and are proving a fair substitute. Other lumbermen are following suit to a moderate extent, with indications that female labor will be used on an increasingly large scale. Men simply cannot be had and the women are being taken because they are available. With the increasing scarcity of labor, there is a notable advance in the wages lumber manufacturers are having to pay.

Harry Anderson, who joined the first Reserve Officers Training camp at Fort Oglethorpe, Ga., this summer and who won a commission as captain of ordnance, Regular U. S. Army, is now "somewhere in France," according to information received by his father, Col. S. B. Anderson, president of the Anderson-Tully Company. In private life the former is an attorney and is also treasurer of the Anderson-Tully Company.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, left for Washington November 3 to be present at the hearing in the case involving a proposed advance of 15 percent on hardwood freight rates from Ohio and Mississippi river crossings into Central Freight Association and Eastern Trunk Line territory which began Nov. 5. J. V. Norman, Louisville, and Edward A. Haid, St. Louis, attorneys for the association, are also in Washington. It will require some time for the carriers to present their evidence in support of the higher rates the railroads are asking but Mr. Townshend and the attorneys will listen to the presentation of this testimony in order that they may know how to counter successfully. The association is strongly opposed to the advance and will do everything in its power to defeat it. The lumbermen are open to conviction on the proposition that the railroads in the territory in question may be entitled to higher revenues but they are of the very positive conviction that no further advance in freight rates should be allowed on southern hardwoods on top of the many advances which have been made in this item during the past four or five years. Mr. Townshend said, before leaving Memphis, that the association would have the earnest co-operation of all the principal hardwood interests affected by the proposed increase. It is representing about 90 percent of the southern hardwood producing section at Washington.

LOUISVILLE

With the exception of government business, placed either directly or indirectly with lumber plants of Louisville and vicinity, the demand for hardwoods this fall has not been especially sparkling, but there has been a very heavy demand for thick stocks of various hardwoods for manufacturing government orders, the demand in fact having been so heavy that the mills in some cases have been curtailing production of 3/4, 4/4 and 5/4 stock, and going stronger on stock of 6/4 and up. However, there is a fair surplus stock of the thinner grades on the market, and all orders can be filled promptly, that is, they can be filled if the cars can be supplied, and embargoes can be dodged long enough to hand the cars to eastern roads. Not much trouble is being experienced in Louisville in getting cars, or getting shipments out, but several of the carriers operating north of the Ohio are placing embargoes on shipments originating in the southern mills districts.

Among the principal buyers of lumber or timber for handling government orders in this section are the American Car & Foundry Company, a concern which has practically quit making coaches for railroads in order to build wagon and truck bodies, parts, table tops, and specialties; the Continental Car Company, which is working on similar lines; the Mengel Box Company, which has received several big orders; the Ross Chair Company; the Kentucky Wagon Manufacturing Company, truck bodies, parts and other equipment; and the Wood-Mosaic Company, which has a big gunstock order.

Due in part to the recent death of T. Smith Milton, secretary-treasurer of the Churchill-Milton Lumber Company, the company has moved its main offices from Louisville to Greenwood, Miss., where it operates its

dense hard oak, having another hard mill at Glendora. Tom Fullenberry, sales manager, and John Churchill, president of the company, left Louisville on Sunday, October 28, to establish their headquarters at Greenwood. J. Woodfolk will have charge of a small office, which will be maintained in Louisville. In leaving the city the company desired to continue as members of the Louisville Hardwood Club, and has asked to be placed on a non-resident membership list. No such provision was made in the charter of the organization, but an amendment will be made in order to keep the old members on the list.

The Mengel Box Company recently closed a deal at Dyersburg, Tenn., for the purchase of the timber on 5,000 acres of land, at a reported price of \$100,000, the deal being closed through W. N. Roth of Dyersburg. The company has several other tracts in Dyer county, and the lumber is handled through the plant at Mengelwood, Tenn. Arthur D. Allen, vice-president of the company, reported that the deal had been closed, but that the company would not start any additional operations at this time.

W. A. McLean, head of the Wood Mosaic Company, New Albany, Ind., has been named chairman of a southern Indiana district in connection with the raising of funds to carry on the Y. M. C. A. work in the army camps. Mr. McLean is district chairman for Floyd, Clark, Harrison and Washington counties, and has to raise \$22,000.

Another war contract has been almost landed by the Mengel Box Company, the company having been low bidder on a government contract for supplying 150,000 heavy ammunition boxes at a cost of \$560,000, the bid being the lowest of several submitted. Due to the fact that the company has handled several of these contracts for the government, and delivered the stock in satisfactory shape, there is little doubt but what this order will go to the company, which has had enough experience with handling these contracts that it knows just what it is doing, and stands to make a fair profit even though being the lowest bidder.

With a capital stock of \$10,000, the Long Life Lumber Company of Louisville, has been incorporated by Frederic H. Buerkel, William P. Castleman, and R. B. Robertson.

The Luther C. Moore Stave Company, which recently took a lease on the old John Dowling cooperage works at Lexington, Ky., is manufacturing rum shooks, for barrels of fifty gallon capacity, the shooks being knocked down in bundles of two barrels, and exported for reassembling by native coopers.

At Louisville the Booker Box Company is busy erecting iron clad sheds at its new brick box factory, which was recently purchased from the Kentucky Cotton Yarn Company for about \$50,000. The company expects to be operating the new plant before the first of the year.

King Marion Russell of K. M. Russell & Sons, lumber dealers of Bowling Green, Ky., died on October 31, following an illness of several months. In 1892, Mr. Russell and his late brother J. Nathan Russell formed the firm of Russell Brothers, which was later dissolved, each of the partners going into business with their sons.

At Tomkinsville, Ky., W. D. White is planning to greatly enlarge his axe handle factory, installing a finishing plant and spoke department. He recently took over the Jackson-Jenkins handle factory at Forkton, Ky., moving the equipment to Tomkinsville, and doubling his handle capacity at that point.

The Wood-Mosaic Company, New Albany, Ind., is having much difficulty in obtaining enough walnut logs to keep going on the big government contract for approximately 1,000,000 gunstocks. Small timber merchants are short of labor, as are also the farmers, and for the past few weeks very few logs have been cut, although the company has been offering top prices for 2,500 cars of logs.

W. E. DeLaney of the Kentucky Lumber Company, Lexington, Ky., was in Louisville last week for a day or so, and while here paid his first visit to Camp Taylor, where he showed much interest in the big construction work. Mr. DeLaney was also present at the weekly meeting of the Louisville Hardwood Club.

Although the labor and traffic situations are expected to give the lumber industry trouble during the next few months, financial conditions are looking up, and the majority of the lumbermen feel that business is promising, and that there will be no shortage of money. It is estimated that there is now more money in circulation than ever before, and that the Liberty Loan will result in a still greater amount of money being placed in circulation. The early fall lull in business is said to have been largely due to the fact that consumers of lumber have been busy placing their business on a war time basis, and figuring out just how the new tax propositions would affect them.

WISCONSIN

John Kadletz, Shawano, Wis., will build a small sawmill and planing mill on the Wisconsin & Northern right-of-way in that city. The main building will be 48 x 64 feet in size.

It is reported that Libby, McNeill & Libby, wholesale grocers, Chicago, are contemplating the establishment of a sawmill and box manufacturing plant in Waupun, Wis., which will serve its extensive needs throughout the country. The sawmill will be 70 x 120 feet and the box factory 50 x 150 feet, and the investment in buildings and equipment will be about \$75,000.

The Tipler-Grossman Lumber Company, Green Bay, Wis., hardwood wholesaler, has increased its authorized capital stock from \$50,000 to

\$100,000. The company recently decided to engage in the manufacture of hardwood lumber and is now erecting a saw and planing mill which will cost about \$50,000 complete.

The Ideal Plaster Board Company, which moved from Fond du Lac, Wis., to Milwaukee in February, is now able to make satisfactory purchases of machinery and equipment and is now establishing a plant at Thirty-second and Burlington street.

The Embarrass river, from Embarrass, Wis., to New London, Wis., is being cleaned for the last time by the Hatten Lumber Company, to clear it of dead-heads. The Hatten company sent its final log drive down the river last spring.

The Rhinelander Refrigerator Company, Rhinelander, Wis., has increased its capital stock from \$40,000 to \$75,000 to accommodate its rapidly growing business.

John W. Kieckhefer, principal owner of the Kieckhefer Box Company, Milwaukee, has organized the Kieckhefer Paper Company, with a capital stock of \$100,000. Mr. Kieckhefer several months ago purchased a large paper manufacturing plant in the Fox River valley of Wisconsin at receiver's sale.

J. H. Boggess, 21 North Union street, Fond du Lac, Wis., has organized the Boggess Manufacturing Company to engage in the manufacture of mop-wringers of his invention. J. J. Carberry is associated with him in the enterprise. A factory is being opened in the Haas building, Second and Macy streets.

J. J. Fitzpatrick, Madison, Wis., who has been associated with a number of mills and wholesale lumber concerns in Wisconsin for many years, has organized the J. J. Fitzpatrick Lumber Company to engage in the wholesale lumber business. Offices have been opened in the Wisconsin Life building at Madison. In recent years Mr. Fitzpatrick was connected with the Elliott Lumber Company.

Peter Lundquist, a well known logger of northern Wisconsin, has purchased 8,000 acres of timberlands near Laona, on the Poplar river, and will log the tract during the coming winter. A camp is being established at this time. The business will be operated under the firm name of Lundquist & Hanson.

The Albrecht Manufacturing Company, Kewaunee, Wis., manufacturer of boxes, crates, sash and doors, etc., is completing a new steam generating plant and enclosing the space between the two main mills to afford much-needed factory space. The entire plant is being equipped with a new steam heating and dust-collecting system.

The Oelhafen sawmill at Tomahawk, Wis., has closed for a month or six weeks for repairs and overhauling. The planing mill and other departments will continue in operation while the work is going on.

The Eau Claire Box & Crating Company, Shawtown, near Eau Claire, Wis., is extending its main factory 60 feet to provide the additional facilities required by its growing volume of business.

The Park Falls (Wis.) mill of the Roddis Lumber & Veneer Company, Marshfield, Wis., was shut down for annual repairs and will re-open about December 1. The company has sent more than 300 men into its various logging camps and expects to cut an ample amount of timber to keep both the Marshfield and Park Falls mills operating throughout the winter and late into next fall.

J. E. Sherman, Jr., and B. S. Sherman of Marquette, Mich., expect to conduct extensive logging operations in the Dead river country north of Ishpeming, Mich., during the coming winter. The central camp already has been established and two more will be opened later. The timber consists of spruce and mixed woods, mainly in stumpage. The logs will be brought to Marquette for manufacture.

The Gillett Supply Company, Gillett, Wis., has opened a large camp near Siding 83, five miles north of Long Lake, Wis.

The Park Falls Lumber Company, Park Falls, Wis., is building a complete cold storage, refrigerator and bakery plant in that city to supply its mills and camps with foodstuffs. Work is being rushed so that there may be no danger of a shortage of bread, meats and other foods for its employees during the coming winter.

The Willow River Lumber Company, Grand View, Wis., will operate seven or eight camps during the coming season. Five camps already are operating full blast. As soon as the required labor is available, the remaining camps will be opened. The first logs are expected at the Hayward mill late in November.

The Kiel Woodenware Company, Kiel, Wis., has taken occupancy of its new branch plant at Plymouth, Wis. The new factory will specialize in cheese boxes and the veneers will be shipped to Plymouth from its mill at Mellen, Wis. The Kiel plant is under the management of William Schnur.

The Dunphy Boat Manufacturing Company, Eau Claire, Wis., has started work on a government contract to furnish thirty-nine yawls for vessels of the United States Navy. Each boat is 24 feet long and weighs 3,500 pounds, and is equipped with the Gray motor. The hull is of heavy oak ribs. The yawls will be used for mine-laying. Two boats are being built every week.

The Railroad Commission of Wisconsin has granted the petition of the electric power companies in the Milwaukee district to increase their rates for energy by .31 cent per kilowatt for all power delivered in excess of 1,000 kilowatts a month. The increase affects only large consumers and amounts to about 22 per cent.

The Robbins Lumber Company, Rhinelander, Wis., has resumed logging.

operations and expects to put in about 5,000,000 feet during the coming season. Only camps No. 2 and 5 will be operated and sixty men will be employed in each. The Robbins company is completing work on its new sawmill in Rhineland and expects to put it into operation about Nov. 15.

The Langlade Lumber Company, Antigo, Wis., is installing machinery for reducing slabwood to make it suitable for use as a fuel in the home and thus is relieving the acute shortage of wood fuel in Antigo and vicinity. The facilities are being provided merely as an accommodation to the public.

The Sawyer Goodman Company, Marinette, Wis., is again operating its mills after being closed for nearly three months because of labor disputes.

The Kenne Bros. sawmill at Centerville, Manitowish county, Wis., has been purchased at foreclosure sale by the Oriental Mills Company, for \$2,000, the amount of the mortgage. The mill has been idle for several years but will be reopened.

M. P. McCullough, chairman of the Bureau of Trade Extension, Northern Hemlock and Hardwood Manufacturers' Association, has been elected acting president of the Employers' Mutual Liability Insurance Company of Wausau, Wis., to complete the unexpired term of Neal Brown, who passed away recently.

Wisconsin mutual liability companies writing protection for employers under the Wisconsin workmen's compensation act, made the best showing of all companies in premium income and low cost of doing business during 1916, according to the annual statement on compensation insurance just issued by the Industrial Commission of Wisconsin. The total net premium income of all companies operating in Wisconsin last year was \$1,783,887. The total management cost of stock companies was 41 per cent of earned premiums; of Wisconsin mutuals, 22 per cent; of foreign mutuals, 29 per cent, and of inter-insurance exchanges, 30 per cent. Total disbursements for losses by all companies in 1916 were \$1,289,673, or 74 per cent of earned premiums. The average management expense was 35 per cent.

The Hardwood Market

CHICAGO

Chicago is doing well in some directions and poor in others. A great quantity of lumber is clearing through this important market which goes into war uses, directly or indirectly, and on the other hand the normal consumption for lumber continues to be slack. There is an almost utter stagnation in the building trades and, of course, consequent further slackening off of hardwood demand going into building uses. Still in the face of great odds, the lumber markets are holding up in surprising fashion and very little cheap lumber is finding its way into this, or according to reports, into any other important markets.

Word comes from all mill centers of continued curtailment in production on account of logging and labor difficulties which tend to hold up the tone of quotations. The factories as a whole are fairly well stocked up on the lumber they need as they bought pretty freely in anticipation of shipping difficulties. Many buyers also seem to believe that there is further chance of the markets breaking and their disposition is to wait a little longer before placing orders. From the general tone though there is little chance of this hope being realized.

BUFFALO

The hardwood demand has slowed up to some extent within the past two or three weeks and the yards have been hampered by rainy weather, which has held up the filling of many orders. War-order business is still offering in fairly large volume. There is less doing than usual in either the building line or the furniture trade. It is a situation where specialties predominate and some wholesalers say the demand is largely for woods that nobody has, which is something of an exaggeration, for assortments here are larger than most anywhere else.

Among the woods most in demand are oak and ash, mostly in thick stock. One-inch oak is a slow mover, but there is sale for all the thick oak that dealers acquire. Maple is in fair demand, but is not so much wanted as it was a few months ago, and prices are said to be less strong. Whatever slowing down has occurred is attributed to the falling off in automobile trade. Gum was in good demand from these factories for a time, as a substitute for maple, but business is not as good in this wood as it formerly was. The demand for poplar, birch, cypress and one or two other woods is fairly good.

PITTSBURGH

Trade in hardwoods is beginning to suffer in sympathy with the falling off in demand for the pines and for hemlock. Hardwood wholesalers have expected little of the retail yard trade for some time. In October it was worse than ever and this month it does not give promise of being any better. Business with manufacturing concerns is dragging. Purchasing

All Three of Us Will Be Benefited if You Mention **HARDWOOD RECORD**

agents do not favor buying on a falling market and are waiting for still lower prices. Trade in medium grade hardwoods for mining purposes is fairly good. Considerable business is being done with the railroads on bridge and construction timbers. In general, however, it is certain that the total demand for hardwood is much smaller than in August and September, and with the inventory season right at hand, wholesalers do not expect any gain in this market before January.

◀ BOSTON ▶

The New England hardwood market continues to absorb moderate amounts of cabinet and finish woods; the demand for core and veneer is relatively greater than in the past, but there seem to be no items at present in such call as to record any further advances in price. The labor situation in the large centers is critical. Wages and conditions are better than ever before, but the quantity and quality of labor available is such as to discourage any hope of economical production or construction. Government works have served to increase the buying power of thousands of men and thus supplied a purchasing market which is expected to last for some time. Many furniture factories have been stocking up to a fair extent in anticipation of a reasonable demand for goods as well as provision for a long season of transportation prohibitions. These many activities turning for the present on the essentials of the war have been very favorable to this manufacturing territory, but there is of course much uncertainty how long it is to last and what developments await the trade upon the return of wholly commercial demands.

◀ BALTIMORE ▶

No important change is noted in the hardwood situation. All of the stocks in general use are called for with sufficient frequency to take up the output of the mills, but the railroad situation is worse and it is increasingly difficult to have shipments sent forward. Embargoes are more of an impediment than ever before, large sections being affected and virtually closed against trade, so that the business done is materially curtailed. The dealers never have orders in any considerable number ahead, being always near the last of the commitments, though, to be sure, new business continues to come in and the current keeps up in sufficient force to enable at least some of the shippers to make an impressive showing. It is the uncertainty of the situation that is complained of, calculations as to what may be done or is likely to be done being impossible at this time. As to the volume of business, reports vary. Some state that orders have fallen off and that the business has shifted to such an extent that stocks are sought only as deficiencies in the assortments may develop from time to time. Others again take advantage of every opportunity to increase their holdings or to get in new supplies, declaring that the lumber goes out as fast as it comes in. All complain of the car railroad service but the latter class exhibit decided optimism as to the outlook and take the view that the inquiry will continue active, with the range of prices high. Perhaps no division of the trade looks for a material recession in the range of values, and it is the outlook for new business that causes concern. Notice is taken of the fact that the chances of making sales for private account grow smaller, the government looming up more and more as one of the chief buyers. Of course, this is more the case with regard to southern pine than to hardwoods, but even these are wanted on government account to an extent that constitutes an important proportion of the whole, or the distribution is so interfered with by the requirements of the authorities in the way of railroad facilities that private orders must wait. It is also noticed that work not regarded as necessary for the conduct of the war has been gradually sidetracked for such activities as are in some way connected with the conflict and with keeping up military supplies. That this is bound to affect even the hardwood trade to an appreciable degree seems certain. Exports are very much restricted, except in some directions, and the outlook for a material widening of the foreign movement is by no means bright.

◀ COLUMBUS ▶

The hardwood trade in central Ohio territory continues strong in every respect. Buying on the part of retailers is limited to immediate wants, but factories are buying more liberally. Concerns making furniture and boxes are the best customers. Orders are being placed by factories making vehicles and implements. On the whole the tone of the market is satisfactory and prospects are believed to be good.

Retail stocks are fairly large but dealers are loath to accumulate a surplus under present conditions. Consequently, orders to replace broken stocks are placed, but little buying for the future is reported. Lower grades are especially active as there is a scarcity in such grades in certain sections. Building operations are not very active.

Shipments are slow in coming out. Lack of motive power is given as the principal cause. Mills are urging shipments but the railroads are unable to handle them. Embargoes against shipments to certain roads are also holding up deliveries. The railroad situation is anything but satisfactory and there is little hope for improvement during the winter months. Collections are fairly good, as money continues easy.

Plain and quartered oak is in good demand at prices unchanged from a fortnight ago. Poplar is one of the strongest points in the market and recent advances in the lower grades have been announced. Ash and basswood are strong and other hardwoods are unchanged.

LUMBER AND MILL WORK
 Elmira, N.Y.

November
 9th,
 1915.

Paepcke Leicht Lbr. Co.,
 Chicago,
 Ill.

Gentlemen:-

We are using your Red Gum lumber in the manufacture of our high class interior trim and general planing mill work.

This gum is giving excellent satisfaction, being highly graded, soft texture, good widths, and long lengths; also dry, straight and flat.

Respectfully,
 Harris, McHenry & Baker Co.

Dict.
 RME/AG.

Of course it is true that Red Gum

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

The inherently superior qualities of Red Gum can be brought out only by proper handling

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

Paepcke Leicht Lumber Company

 CHICAGO, ILL.

Band Mills: Helena and Blytheville, Ark.; Greenville, Miss.

◀ CLEVELAND ▶

Tightening of the hardwoods market all along the line is noted in the Cleveland district, in spite of the fact that a curtailment of building operations is noted with the advent of snow and real winter weather. Inability to obtain plentiful stocks, and prospects for meager shipments of mills, both from the South and the West, is taken as the cause for this condition here. This applies especially to the lower grades, which are in best demand. Oak and maple flooring still head the list, the outlet being in apartment, hotel and manufacturing buildings. The big demands on automobile concerns here from the United States government are affording a strong outlet for ash, hitherto rather quiet. All these materials have strengthened considerably in the last fortnight, and although prices have not been shaded, there is no indication that sellers are eager for business at present quotations. In the absence of plentiful supplies in any material, yards are stocking up wherever possible. Lack of labor, due to the inroads made by the draft, has caused a dearth of western products, notably fir and cedar. Advices received here this week indicate mills are preparing to shut down because of labor shortage, and chances for replenishment of local stocks of these and other western materials seem remote.

It is stated that bankers now look upon new building operations in the light of extensions, and that they wish to make their loans in a liquid state instead. Thus where considerable building might be under way, it has been impossible for loans to be negotiated. This is particularly significant in the matter of small house construction, which affords the principal outlet for hardwoods. On the other hand this condition has been offset somewhat by the increase in building operations generally in September, which showed an increase of more than \$134,000 over September, 1916. This condition does not prevail so markedly in the small towns and country districts outside of Cleveland and other big Ohio cities, and hence the outlet in that direction is being taken advantage of by the trade here.

◀ INDIANAPOLIS ▶

The demand for hardwoods is about normal. Consuming industries are buying steadily but their orders are not very large. Labor is one of the chief difficulties being faced by the manufacturers. This condition is becoming more acute with the result that many companies are now employing women and others are contemplating this plan. Workmen are constantly being taken from their duties by the army draft boards, and others are accepting positions with companies engaged in filling war contracts. In most instances the latter companies are able to pay higher wages.

There is an increased demand for the first grades of plain and quartered oak. No. 2 plain oak also is in better demand than it had been for the last few months. Thick stocks of gum, ash, and hickory are in fair demand, and many dealers report an improvement in the movements of poplar.

The sash and door trade is inactive as there has been very little activity in building circles. A heavy run of business is not expected until spring. Retail stocks are about up to normal, and the retail trade is doing little buying at this time. Prices are fairly well maintained.

◀ EVANSVILLE ▶

Trade with hardwood lumber manufacturers has not been brisk for the past month, yet a good many orders have come in and things have been moving along about as usual at this time of the year. It is predicted that November will bring in a larger volume of trade than October. Most of the up-town mills in Evansville are being operated on an average of from ten to fifteen hours a day, but only one of the large river mills is now running. While logs are more plentiful than they were, still some manufacturers report their supply is running low and prices on logs the highest they have ever paid. Collections are good. Lumber prices are holding firm and it is predicted prices on certain grades will continue to advance. Quartered white oak has not been in good demand for some time. Plain white oak is moving well and quartered sycamore has been in good demand up to a few weeks ago. Walnut is in fair demand, especially the best grades which are being used by the federal government in the manufacture of blades for aeroplanes. Gum has been off for some time. There has been a strike on at most of the large furniture factories in Evansville during the past three weeks and consequently they have not been in the market for any lumber. The closing of these factories has also affected the veneer business in this section. Poplar and ash remain in strong demand. Elm and maple are fair. A good deal of cottonwood is being brought in to supply the large box factories. Local retail business is only fair. Sash and door men report a nice out of town business. Planing mills have been fairly busy. Yellow pine dealers say their business is no better than that of last fall and local contractors and architects look for no improvement in building lines until next spring.

◀ MEMPHIS ▶

Better demand is reported for southern hardwoods than recently. The tone of the market is likewise better with greater independence on the

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

→ For Greatest Range of Uses ←

and

Easiest Handling

buy the

Hoosier Self Feed Rip Saw. This machine has earned thousands of dollars for owners in the manufacture of dimension lumber, crating, etc., because its entirely novel design, resulting in surprising ease of operation and adaptability, makes possible a profit where a loss is often expected in this work. The

Hoosier Self-Feed Rip Saw

has a positive and powerful feed which handles the heaviest material the sawmill takes just as readily as the lightest.

The table, raised and lowered with the crank in front of the machine, is always level—always securely locked.

The Hoosier rips anything up to 6 inches thick and 17 inches wide. It feeds 35, 75, 100 or 150 feet a minute.

Manufactured exclusively by

The SINKER-DAVIS COMPANY
INDIANAPOLIS, INDIANA

The "HOOSIER," the rip saw which makes profitable dimension manufacture and grade refining at the mill possible. Hundreds of users already—you will be another if you will let us tell you all about it—Will you?

part of owners because labor is scarce, car shortage threatening in production, and there is an increasing scale of cost. Stocks are considerably broken in a number of directions with the indicated curtailment of output. An actual scarcity of lumber is far more probable than any excess that will prove burdensome. Anticipated lower prices for lumber have not materialized and many orders are coming in from those who were holding back. Cars are going to become scarcer and that is stimulating the placing of orders by consumers who prefer to anticipate their requirements. Inquiries are more plentiful in most items and more orders are being actually booked. It is admitted that there is dullness in some classes of high grade lumber, but encouragement is felt over the more recent change for the better in market conditions.

There is good demand for the lower grades of cottonwood and gum. Box manufacturers continue to do a large business and their wants are heavy enough to take care of all Nos. 1, 2 and 3 common in both cottonwood and gum. There is also a good call for sap gum in the higher grades. Plain and quartered red gum in the higher grades, is moving with only a fair degree of readiness. Plain oak in stock thicker than 4/4 is wanted in considerable volume but inch common is in limited request, largely as a result of the diminishing business being done by the manufacturers of flooring. Heavy timbers are in good demand in practically all items and low grade stock of virtually every character is moving out about as fast as it is being manufactured. The stoppage of building operations in so many parts of the country and the restriction of furniture manufacturing operations are exerting an unfavorable influence on most high grade lumber and this is moving in less satisfactory volume than the lower grades.

Manufacturing operations are curtailed as a result of the scarcity of labor and the shortage of cars for handling logs to the mills.

← LOUISVILLE →

During the latter part of October business showed an appreciable increase over what it had been in the earlier fall, and a number of local hardwood manufacturers report November business as the best of the fall season. While orders are not running in large numbers, the volume is heavy enough to keep the mills going. Traffic conditions are on about a par with those experienced in 1916, and many operators are backward about quoting any future delivery business. At present there are embargoes at Ohio river crossings against various commodities from the South, and the car shortage is such that hardly anyone is now getting a full supply of equipment. Inch lumber is not so good as had been expected in hardly any wood, but all thick stocks are good, oak, elm, gum,

ash, poplar, maple, hickory and cottonwood all being in fair demand. Low-grade cottonwood, gum, poplar, etc., is selling freely to box manufacturers, who are doing capacity business.

The labor shortage is the greatest handicap the lumber industry is facing just now, and some of the southern mills expect to close down shortly, and probably stay down until the completion of the harvesting season. Men are badly needed in the fields, and the planters are willing to pay very high wages. This has resulted in a considerable decrease in the cutting and marketing of logs by small holders, while the real forest operations have been held down by short woods crews. In Louisville as in other large southern cities the mills are able to get a fair percentage of high priced labor, but in the country districts the situation is serious. The chief demand for hardwoods at present is coming from direct or indirect government orders, but it is beginning to look as though there may shortly be an improvement in the building and furniture trades. There is also an active demand from musical instrument manufacturers, who have been especially good buyers of mahogany, walnut and other dimension stock, and veneers.

← MILWAUKEE →

Logging operations are getting under full headway in northern Wisconsin and while there still exists a serious shortage of woodsmen, logging and lumber companies for the most part have filled their requirements fairly well. As a rule, however, most operators are running less than their full number of camps, due not only to the lack of men, but to the difficulty of getting sufficient supplies. If conditions surrounding labor, foodstuffs, materials, equipment, etc., were more favorable, it is likely that the cut during the coming winter would be the largest in several years, as the demand for lumber continues at a high mark and everything that can be produced during the coming years undoubtedly will find a ready market at good prices.

Those who were under the impression that lumber prices would see a gradual decline have been disappointed. Lists have continued to stiffen and probably will continue to do so. It is said by authorities that were the war to end at once, it would be hardly reasonable to expect a downward movement of prices, as the needs of this country alone are sufficient to keep all mills running at capacity for a long time.

A cause of worry to loggers and mill operators as well, is the high wages demanded by all classes of labor. The wage scale has been going upward by leaps and bounds and sooner or later must be reflected in lumber prices. This is only another reason why much confidence is being expressed in the ability of the lumber market to hold its own for an indefinite period.

NORTHERN MANUFACTURERS**Ahnapee Veneer & Seating Co.**

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers
of all native northern woods and deliver stock that is in
shape to glue.

From our Algoma factory, where we have specialized for
twenty years, we produce panels of all sizes, flat or bent to
shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut
quartered oak. Our quartered oak panels are all from sawed
veneer.

Every pound of glue we use is guaranteed hide stock. We
do not use retainers. Our gluing forms are put under pow-
erful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on
results accomplished by most painstaking attention and study
of every detail, combined with the use of the best stock and
an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

We Offer for Prompt Shipment

FOSTER BROS., Tomahawk, Wis.

WISCONSIN AND MICHIGAN HARDWOODS

THESE two inexpensive tools will produce Saw Teeth that will increase your cut and decrease your cost of manufacture. They insure maximum cutting efficiency from each individual tooth.

The Atkins Ideal Swage

One pull of the lever and your Saw Teeth are exactly swaged. Note the perfect shape—the heavy shoulder—the broad cutting edge and the uniformity of every tooth.

The Pribnow Shaper

Then next comes the Pribnow Shaper. See the reinforced cutting edge. See how we have built up the point surfaces of the tooth. This insures long wear and prevents chipping and breaking off of the keen cutting parts.

Then a round on the automatic and the work is done.

The whole outfit will pay for itself in the ordinary mill in a few days, by making more and better lumber at less cost. It makes no difference what tools you are now using, the above combination will make money for you. Both tools made for all sizes of band, circular and gang saws.

Write for our book "H. R." 218 pages of information about Saws for all purposes, Saw Fitting Tools and Machine Knives. A complete telegraphic code and tables of instruction for speed of Circular Saws, rules for calculating same, table of comparative gauges and a world of valuable information.

"NOTHING BETTER"

A Specialty - Not a Side Line

North Tonawanda, N. Y., Mar. 29, 1917.

Gentlemen: The resaw we purchased from you last year is giving good service. It is the second resaw of your make that we have installed. This in itself is a good recommendation. We will say further that should we need another saw, we do not know where we could find a better one.

Yours truly,

DOCK & MILL COMPANY.

Wm. B. Mershon & Co., Saginaw, Mich.

Michigan Hardwoods *Cadillac Quality*

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

DIMENSION STOCK Mahogany and Walnut

Aside from our production of lumber and veneers—We are manufacturing kiln-dried mahogany and walnut dimension stock at the rate of 2,000,000 feet annually, and this department has been steadily growing since 1902. We think that these simple facts make detailed argument unnecessary—as to our prices, quality of our stock, and promptness of service.

However, we have ready for mailing a circular which explains in detail how and why you can save time, money and trouble—through our dimension stock.

But if you don't care for the circular, and if you realize what an expensive luxury your waste pile is, send us your cutting bills, as you would give them to your stock-cutters. We will quote a specific price for each style you manufacture.

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Output of Boxes by States

SOME STATES produce many more boxes than their people use, other states must import boxes to supplement their own factories. Usually the regions which have many factories and little timber, must bring boxes from elsewhere. Illinois is a typical example of a region of that kind. Its packers and manufacturers require nearly 400,000,000 feet of box lumber a year and not one-tenth of it comes from timber grown in the state. Consequently, Illinois is an excellent market for the box material produced in the region of which Memphis is the commercial metropolis. The distance is not great and the freight rates are reasonable.

The box makers of Illinois use little short of 100,000,000 feet of gum and cottonwood yearly, and nearly all of it comes from the district tributary to Memphis. Other kinds of box lumber find their way into Illinois from that region. But the shipment of rough lumber to distant box factories is not all that takes place. Vast quantities of shooks, ready to nail together, are made by mills near where the timber grows, and these are sent to the markets that demand them.

Illinois is cited only as an example of a market that buys heavily from the outside. The following table quotes statistics of box and shook manufacture in certain states tributary to Memphis, either in the capacity of producers or consumers of box lumber. The figures give the annual shook production in board feet, rough lumber:

	Feet
ILLINOIS	372,000,000
OHIO	153,417,000
MISSOURI	111,664,000

SERVICE

M-D Mason-Donaldson Service is a **M-D** concrete reality. It is based on three things, viz.: Sufficient experience and study so that we know what you **really** want; the belief that it is merely **good business** to give what you **want**, not what we wish you wanted; the ability to stick to that policy.

This service covers all northern hardwood needs, maple and birch, flooring, pine and hemlock. Mixed car orders are our delight. In the hardwood items the following **specials** would give you a good chance of seeing just how close to the facts our statements come.

75,000' 4/4" No. 1 Com. Basswood	50,000' 5/4" No. 1 & No. 2 Common Hard Maple

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Review and Outlook

General Market Conditions

GRANTING THAT THE NECESSITY for finding markets is occupying a fair share of hardwood operators' thoughts, nevertheless the big thing today is production. Labor difficulties are mounting day by day. Not only is labor demanding, and possibly with some justice, steadily increasing wages, but (and this is the more serious consideration) its supply is increasingly unsteady and its quality growing steadily inferior.

Gatherings of lumbermen of late have taken serious cognizance of the growing menace from labor, but as a whole the trade seems to continue more or less up in the air as to what the remedy or remedies may be. In the last analysis it will undoubtedly be found, as the importance of adequate lumber production as a factor in the prosecution of the war is more generally understood, that the assistance of the government in maintaining more adequate labor facilities may be looked forward to.

As the situation now stands, however, the wages which labor is commanding, its decreasing efficiency and material addition to the cost of manufacture due to uncertainty of supply—thereby increasing the proportion of overhead—are definite insurance against lessening values in hardwood lumber. Mounting costs have had the further effect of awakening the lumber trade as it never before was awakened to the necessity for accurate cost records, and lumber going on the market today is priced with much more regard to the actual cost of turning it out than it ever has been. This modernizing of methods will be a permanent feature of lumber production in the future—probably even more than it is today.

On the other side of the fence, that is, the merchandising or marketing of sawmill products, the same conditions are in control of the situation which have been for the past few weeks. From the marketing angle the most serious consideration at present is probable government action curtailing production and embargoing shipments of items, on the now famous list of 500 so-called unnecessary articles. The possibility of closing down on the manufacture of these items is of course giving great concern to those whose business it is to make them, and it is only natural that with such an uncertain prospect, the outlay for raw material should be kept at a minimum. As one instance, the pleasure automobile using as it does hundreds of thousands of freight cars every year, will probably be one of the first to feel government regulations. There are already reports of cancellation of orders for lumber going into pleasure car construction, and automobile dealers everywhere are reporting the practical impossibility of getting deliveries on new cars. The automobile business is one of the first to feel the pinch of government action because of the immense bulk of freight room

used. Other industries in proportion to pleasure car manufacture are not so vitally important individually, but the government will without question limit the production of many articles in which hardwood lumber plays an important part. This seems to be an assured fact and this probability seems to have been realized by the lumber trade.

The threatened curtailment and embargo have been the feature developments of the past couple of weeks, but aside from this the situation has maintained a more or less steady progress, marked mainly by development of the movement looking to the more general turning over of industry to war purposes. It is but natural that the lumber trade should be considering as its principal objective the possibility of best meeting the country's needs in this its greatest crisis.

Make Good on Your Resolutions

IT IS A VERY SIMPLE MATTER for the president of an association in convention to appoint a committee on resolutions, and it is equally easy for that committee to compile a flowery message of support—usually the abstract or general meaning of the word is embodied. It is easy for an association assembled in convention to unanimously adopt such a resolution and sad to say, the convention delegates usually find no difficulty whatever in immediately forgetting the spirit which it was intended the resolution should inspire.

A resolution adopted by a representative convention of business men giving flowery assurance of unwavering support to the government and the country is meaningless and a waste of valuable time unless in voting for its adoption each member feels the inspiration of real loyalty that should make his vote a personal pledge and a lasting obligation rather than the merely automatic function of parliamentary law. In other words, the resolution should stand for a concrete something; for a resolve to make a sincere effort in every case to meet the requirements for government service and government supplies.

Illustrating the usual absence of the connecting link between the resolution and ultimate action, a group of southern operators was asked to submit bids on specifications for a few unusually large oak timbers. Such a timber could be gotten out of an occasional tree, but because the dimensions were so unusually large as to be almost ridiculous from the standpoint of normal demand, the request was treated more or less as a joke and as a result that body of men went directly against a resolution of loyalty and support which it had adopted five minutes before.

The government specifications as they finally stand have in the

main been prepared to do it. I know what is required. The government would not ask for such specifications if they were not needed. Practical lumbermen at Washington are every day, through revision, bringing government specifications closer and closer to practical operating possibilities, but in the meantime the trade must realize that its obligation is to make an honest effort to meet government calls and to charge prices made not at random and grossly inflated because specifications are unusual, but rather based on a fair analysis of actual increased cost of getting out the unusual orders which the war work requires.

When the individual lumbermen and the associations collectively reach the point where the spirit of patriotic resolutions actuates them in their operations, then these resolutions will have a purpose. Until then they are mere empty expressions and are worse than useless.

Will the Sherman Law Die?

IT IS NOT IMPROBABLE that the war will kill and bury the Sherman law; for all practical purposes it seems to be about the same as dead already. It had its origin in a time when there was a superabundance of hysteria and fright, lest business men might form combinations that would restrain trade. During that time associations were afraid to talk about prices for fear of prosecution by anti-trust laws. Anything that looked like team work was taboo.

The letter of the Sherman law is still on the books, but the spirit has flown away. The courts, politicians and people are not so easily frightened at teamwork and combinations as formerly. The war has brought the change about. The conflict is being carried on and it will be won by teamwork and close and extensive combinations. The question will naturally be asked, why combinations are so valuable in war and so dangerous in business.

It is fairly certain that the Sherman law, which forbade certain combinations and mutual understandings among men engaged in the same line of business, will be repealed, and that in its place laws will be placed on the books permitting many kinds of combinations for the betterment of business. The days of abstract theories in such matters are drawing to a close and the time for common sense has come. The preachers of conservation have been abroad in the land, and one of the truths which they have drummed into the public consciousness is that it is poor conservation for one man to knife another and hinder him from succeeding. It is better to stand together, one helping another instead of hindering. The Webb bill was the first step in that direction. It meant to legalize combinations to promote foreign trade. Other steps will follow and they may be expected to encourage combinations for the promotion of domestic trade. If combinations are good for foreign business, they should serve equally well for home business, and it should not be difficult to provide adequate safeguards to protect everything that needs protection. The war will be blamed or blessed for many changes, and indications are that not the least of these will be the attitude of the country toward the restrictive features of the Sherman law.

Earnest Call for Lumbermen

WHEN THE TWENTIETH ENGINEERS has been fully recruited it will be the largest regiment in the world and will contain 17,000 men. It will be made up very largely of experienced lumbermen, and so important is the work which awaits it in France that the War Department is willing to transfer practical lumbermen from other regiments to this one in order to fill it quickly. Its work will consist in providing lumber for the fronts in Europe. The problem of furnishing enough lumber for the trenches, roads, and bridges in the fighting zones is one of the most difficult that the War Department has to face. Though plenty of lumber is available in the United States, ship room is so valuable that it is more economical to send lumbermen across the sea and cut the lumber on the other side. The search for suitable men continues, and lumber operators in the United States whose employees are in the army have been asked to assist the government in locating such of these soldiers as are experienced lumbermen in order that they may be transferred to the regiment that provides the lumber on the other

side. The importance of the log cutter and sawmill man is appreciated in this instance as perhaps never before.

Money for the War

IT WOULD BE NATURAL if some one were to ask by what process the United States can borrow money to finance the war, when the amount needed will probably exceed all the cash in the country, if all, down to the last copper cent, were gathered together.

The total amount of cash in the United States, including gold, silver, and paper, is about \$6,000,000,000. On the face of the figures, it appears strange that the people have \$21,000,000,000 on deposit in the banks—fifteen billion more than all the money in the country.

Congress has authorized the government to spend \$7,000,000,000 in prosecuting the war. Some of this will be raised by borrowing and some by taxation. Again the question comes up: Where will the seven billion come from when the country has only six billion?

The methods of financing are various and sometimes peculiar and might be compared to the problem of "squeezing blood out of a turnip"—where there is no blood. Before coming to the conclusion that it is impossible, it might be well to look at what some of the countries now at war have done in the way of raising money for loans. Take the case of Germany for an example. The total sum of money in Germany when the war began, or shortly before, was \$2,787,100,000, including gold, silver, and paper. Germany has spent about \$20,000,000,000 in carrying on the war, approximately seven times as much money as the whole empire contains. It has raised it by loans and taxes; but how? Where does the money come from?

When a loan is floated there, the people turn in most of the cash they have and take government bonds. The government quickly spends that money for supplies and soldiers' pay, and it goes right back to the people. Little of it passes out of the country. Then another loan is floated, and the government gets the same money back, and again pays it out in the same way. It thus goes round a circle, and again goes round, and keeps going round, and there is no telling how much longer it may continue to go round. Apparently, the same money has been spent six or seven times over by the German government, and it owes \$20,000,000,000 to its own people.

If our government follows the same plan to some extent, the consolation is that it has more money than Germany to begin with, and will not need to go round the circle so often. Our government will buy at home and the money will stay here, and while in rapid circulation, it will be plentiful, and an abundance of money in circulation always makes business good.

Housing for Mill Hands

MANUFACTURERS are giving more attention to such questions as proper housing for their help. This is proper, for the best work is done by satisfied and contented employees, and proper living arrangements are necessary to contentment.

Lumber mill towns have been looked on in some cases as merely temporary establishments, and for this reason comparatively little attention has been paid to housing. But in most cases the community established by lumber manufacturing is permanent, developing its own reason for existence and remaining after the lumber operation has been completed.

Consequently there is good reason why housing should be looked on as a permanent problem, and why some attention should be paid to giving mill hands living quarters which will make them satisfied with their jobs.

If agricultural products continue high throughout this year, the farmers of the country will be able to set up some loan banks of their own instead of needing the aid of the government loan banks.

The band rip saw is a persistent candidate for attention in the wood-working institution, basing its claim to recognition upon the saving in kerf it is able to effect.

The 15 Per Cent Rate Hearing

Lumber interests of the United States were represented pretty thoroughly at the hearings and arguments in the 15 per cent rate advance case before the Interstate Commerce Commission at Washington recently. J. V. Norman and E. A. Haid appeared as counsel for the Southern Hardwood Traffic Association, which presented the first witness for the lumber trade in the person of J. H. Townshend of Memphis.

Mr. Norman participated in the examination of President Rae of the Pennsylvania Company and other witnesses for the railroads. He asked Mr. Rae whether the railroads should be given higher rates on account in part of the higher war taxes they have to pay, when other people or industries do not receive more money on account of taxes, being obliged to economize in order to meet the taxes. Mr. Rae replied that the railroads ought to receive fair rates.

Mr. Townshend in his testimony took the broad ground that the lumbermen are patriotic and willing to bear their share of increased transportation charges if the commission deems it necessary, but he argued that any increase allowed should not be on a percentage basis, as that would disturb existing rate adjustments and commercial competition, and if there is an increase it should be limited to the war.

Mr. Townshend presented statements showing how the hardwood shippers analyze the rate situation. In explanation of his tables he testified in part as follows:

To Buffalo, N. Y., Pine Bluff now pays \$42.64 more than Wausau; with the proposed advance Pine Bluff will pay \$47.32 more.

To South Bend, Ind., Pine Bluff shipments by the car now pay \$47.84 more than Wausau, and will pay \$52 under the advance of 15 per cent. Holly Ridge, La., now paying \$63.44 per car more than Wausau, would pay \$67.60.

To Toledo, Moorhead now pays \$42.12 more than Wausau, but would pay \$46.28 if a 15 per cent increase was granted. Pine Bluff now pays \$38.64 to Toledo and would pay \$48.88. Holly Ridge, now \$58.24, will pay \$64.48 in excess of Wausau.

To Chicago, Moorhead now pays \$65 and would pay \$72.80 under the 15 per cent increase proposition. Pine Bluff now pays \$70.20 and would pay \$78. Holly Ridge, now paying \$85.80, will pay \$93.60 more than Wausau.

The present relationship between Ohio and Mississippi river crossings to points in Central Freight Association and Eastern Trunk Line territories, has been in existence for a great number of years. Business has been adjusted to these conditions and to make the uniform advance of 15 per cent from each and every crossing will, owing to the variance of rates from these crossings, result in a disruption of the present spread as between the crossings. This disruption ranges up to 1½ cents.

Take, for example, the rate to Peoria. The advance from St. Louis is 1 cent, from Cairo and Evansville 1½ cents, Louisville and Cincinnati 1.9 cents. The present spread between St. Louis and Cairo is 2 cents. Under the proposed rate this spread will then be increased to 2½ cents. This same condition is also true of Evansville. The present spread between St. Louis and Louisville is 5.1 cents. Under the proposed advance this spread will be increased to 6 cents or .9 of a cent in favor of St. Louis. The same increase in the spread between St. Louis and Cincinnati of .9 of a cent is also true.

Taking Buffalo, N. Y., as another example, one notes that the rate from St. Louis under the present adjustment is 18.4 cents; the proposed rate is 21 cents, an advance of 2.6 cents. The present rate from Cincinnati to Buffalo is 10½ cents and the proposed rate 12 cents, an advance of 1½ cents. The present spread between St. Louis and Cincinnati is 7.9 cents. Under the proposed rate advance this spread is increased to 9 cents or 1.1 cents greater than now in effect.

The above cited cases are typical and reflect the disruption of the present adjustment considering one crossing inter-related with the other. Taking the adjustment to the Eastern Trunk Line base points, at the present time the rates to Philadelphia are made an arbitrary of 2 cents under the present rate to New York; Baltimore is 3 cents under the rates to New York and Boston is 2 cents over the New York rate. The result of a horizontal 15 per cent advance will be the absolute disruption of the adjustment.

The spread between St. Louis and Cincinnati to eastern trunk line points is in each and every instance increased by 1 cent in favor of Cincinnati. The present spread between Cairo and Cincinnati is increased in amounts ranging from .8 of a cent to 1.4 cents. The present spread between St. Louis and Cairo is disrupted, as would be the present spread respectively between Cairo and Evansville, between Louisville and Evansville, and between Louisville and Cincinnati.

So, in the 15 per cent case it will be found that in no instance does the advance to the lumbermen's interests result in a gain. The extent of the disruption of the present adjustment can be easily ascertained from the statements submitted to the commission by a mere subtraction of the measure of advances from one crossing compared with another.

To thirteen of the nineteen points shown in my table the spread between Cairo and St. Louis rates is increased ½ cent in favor of St. Louis. To 17 of the 19 points Cincinnati gets the lowest advance of all the crossings. To 6 of the points Louisville gets the lowest advance. To 13 of the points Cairo gets the greatest advance and in no case does it get the least advance. To 3 of the destinations shown St. Louis gets the least advance and to 6 it gets the greatest. To 4 of the points where the Cairo advance is not the greatest, the Cairo advance is only 1/10 of a cent less than from the point which takes the greatest advance.

The position of other representatives of the lumber interests at the hearings and arguments were similar to those of Mr. Townshend. They protested that lumber is doing well for the railroads, now, while substitutes and other bulky freight pay lower rates. They pleaded, however, that any rate increase should not be by percentages and thought that it ought to be limited to the war.

Gen. L. C. Boyle, counsel for the National Lumber Manufacturers' Association, urged that the economic aspects of the situation be carefully considered by the commission before it disturbs existing relationships. A. G. T. Moore, assistant secretary of the Southern Pine Association, declared that the commission should not upset existing parities between competing lumber-producing sections and lumber consuming markets.

W. E. Gardiner of the Georgia-Florida Sawmill Association, testified in opposition to a percentage rate increase. George L. Forester of the Western Carolina Lumber & Timber Association, which is said to be largely hardwood men, read a statement showing the stand of the association on the question before the commission.

The lumbermen's testimony was taken by Examiner Disque of the commission's staff. The opening testimony of the railroads was presented before the full commission. After the testimony for separate industries was all in the full commission met again for rebuttal testimony by the carriers and cross-examination by the shippers; also to hear general statements by F. A. Vanderlip, head of the war savings certificate division of the treasury department, and Paul M. Warburg, vice chairman of the federal reserve board, who advocated rate increases as necessary at this time.

The commission also sat as a body while Clifford Thorne, chief witness and counsel for shippers' interests generally, presented a mass of material in opposition to the proposed rate increase, and finally during oral arguments in the case, which were postponed for one day in order to give the shipping interests more time.

The commission has set December 17 for hearing an application of western railroads for a general rate increase, and southern roads are also in on the demand for higher rates.

The commission has consolidated a number of fifteen section applications of the railroads for increases in rates on commodities, including boxboard, wood rollers, vehicle parts, lumber and forest products, with investigation and suspension docket 1125, which is being considered in connection with the 15 per cent rate advance case.

One of these is the application of the Boston & Maine Railroad to increase rates on lumber and forest products from points on the Boston & Maine and St. Johnsbury & Lake Champlain Railroad to points on the Central New England Ry., the New Haven R. R., Rhode Island Company and other lines.

Other applications received by the commission under the amended fifteenth section include the following:

C. C. McCain, Agent—Lighterage of lumber and forest products in New York harbor.

R. H. Countiss, Agent—Nonapplication of lumber and other forest products rates from north Pacific coast points to stations between Duluth and St. Paul via Canadian Northern Ry. and Duluth, Winnipeg & Pacific Ry., through Duluth.

Central R. R. of New Jersey. Wooden patterns between Brooklyn and New York stations and adjacent territory and Bethlehem and South Bethlehem, Pa., Phillipsburg, N. J., and other stations.

E. B. Boyd, Agent. Sash, doors and blinds from St. Paul, Council Bluffs, La., and various points to Illinois, Iowa and other stations.

L. E. Chabener, Agent. Cancellation of through commodity rates on lumber from Southern Ry. Memphis division stations to Chicago and Milwaukee.

L. E. Chabener, Agent. Cottonwood, cypress and gum lumber from East St. Louis, Ill., to Alton, Ill., and points taking the same rates in section 2 of I. C. C. A 95.

L. E. Chabener, Agent. Lumber and articles taking lumber rates from Charleston, S. C., to Jacksonville, Eastport and Fernandina, Fla.; from Eastport and Jacksonville to Charleston, S. C., and from Eastport and Jacksonville to Beaufort and Port Royal, S. C.

M. P. Washburn, Agent. Lumber from Mississippi Valley territory points to stations on the C. & O. R. R.

Missouri Pacific Ry. Lumber and forest products from points in Arkansas, Louisiana, Mississippi, Missouri, Oklahoma and Texas to points in C. F. A. territory, Wisconsin and Ontario.

Lumber and log rates from the southwest to Paducah, Ky., are to be introduced under a recent decision by the supreme court

in the case of St. Louis Southwestern Ry. against the Interstate Commerce Commission and the United States government. The decision affirmed the judgment of the lower federal courts and of the Interstate Commerce Commission in the Paducah lumber rate case, which was briefly to the effect that the 22 cent rate to Paducah was unreasonable and should not exceed 15 cents, the rate to Cairo from the southwestern blanket territory, and that the railroads should put into effect an alternative through route with joint rates from the southwest to Paducah via Memphis.

The Cotton Belt and Iron Mountain carried their fight against the commission's finding into the federal courts, but did not get very far with it. They argued that the commission has exceeded its power; that their constitutional rights had been invaded, and many other fine points, most of which the supreme court dismissed with scant consideration. The court held that the commission had the power to do what it did do and that the carriers could not obtain an injunction against enforcement of the commission's order.

Situation in Memphis Territory

According to officials of the Southern Hardwood Traffic Association, Memphis, there is no improvement in the car situation, either with respect to inbound movement of logs or outbound movement of lumber. On the contrary, they state that the scarcity is becoming rather more pronounced and that it is becoming increasingly difficult to secure cars for handling either logs or lumber. It is estimated that, in the matter of outbound shipments, lumber interests are not securing fifty per cent of their requirements, taking the Memphis and valley territories as a whole, while in some localities manufacturers are having to content themselves with as little as twenty-five per cent. Mills at Memphis are, in some instances, already closed down because they cannot secure enough cars for handling logs while others are threatened with forced suspension in the immediate future if there is not a radical increase in the number of cars and therefore in the number of logs available.

Hardwood production is therefore substantially smaller than it was a month ago and indications are that there will be a still further reduction in the output. The car shortage is the greatest handicap the manufacturers are experiencing but they are also suffering to an appreciable extent from the shortage of labor and the high cost of the latter resulting from this scarcity. Members of the open competition plan of the Hardwood Manufacturers' Association, during their meeting here recently, laid particular emphasis on two facts: 1—That hardwood production is already sharply below normal because of the car shortage, and 2, that it promises to become much smaller if there is not a change for the better in the number of cars available and in the quantity of labor to be had. Memphis lumbermen generally are inclined to share this view.

The transportation problem is rapidly resolving itself into a question, so far as lumber itself is concerned, of "who is the buyer and for what purpose it is intended." The government is seeing to it that cars are promptly furnished by the carriers for all lumber that is going to be used, either directly or indirectly, by the government in the winning of the war. And those who are selling to the government are finding their transportation troubles disappearing very quickly. Those who are catering to private industries, however, are meeting with increasing difficulty in securing cars and are absolutely at the mercy of the railroad war board and the railroads themselves. They are getting some equipment but they are having a hard time of it. Priority order No. 2 was a serious blow to certain classes of lumber, notably high grade gum and oak, used in furniture manufacture. Gondola cars can not be used for its shipment and there are very few box cars available.

Recent developments disclose much more effective co-operation between the lumbermen of this territory and the government than heretofore. The enlargement of the Southern Hardwood Emergency Bureau and the mobilizing of the hardwood industry of the country through that body have brought about much more satisfactory results all around and have forced realization of the fact that non-essentials must be eliminated. Lumbermen are beginning to appreciate the fact that the government is determined to win the war and to put forth every energy possible to this end. They are also beginning to appreciate the fact that they can help, and help a great deal, in this patriotic work by aiding the government in securing its supplies in the way of hardwood lumber and timbers. And they are also more appreciative now, than ever before, of the fact that, in helping the government, they are helping themselves, since the government sees that they get all the cars needed for filling its orders.

There is also some prospect that the government will undertake to insure larger hardwood production by requiring the railroads to furnish more flat cars to the manufacturers of lumber who are working on government orders. The lumber or timbers cannot be shipped before being manufactured and the providing of cars for handling logs for the mills is just as essential as providing cars for handling the products of these logs. Indeed, in the last analysis, log cars should come first, in the opinion of members of the trade here, and cars for handling the products of these logs should come second.

One of the largest manufacturers of lumber in this part of the country today said that he issued instructions to the sawyer at his plant to cut only specified lengths, widths and thicknesses until further notice. He said his aim was to produce nothing that could not be used by the government in shipbuilding or other departments of its activities, and there are other Memphis lumbermen now who are tackling the proposition from very much the same angle.

As we learn to utilize more and more of the tree to advantage, it looks like the gasoline engine is the logical thing to replace the wood burner as a driving engine for the portable sawmill.

Many splendid ideas are advanced by enthusiasts at the trade conventions, but one trouble is in that most every advocate of an idea thinks that his own particular hobby is pretty near the whole works, while most all of them are merely parts of the complex problem of business and industry. What we need is more co-ordination of parts, more teamwork and less starrng of individual ideas.

Occurrences at Washington Interesting to Lumbermen

Procuring Wood for the Government and Organizations Which Will Do the Work

Orders Follow Reorganization

The reorganization of the Southern Hardwood Emergency Bureau has been followed by receipt of orders. Besides the 700,000 feet of oak ordered from it not long ago for export to France for military purposes, the bureau recently received an order from the French High Commission for 10,000 pieces of oak tongues for artillery. It is for pieces $4\frac{1}{2}$ by $4\frac{1}{2}$ inches and 11 feet 6 inches long, and will require about 200,000 feet.

The hardwood bureau is now in touch with all purchasing branches of the government and it is expected to receive additional orders on a considerable scale. Already F. K. Paxton, lumber purchasing agent for the Emergency Fleet Corporation, who is reported to have clashed with the bureau some time ago, has been in conference with its representatives, and they expect that there will be orders distributed for a quantity of hardwood ties and other material for ship building yards and perhaps for other purposes.

W. E. DeLaney of Lexington, Ky., former member of the old lumber committee, is present daily at the offices of the emergency bureau.

Further opportunities for hardwood lumbermen are seen in the proposal discussed at the recent 15 per cent rate advance hearings that 100,000 freight cars should be built by the government with a view to relieving the freight congestion prevailing in the country. President Rea of the Pennsylvania railroad advocated that this be done if the lumber and other materials can be obtained at government prices. Interstate Commerce Commissioner McChord suggested that the government might lend the railroads money to provide the cars.

It is reported that after the 22,000 airplanes now said to be under contract are completed, it is planned to authorize the construction of 75,000 more airplanes.

Purchases of Lumber

The Navy Department Bureau of Supplies and Accounts has awarded contracts recently for a large number of lots of hardwood and other lumber for various purposes. Much of this material, it is said, is bringing high prices from Uncle Sam. Most of the lumber is for stocks at the navy yards, naval stations and other branches of the naval establishment. The navy contracts awarded include the following hardwoods:

Green domestic, white oak—1,275,000 feet to John B. Yates Lumber Co., Pennboro, Va., \$84,725.

Mahogany—45,000 feet to the Palmer & Parker Company, \$10,860; 6,300 feet to White Bros., \$1,571; 7,500 feet to same, \$1,908.

Maple—8,000 feet to T. J. Shryock & Co., Washington, D. C., \$829; 15,000 feet to Louisville Point Lumber Company, \$1,096; 3,000 feet to Wyatt-Prock Company, \$234; 5,000 feet to Elias & Bro., Buffalo, \$545.

Poplar—8,000 feet to Burgess Bros. Company, \$544; 113,000 feet to James & Abbott Company, Boston, \$7,786; 10,000 feet to Louisville Point Lumber Company, \$905.

Black walnut—3,000 feet to Staley Lumber Company, Liberty, N. C., \$450.

Hickory—2,000 feet to White Bros., \$335; 1,500 feet to Elias & Bro., \$187.

Lignum-vitae—140,000 pounds to J. H. Monteith, New York, \$9,137; 5,000 pounds to White Bros., \$222.

Ash—5,000 feet to White Bros., San Francisco, \$845; 16,000 feet to Burgess Bros. Company, Brooklyn, \$1,440; 72,000 feet to Riel-Kadel Lumber Company, Memphis, \$7,464; 82,000 feet to same, \$8,787; 29,000 feet to Wyatt-Prock Lumber Company, Philadelphia, \$2,688; 15,000 feet to Riel-Kadel Lumber Company, \$1,440; 6,000 feet to Palmer & Parker Company, Charlestown, Mass., \$492; 16,000 feet to Wyatt-Prock Lumber Company, \$1,264; 30,000 feet to Riel-Kadel Lumber Company, \$2,730; 90,000 feet to Dudley Lumber Company, Memphis, \$7,799; 144,000 feet to same, \$12,528; 90,000 feet to same \$7,697; 210,000 feet to same, \$18,360; 63,000 feet to J. E. Stark & Company, Memphis, \$4,745; 38,000 feet to same, \$2,939.

Agents for the government are reported to have placed orders in Vermont and the Berkshire region of Massachusetts for a large quantity of maple chunks and lumber for use in building roads and as "staples for pile drivers" at the Hogg Island ship yard, the

material to be delivered in a succession of carloads over a period of two or more years.

Wooden Ships

Joseph O'Neil of the Henry O'Neil Lumber Company, St. Louis, has been appointed to act as secretary of the office of the director of lumber under the Council of National Defense. He says that the director of lumber wants price lists and stock sheets of hardwood and other lumber manufacturers and associations, so that he can supply without delay information requested by officials of the United States Government and purchasing officers representing the allies. These officers submit requisitions for special hardwood stock and other lumber material on which they want immediate action.

Another big grist of contracts for hardwood and other lumber has recently been awarded by the Navy Department. The contracts were made with the advice of W. M. Morford, the Nashville lumberman, who is serving as an expert adviser on lumber to Admiral McGowan, paymaster general of the navy, who, by the way, is reported as not unlikely to be deprived of much of his power in the near future by the navy entering into the agreement to purchase war materials and supplies for the United States and the allies through the joint purchasing commission of the war industries board, Council of National Defense.

Oak, plain, FAS 56,000 feet, to Wyatt-Prock Lumber Company, Philadelphia, \$4,560; 200 white oak piles, to same, \$4,160.

Plank, 34,000 feet, to Charles E. Lane Company, Parkersburg, W. Va., \$3,060.

Ten thousand feet butts, domestic, ditch sawed, to Wyatt-Prock company, \$620.

Shaft logs, 21,000 feet, to W. M. Ritter Lumber Company, Columbus, O., \$1,260.

Plank for boat building, 57,000 feet, to the Lane company, \$5,280.

An order for 1,210,000 feet plank was divided among several navy yards, the Lane company getting allotments for Norfolk at \$122,745, Boston at \$5,700 and Puget Sound at \$7,150; and the Woodstock Lumber Company of Boston getting a contract for \$1,747 to be delivered at the Charleston, S. C., navy yard.

White or red oak for bending contracts were awarded as follows: 82,000 feet to Wyatt-Prock company for \$5,392; 60,000 feet to same for \$5,500; 90,000 feet to Charles E. Lane Company for \$8,550; 42,000 feet to the Bliss-Cook Oak Company, Blissville, Ark., for \$3,560; and 25,000 feet to James E. Stark & Co., Memphis, for \$1,750.

No. 1 white oak timber, 59,000 feet to Lane company for \$4,366; 50,000 feet to the Export & Domestic Hardwood Company, New York, for \$4,565; 130,000 feet to J. Natwick, Baltimore, for \$6,260; 15,000 feet to the Export & Domestic company for \$825.

Domestic, FAS, quarter-sawed, 15,000 feet to North Vernon Lumber Company, North Vernon, Ind., for \$1,397; 30,000 feet to Wyatt-Prock company for \$2,930; 15,000 feet to McEwen Lumber Company, Azalia, N. C., for \$1,444; 22,500 feet to James E. Stark & Co., Memphis, for \$1,947, and 15,000 feet more to the same concern at \$1,285.

White oak, FAS, shipping or air dry, 6 inches and wider, average 9 inches by 8 to 16 feet long, 32,000 feet to Staley Lumber Co., Liberty, N. C., for \$2,144; 30,000 feet to Wyatt-Prock Lumber Company for \$2,190; 690,000 feet to Charles E. Lane Company for \$53,910; 10,000 feet to Staley Lumber Company for \$600; 52,000 feet to Ferd Brenner Lumber Company, Alexandria, La., for \$3,623; and 15,000 feet to same for \$1,005.

Four thousand feet white ash, firsts, to Mowbray & Robinson Company, Cincinnati, for \$600; 88,000 feet to the same concern for \$11,950.

Box material—70,000 feet of No. 1 box boards, poplar, spruce and white cedar, were awarded to James & Abbott Company, Boston, for \$2,093.

Recently signed contracts for merchant ships for the government account for a total of 550 steel ships and 450 wooden and composite ships contracted for for war mercantile purposes. The first steel ship is to be completed at Seattle November 24 at the plant of Skinner & Eddy, operated by an old lumberman, D. E. Skinner, and the first wooden ship built for the government since the war began is due to be launched about December 1.

That the government should place soldiers at every sawmill to protect the mill properties and keep agitators out is the suggestion made recently by J. T. Gregory of Tacoma, member of the old lumber committee.

The last requisition order for lumber by the shipping board is

broader than the lumbermen at first contemplated, if the view of J. H. Haynen, lumber purchasing agent for the board, prevails. The order placed an embargo on the shipment, except for the board, of material having a face of 10 inches or more and lumber more than 2 inches thick, any length. Mr. Haynen is reported to have decided that this operates to shut off private shipments of anything more than 2 inches thick, of any width whatever. Lumbermen have laid the question before the priorities committee.

It is reported that wooden shipbuilding is to be dropped by this government after the completion of the 300 or 400 vessels of this type now under construction. This is an official decision by the shipping board, it is reported, but unofficially announced. While hardwood ship material for the shipping board has been ordered and is said to be delivered satisfactorily, government officials charge that there has been too much delay in delivery of softwood materials, especially yellow pine.

Some time ago a Mr. Eichberg, representing certain lumber interests, was here agitating the proposition to substitute oak for pine in certain big ship timbers, as he claimed the oak pieces could be gotten out readily by gangs of hewers. After consultation with the shipping board officials, however, it was determined that such substitution should not be generally made. Technical questions of the relative weight of oak and pine, and other matters are involved in the proposition.

However, it is reported that the substitution of oak for pine in thirty or more items of the ship schedule being followed on contracts for a small group of wooden ships under construction in Florida, has been allowed by the shipping board authorities, presumably for good reasons. Further substitution now appears to be permitted under the new schedule.

The fact that many of the large timbers are needed at the very beginning of the construction of a wooden ship makes delays unfortunate, as work cannot go ahead on the rest of the vessel naturally until the peel, flitches and ribs are put together.

The most recent specifications point out to what extent hardwoods may be substituted for pine and fir and sizes are shown for various items.

Demand for Various Articles

Expansion of government activities in many lines incident to the war has caused a big demand for various articles of hardwood. Furniture is being bought in large quantities by the various government departments. An example is a recent order for \$68,000 worth of furniture for the War Department offices here, and that is by no means all even for that one department. Field desks are being bought in 10,000 lots by the quartermaster corps of the army, chiefly at the depots in Philadelphia and New York. Each officer down to the rank of captain is entitled to a desk and they are being made in quantities for the army at the various camps in this country and France.

Over 100,000 lockers for officers and men of the army have been contracted for by the quartermasters, and they are said to use hardwood in their makeup. The engineer corps of the army is reported to be buying handles and other hardwood materials. The medical corps has bought furniture, beds, chests, stretchers, and other equipment for hospitals, sanitary, veterinary, medical, dental, ambulance and hospital contingents of troops required for an army of a million men.

Purchases of these materials and equipment for the medical branches of the service are mostly made through the New York, Washington and St. Louis supply depots of the medical corps. The engineer corps buys chiefly through its depot in this city, the quartermasters department through depots at a dozen or more cities, but principally at Philadelphia, St. Louis and Jeffersonville, Ind. The ordnance bureau of the War Department is also buying furniture and other hardwood manufactures and supplies at its ten division headquarters throughout the country, about a dozen arsenals, and through ordnance inspectors at army camps and munition factories all over the land. Sixty sets of standard wood and metal filing cases were recently purchased for the quarter-

master corps. Six hundred and fifty thousand cots have been bought for the army cantonments and it is stated that "a few more" will probably be needed. Most of these cots are steel, it is said.

The lumber industry is being drawn upon quite freely by the engineer branch of the army. A recent report describing the work of that branch contains the following statements touching the industry.

Nine railroad regiments and one forestry regiment have been raised as part of the National Army. The engineer equipment order included four miles of pontoon bridges. Shipments to the army camps here totaled 48,000,000 pounds in 64,000 separate cases and boxes. Railroad equipment bought for American military purposes abroad included half a million ties, "a vast quantity of timber" and other supplies.

Woods for Special Uses

Manager Pritchard of the Southern Hardwood Emergency Bureau says that he understands that gum, ash, hickory, oak and pine are to be used in making the bodies of 10,000 standard army motor trucks recently contracted for by the War Department for delivery by next June.

Mr. Pritchard expressed satisfaction with the new ordnance bureau's specifications for ordnance equipment packing boxes. They permit the use of many hardwood lumbers, and Mr. Pritchard says there will be plenty of room for them all, as it is believed that probably hundreds of millions of feet of box lumber will be required.

Henry Ford, the Detroit motor car manufacturer, who has joined the shipping board's staff as an expert on standardization, says that the production of pleasure cars has to be curtailed, which will mean that the lumber used for car bodies will largely be available for other purposes, such as the manufacture of airplanes.

In view of the impetus recently given to the proposition for a big fleet of government freight cars to be used in relieving the war time congestion of traffic, and the announcement that a bill will be introduced in congress next month to provide \$100,000,000 for freight car building, lumbermen are urging that the proposed government cars be built of wood, owing to the scarcity of steel and the many other big demands for it.

About 53,000 cars of lumber have been shipped for government war purposes, the orders for it being placed through the old lumber committee or the director of lumber.

The large number of hard and softwoods used in the manufacture of airplanes will be increased by adding cypress lumber, if the idea of British purchasing officials here works out. They have been prospecting with a view to placing an order for 15,000,000 feet of high grade cypress for aircraft stock.

It is announced that the American Red Cross service is planning to operate experimental units in the line of portable barracks, standardized in sections, so that they can be set up for hospitals, rest stations, canteens, etc. These portable structures are made of wood very largely, and the same material, it is understood, is to be used in an American Red Cross artificial limb factory in France, which will supply the French government, at cost, with an improved type of artificial leg, to be used in lieu of the European type, which is said to be much heavier than the American artificial limb and not so well fitted.

The development of national forest reserves in the Appalachian Mountains is being delayed by the action of the Georgia legislature in enacting a law forbidding the government to acquire land in Georgia by condemnation without the consent of the owners. Of course, there is no necessity for condemnation if the owner consents to the acquisition of the property.

The purpose of the legislature, it is believed by the Forest Service, was to head off a plan under which the government sought to acquire considerable tracts of land owned by lumber companies in the Savannah and Georgia forest areas. The policy of the service will be to decline to purchase except at reasonable prices, and it is not believed in official circles here that the owners can find other pur-

chasers for the lands, for which prices asked of the government were considered unreasonable by the Forest Service officers.

Small Mills Handicapped

Many small mills are seeking to get into the lumber trade emergency bureaus, but when they come to explain their facilities they generally find that the government specifications cannot be complied with, because they call for finished material and in lengths and widths which small mills do not generally cut in quantity. While some small mills might be able to get out the stuff if they had unlimited time for doing it, it is explained that Uncle Sam cannot wait while the Prussian mad dog is running at large.

A. P. Smith, secretary of the National Wholesale Sash and Door Association, was in Washington recently and estimated that his association had distributed among its members orders from the government for between a million and a half and two million dollars' worth of sash and doors for the army cantonment buildings. These orders are well filled now and Mr. Smith expects additional government business here and abroad. He said that the Washington office will look after the details connected with government contracts and keep in touch with the situation.

Horace Taylor of Taylor & Crate, Buffalo, N. Y., is Mr. Downman's assistant on hardwoods and expects to remain at Washington until the end of the war. Hardwood purchases for the government and the allies will be passed upon by Mr. Taylor and his associates.

Lumbermen engaged on government business here have been cautioned against talking about orders placed with them, especially for export to France for American military purposes. It is feared that knowledge of such purchases may reach German spies, who can take steps to get the information to German submarines or to crooks in this country who might practice sabotage at the mills or elsewhere before the material leave American ports. It is understood that orders for millions of feet of lumber are being placed for export on government account.

It is reported that representatives of vehicle and implement wood interests are opening an office in Washington to keep in touch with government developments.

A new series of aviation schools is about to be constructed for the United States army which will call for many millions of feet of lumber.

Commandeering

It is said that the only commandeering order issued under the war power of the government has been directed toward getting ship timbers, although there have been reports of commandeering airplane spruce.

For the first time the war powers of this government are being exerted to compel the production of material for an allied government. This instance arose when the Douglas Fir Emergency Bureau advised the Council of National Defense that it might not be able to supply about 25,000,000 feet of fir for airplane stock for the Italian government and 10,000,000 to 20,000,000 feet of airplane stock for the British government. Orders for this material had been received some time before and there had been delay owing to labor troubles.

When the fir people made known their attitude, the case was put up to Director of Lumber Downman, who after consulting with certain officials, served notice on the fir bureau that the material must be furnished. His notice was based on action by the war industries board, which is said to have the commandeering power.

That the government should not go very much further in fixing prices of important commodities is the belief of high officials of the Council or National Defense, which probably means that lumber prices will not be fixed by government action for the present at least.

The defense council has decided that there is not legislative authority for the government to deal with the housing question as was proposed by the special committee on housing. Legislation may be sought later with a view to securing co-operation between the Federal Government and local communities and government

contractors in the matter of providing housing facilities for the increasing army of workmen on war orders. Meanwhile, however, each department of the government which has large war contracts out will do what it can to meet the scarcity of housing. The shipping board and some other departments, it is stated, have authority to pay contractors doing their jobs for expenses incurred in providing houses for their workmen. The reimbursing will be part of the contract price for the shipbuilding or other war job.

Non-Essential Articles

Officers of the government have been talking for some time about the necessity of curtailing unessential industries. This question became perhaps critical when the Railroads' War Board announced the other day that it had submitted to Judge Lovett, priority commissioner under the council of defense, and Dr. Harry Garfield, fuel administrator, a list of 525 commodities which the railroads did not deem essential, with the suggestion that they be denied transportation or required to wait until essential supplies and materials have all been shipped. This would have been equivalent to prevent shipment altogether, as the railroads practically admit that they cannot carry all the things necessary for the conduct of the war.

Immediately floods of inquiries came to Washington from business men in all lines wanting to know if their products were unessential. The list considered unessential by the railroads could not be obtained of the railroad people or at the council of defense, it being stated at the latter place that they are not engaged in making panics, and that no list of essential or unessential industries would be published by the government.

The Forestry Regiment

Lumbermen who have recently joined the war service of the country in the Twentieth Engineer regiment include George A. Bentley, who was in charge of the division of maintenance in the Forest Service headquarters at Washington. He has been made captain in the ordnance branch of the army and is serving on duty in connection with the purchase of material for this very important bureau, which is far larger in size now than the whole War Department was before the war.

R. T. Demsey of the Long Bell Lumber Company, who was for some time executive secretary of the priority committee of the war industry board, Council of National Defense, has gone back to the Southwest, being succeeded by Mr. Gaegan as secretary of the committee.

Knowlton Mixer of Buffalo and Walter Morrison of Minneapolis, retired lumbermen, have volunteered for Red Cross service and will take charge of branch depots of the organization in France for handling relief supplies for soldiers and civilians.

F. G. Wisner, chief assistant to R. H. Downman, director of lumber in the purchasing section of the war industries board, has at last left for a vacation, the first in several years. He went to Clinton, Iowa, to visit his mother.

Ammunition Boxes

Lieut. H. N. Knowlton of the Ordnance Reserve Corps, an old Forest Service man, is in charge of work in connection with specifications for wooden boxes for the ordnance branch of the army. Lieut. Knowlton has recently completed specifications for boxes for shipping ordnance equipment, and is now studying the matter of boxes for shells and other ammunition. These latter boxes never have been standardized, it is said, and they present quite a problem, owing to the many different sizes of shells and varieties of ammunition. A different box is now required for each type of ammunition.

For a long time the ordnance department specified only white pine for boxes, but under the new specifications prepared by Lieut. Knowlton, many different kinds of hard and other woods can be used. The woods are grouped according to their weight, the heavier varieties being permitted to be used in box making for shipping heavy materials, and the lighter woods for lighter boxes. Lieut. Knowlton says that weight and nailing are the secrets of success in boxes for army purposes. The Forest Service tests

showed that the manner of nailing is a very big factor. The lieutenant says that he has no idea what amount of lumber will be needed to make ordnance boxes or the cost of the same.

The specifications for the boxes designate the sizes and shapes, and the classes of lumber that may be used. Four groups of woods are acceptable, but the grouping is not based on whether the woods are hardwoods or softwoods, but are specified as follows:

Group 1. White pine, Norway pine, aspen, spruce, western yellow pine, cottonwood, yellow poplar, balsam fir, chestnut, sugar pine, basswood, cypress, willow, noble fir, magnolia, white fir, buckeye, cedar, redwood, butternut, cucumber, alpine fir, lodgepole pine.

Group 2. Southern yellow pine, hemlock, Virginia and Carolina pine, Douglas fir, larch.

Group 3. White elm, red gum, sycamore, pumpkin ash, black ash, black gum, tupelo, maple, soft or silver.

Group 4. Hard maple, beech, oak, blackberry, birch, rock elm, white ash.

Such matters as thickness, width, surfacing, nailing and joining are stated in detail.

Personals

Roy Jones has been selected to open in Washington a joint office for the Michigan Hardwood Manufacturers' and the Northern Hemlock and Hardwood Emergency bureaus, from which will be conducted a campaign of promotion among government officials and allied representatives, in the interest of the northern hardwood products, especially those coming out of Michigan and Wisconsin.

W. E. DeLaney having returned to Lexington, Ky., the office of the Southern Hardwood Emergency Bureau is occupied at this time by F. W. Mowbray of Cincinnati, representing eastern hardwood lumber manufacturers; H. B. Weiss of Memphis, representing southern hardwood manufacturers; J. M. Pritchard, the new manager of the bureau, and E. E. Myers,

The Southern Hardwood Emergency Bureau expects to do a good business with the home and foreign governments. It has been consulted by representatives of the same recently with regard to various prospective orders, one of them being a lot of hardwood railroad ties for the Italian government.

So extensive are becoming the lumber operations of the navy at its several yards and naval stations that it appears that lumbermen are to be placed in charge of such operations at those establishments. It is reported that George H. Cheeley, who has been an eastern representative of H. H. Hitt Lumber Company of Nashville, has been selected to take charge of the lumber yard in the Portsmouth, N. H., navy yard. It was not known whether Mr. Cheeley would accept the offer.

The number of lumbermen coming or writing here with a view to helping the government is constantly increasing. Last week Olin White, representing Love, Boyd & Co., hardwood manufacturers and dealers of Nashville, Tenn., was around inquiring about Uncle Sam's possible requirements for ash and other hardwood stock. Mr. White has been mentioned for possible appointment to the engineer reserve corps, U. S. A.

Robert Allen, secretary of the West Coast Lumbermen's Association, is here working in the interest of far western lumber manufacturers.

Harry T. Kendall of the Kirby-Bonner Lumber Company and E. A. Smith of New Orleans are on the job in the Southern Pine Emergency Bureau.

Arthur B. Ransom of Nashville, Tenn., is one of the well-known hardwood lumbermen here this week. Mr. Ransom inquired what his three mills could do to help the government. He is reported to be finishing a contract for 5,000,000 or 6,000,000 gunstocks for a certain government. One of Mr. Ransom's mills, it is understood, has been making music boxes or Victrola cabinets and he was inquiring about the extent of possible curtailment in the production and shipment of musical instruments. He is understood to have learned that Judge Lovett, the priority commissioner, recently issued an order restricting the shipment of materials for musical instruments, passenger vehicles, etc., to the extent of requisitioning open top cars for other purposes.

A. L. Johnson, president of the Mansfield Hardwood Lumber Company, Winnfield, La., has been appointed member of the managing committee of the Southern Hardwood Emergency Bureau. One more member of the committee is to be appointed from the eastern district of the hardwood section.

Mr. Pritchard says that it is not planned to readjust hardwood prices to the government periodically, as pine prices are adjusted monthly. Hardwood orders are generally for special stock and there may be a different price on each.

J. M. Pritchard Becomes Manager of Southern Hardwood Emergency Bureau

John M. Pritchard, secretary of the Gum Lumber Manufacturers' Association, left for Washington November 14, closely following the action of the board of governors of that organization in lending his services to the Southern Hardwood Emergency Bureau at Washington for the period of the war, and has already entered upon his new duties, involving the distribution of such orders among the hardwood trade as are placed by the government for war purposes.

The unanimous action of the board of governors of the association in lending the services of Mr. Pritchard to the bureau for the period of the war resulted from receipt of a telegram from M. W. Stark, chairman of the bureau, to H. B. Weiss, president of the association, in which he declared that Mr. Pritchard was the most available man for the position because of both his training and his abilities.

Immediately after adjournment of the meeting of the board, which was attended by practically all members thereof, as well as by numerous lumbermen identified with the association, Mr. Weiss sent the following telegram to Mr. Stark at Washington:

Your telegraphic request of the tenth instant received. Directors held meeting today. Unanimously tender the services of our secretary to the emergency bureau and offer entire resources of the association to the government through your bureau. Pritchard leaves Wednesday night.

He also dispatched the following wire to R. H. Downman, director of lumber, raw material division, war industries board, Council of National Defense:

At the request of M. W. Stark, chairman of the Southern Hardwood Emergency Bureau, we have today given the services of our secretary, John M. Pritchard, to the bureau for the period of the war. We feel that Mr. Pritchard will be of inestimable value to the bureau and to the government. This association, to the last man, will stand behind the bureau and the government, backing their actions, and is anxious to co-operate to the end that greater efficiency may be developed and the war brought to an early and successful termination.

The members of the board and all others present not only agreed to do everything they could in behalf of the government, but they assured C. E. Van Camp, on whom the duties of Mr. Pritchard will largely fall, that they would give some of their time toward assisting him in directing the affairs of the organization during the absence of Mr. Pritchard.

Mr. Pritchard said, before leaving, that he had never seen a more loyal or patriotic spirit displayed than that shown by those who attended the meeting of the governing board of the association, and that, after listening to the declaration that every man stood solidly behind the government and the bureau, he was leaving Memphis with the positive conviction that every member of the association meant just exactly what he said.

Mr. Pritchard hopes to return to Memphis for the holidays, and also for the annual of the Gum Lumber Manufacturers' Association in January, but he said that his immediate future plans would be determined by the requirements of his new work and that he did not know what he would be able to do in the direction of following his own inclinations about getting back to Memphis. His family will remain in Memphis for the present.

The enthusiasm generated at this meeting of the governing board reached such a high pitch that it was decided to organize a volunteer war council among Memphis lumber manufacturers to co-operate with the bureau and with the government in seeing that the latter secures its full requirements in the way of hardwood timber and lumber. This war council, it is planned, will hold luncheons at stated periods, and no subject will be allowed discussed that does not bear directly on the needs of the government and means for taking prompt care thereof.

Memphis is particularly well represented on the Southern Hardwood Emergency Bureau. In addition to having Mr. Pritchard as the manager of this bureau in the placing of orders among members of the hardwood trade, it has four members of the bureau: H. B. Weiss and R. L. Jurden, who have been identified with the bureau since it was first organized, and Ralph May and W. A. Ransom, who were elected thereto when it was decided some days ago to increase the size from six to twelve.

Each of these four lumbermen has agreed to give two out of every six weeks to the work of the bureau at Washington, with the result that one Memphis member will be in Washington all the time. It is clearly understood, however, that, in the distribution of orders, Mr. Pritchard will be governed almost wholly by the necessity of conserving freight room, whether on cars or on ships. Lumber will be ordered where it can be delivered with the shortest haul, whether to an industry or to a port for clearance for Europe.

GENERAL VIEW OF THE BABCOCK MILL INDICATING ITS UNUSUAL PROPORTIONS AND SUBSTANTIAL CHARACTER. The photographer waited about five minutes for the smoke to clear away, but was in danger of missing the special train and so finally let drive in spite of the smoke.

Mountain Loggers Meet

Due to the recent enlistment of former secretary Henry W. Grinnell, the members of the Appalachian Logging Congress approached their third annual meeting last week, dependent entirely upon their own efforts and resources of energy and organizing ability to get by. They met the issue splendidly and came away from the congress with a more definite aim and a greater unity of spirit than ever.

About seventy-five men directly connected with logging in the Appalachian and Big Smokey ranges gathered for a three days' session at the Hotel Atkin in Knoxville on Wednesday, Thursday and Friday, November 21, 22 and 23. It sometimes takes considerable time to cover a short distance in that country of steep grades and sharp curves and the result was that the attendance at the first meeting was rather straggling. The first day's session was given over to arrangement of the program for the two following days, and the afternoon to general talks on a variety of subjects. The feature of the Wednesday session was a spirited appeal by Lieut. R. H. Faulkner of the 20th Engineers. This is the second forestry regiment to be organized for service in France. Lieut Faulkner's appeal was for more practical woodsmen to enter government service in this regiment so that its ranks, which will ultimately hold 17,000 men, may be speedily filled. His talk was very impressive and undoubtedly will bear very real fruits. He asked for co-operation by the loggers in directing enlistments from among their workers.

President W. B. Townsend also delivered an excellent address in which he laid stress upon the necessity for country-wide support of the administration and for the conservation of materials and energy and their consecration to war work.

Watson Ford, of the Babcock Lumber & Land Company, gave a brief description of a remarkable locomotive crane of which the com-

pany uses several in transporting the lumber from its big new mill at Maryville near Knoxville to the mill yard. The operation of this crane was witnessed by the loggers on a trip to the company's mill on Friday.

E. A. Gaskill, who is with the Turkeyfoot Lumber Company at its Cressmont, Ky., operations, emphasized the real need for improving living conditions at the log and sawmill industries. He emphasized the growing seriousness of labor and the increasing

difficulty in holding it at operations. He stated that as a panacea for these troubles nothing is more effective than the maintenance of such living conditions as will make it an inducement for labor to stick.

The Vestal Lumber & Manufacturing Company was the host at a theatre party on Wednesday evening, the visitors enjoying a performance by an excellent company in a leading theatre of Knoxville.

Thursday Morning Session

Beginning the Thursday morning session President Townsend appointed a committee on resolutions and called for reports on standing committees. The committees on finance, legislation and membership had no reports to make. H. F. Holt, reporting

for the committee on arrangements, stated that the plans of the congress had been greatly upset by the sudden resignation of Secretary Grinnell, and it was necessary to work hard and fast in order to get things in shape for the meeting. The president then called for a report from acting secretary Williams, Mr. Williams having consented to fill in in Mr. Grinnell's absence. Secretary Williams read the minutes of the preceding meeting and stated that the association at its last session had sixty active members and twelve associate members and this list was materially increased before the third meeting was concluded. The report was adopted.

The nominating committee then reported recommendations for the

election of the following officers:

PRESIDENT, E. A. Gaskill, Cressmont, Ky.
 VICE PRESIDENT, G. D. Gasteiger, Braemar, Tenn.
 SECRETARY TREASURER, J. R. Williams, Knoxville, Tenn.
 The executive committee, consisting of the officers and the following:
 John Shea, Knoxville; D. G. Manges, Tellico Plains, Tenn.; Bert Hurt, Sun-
 burst, N. C.; W. T. Litham, Andrews, N. C.

President Gaskill in acknowledging the honor of his election, insisted that his administration will be a working administration and further insisted that he must be supported by a working membership. He emphasized the necessity for enlisting the interest of the principals in the different firms represented in the working of the logging congress. This sentiment was echoed by Retiring President Townsend. On motion the Appalachian Trade Journal, published by Secretary Williams, was adopted for another year as the official organ of the congress.

A vote was taken from those present to get an indication of preference for the meeting place for the spring meeting. Cincinnati led, but the matter will be left to the executive committee.

C. G. Babcock reported informally for the committee on labor and employment. He gave a general talk on the question of meeting conditions as they develop and covered the problem of lack of uniformity in woods wages, stating that this is one of the primary causes for shifting labor. Rumors reaching men in one camp of excessively high wages in another camp, even though the rumors may ultimately be refuted by actual conditions, are the constant cause of men shifting from one job to another. He maintained that any methods that would work toward greater uniformity in wages or at least toward a better understanding among the members of the wage scales employed by their neighbors would tend to minimize this tendency of labor.

In taking up the subject of logging conditions and the effect of labor on logging costs, former president W. B. Townsend said that while in the southern pine regions a price of \$5 for logs delivered at the mill is considered high, this figure is usually equalled in the mountain regions for the mere cutting and bucking of the logs. He emphasized the absolute necessity for doing something to meet the seriousness of the labor situation, prophesying that if adequate measures are not provided the woods departments will be destined to failure in their work of keeping the mill supplied with logs. Mr. Townsend urged local meetings of loggers in different communities or sections at which problems particularly interesting to operators in respective sections could be discussed.

The president then appointed the following committees:

FINANCE—Geo. E. Delaney, chairman; Lewis Doster, John Shea.
 LABOR EMPLOYMENT—C. G. Babcock, D. G. Manges, F. L. Winchester, Bert Hurt, W. E. Ijams, J. E. Coburn, G. D. Gasteiger.
 MEMBERSHIP—John Raine, R. W. Stonaker, G. J. Prater, L. W. Cathey, C. S. Badgett, E. M. Vestal.
 ARRANGEMENTS—H. F. Holt, W. C. Champion, J. C. Mitchell.

On motion the president created a special committee of three on entertainment to be appointed from associate members. Lewis Doster was made chairman of this committee. The other members are C. H. Mackintosh and H. W. Dexter.

Thursday Afternoon Session

W. C. Champion opened the afternoon session with a paper on logging machines and their general application in the Appalachian mountains. Mr. Champion said that, combining practical suggestions with engineering technique, manufacturers have brought steam apparatus to a high degree of efficiency. He said, though, that no two operations could be figured out on exactly the same basis. This means, of course, that various types of machines are necessary. Speaking of the cableway skidder, which is being widely used in very rough country, Mr. Champion said these machines operate economically up to about twenty-five hundred feet and will handle about 25,000 feet of logs a day at a cost of \$1.50 to \$4.00 per thousand delivered at the track. He said that in December, January and February the cost seemed to range higher than during any other months. He emphasized the necessity for having means whereby the machines may be moved quickly and easily. Mr. Champion gave a detailed description of the equipment and operation of the machines and stated that they are made in different sizes capable of reaching 1,500 to 4,000 feet.

He described the skidder's operation in rough, hilly country. Frequently the cableway skidder is used to connect a single line of logging track on top of one ridge and bring the logs from the adjoining ridges to the main line, thereby saving the construction of other spurs out along the other ridges. Even though considerable relaying may be necessary in cleaning up adjoining ridges, this additional cost more than offsets the cost of constructing additional trackage.

In describing the ground-haul skidder for use in getting out logs on hauls as long as a mile up long hollows, Mr. Champion said the machine must be able to carry sufficient cable capacity

for the skidding and outhaul lines going back about a mile and that to negotiate the curves in these hollows it is necessary to put in rollers of different construction to hold the line in place and also on the very long hauls log slides must be used. This frequently allows the hauling of forty to fifty logs at a time at a cost of as low as \$3 per thousand.

Referring to the difficulty in getting economical operation in some of the very rough Big Smokey country, Mr. Champion described one method which is working out successfully. The operator has built an incline up the deep hollows in the mountain sides having a grade of fifteen to thirty-five per cent. By using the light cableway skidder which will pull itself up the grade, he is able to log the sides of the hollows by the cableway method. It then becomes necessary to have another machine equipped with a drum of sufficient capacity for handling cables up to a mile in length. This drum is so designed and has sufficient braking surface so that it can handle logs on the maximum grade in connection with this engine. A loading engine is then used to place the logs on the cars. This method has been economical and very saving in railroad construction costs.

He described another operation that is known as the horse-tram method. This is used in a series of ravines and flat plateaus. The logging on the plateaus is done with horses and the tram road is run up the ravines into which the logs are dumped. They are hauled

CHAPEL OF THE MARYVILLE COLLEGE WHERE THE VISITORS ATTENDED MORNING SERVICES ON FRIDAY.

to the trams by a light skidding rig and are loaded on tram cars with the same rig. The same operator in connection with this method uses engines which can be hauled on the tram cars for cutting the logs out of the roughs. These same engines are used with aid of a jin pole for loading logs on the tram cars. The cost of delivering logs to the road in this operation is around \$5 per thousand.

He then referred to one operator who used the mechanical outhaul ground skidder on top of a very level plateau. He is getting his logs out at a cost of around \$1.50 per thousand delivered to the track.

LOGGING COSTS

H. W. Dexter, of the Lidgerwood Manufacturing Company, read a paper which had been prepared by J. H. Dickinson, manager of the logging department of the firm, Mr. Dickinson being absent.

In his paper Mr. Dickinson emphasized that his object was to cite cases of low logging cost and give the reasons for making such figures possible. He then differentiated between the terms "cost of logging" and "logging cost," saying that he had been reminded of this difference by an accountant connected with the Lidgerwood company, who viewed statistics from a different angle than the practical operator. Mr. Dickinson described the manner in which he was enlightened as to this difference. The main point of difference between the practical man's conception of what it costs to log and the actual cost of logging lies in the character and number of items which properly should be charged, in part at least, to the logging cost.

The speaker said: "As conditions vary on different operations the cost kept in detail would enable loggers comparing costs either between operations of their own or of other loggers, to see where the difference occurs. It will show a logger whether the difference is one that is unavoidable or one that can be overcome by a change in methods and machines. If you are delivering logs from the woods to the cars for say, \$3 per thousand, and it is costing one dollar per thousand for hauling them to the mill, and you can change your methods and reduce your railroad cost to fifty cents, with a cost increased to \$3.25 on the other work, then you have reduced the total logging cost from \$4 to \$3.75."

He further emphasized the vital necessity for knowing in the

most intimate detail the cost of every feature that adds to the outlay that should properly be charged to the item of logs delivered at the mill. He said that the cost which does not include every cent directly or indirectly paid out; a cost of any complete operation in which each step does not include the amount properly chargeable to that particular account, is misleading and dangerous.

The speaker then referred to a letter that has been received by his company from E. A. Gaskill, superintendent for the Turkey Foot Lumber Company at its Cressmont, Ky., operations. This letter was so well thought of that the Lidgerwood company has had it printed in pamphlet form, and has copies for distribution to interested loggers. It gives a very lucid analysis of logging problems and is well worth reading.

J. D. Wyrick delivered a paper on "Waste Utilization," in which he outlined means whereby lumbermen may save on waste through utilization as by-products.

N. W. Gennett, of Franklin, N. C., had prepared a paper on "Portable Mills," which, in his absence, was read by W. T. Latham of Andrews, N. C. Mr. Gennett gave arguments pro and con on the "portable vs. the band mill," the gist of his argument being that the portable mill is naturally more wasteful and much less economical than the band mill, but it is justified, under certain circumstances. These circumstances embody a very high quality of timber, thus minimizing the production of less valuable lumber. The

portable mill is operating successfully because it usually is operating on such stumpage; because the overhead is practically nothing as it is generally run by the owner who charges himself nothing for his labor; because it can be shut down with no carrying charge; because his log and other costs are absolutely minimized. Unless these conditions hold, the circular mill, with its extravagant kerf, its inability to utilize slabs and other offal, its heavy dog boards and its high operating cost will be absolutely impossible.

H. F. Holt, of the Holt Engineering Company, of Asheville, N. C., had a paper on "Operating Timber Estimates," in which he emphasized the necessity for a complete and thorough analysis of a prospective operation before going into it. He laid stress on the vast help to the operator if he has, as a basis for his operation, a thorough knowledge of the technical problems and details involved.

Veneer Statistics Lacking

Need Is Felt for Fuller Information on This Important Matter

NO EXPLANATION has been offered to account for the lack of veneer statistics. The government compiles and publishes figures annually to show the output of lumber by states and by species, but veneers do not come in for consideration in the same way. Some of the best posted men in the veneer business are ready to confess that they do not know the annual output of that product in the United States. Each separate operator knows what his production is, but it is not his business to go farther than that in the way of collecting figures. The government is the most logical authority to take that up, as it does in the case of lumber.

It would not be a difficult matter. Veneer mills are few in comparison with saw mills. There were only 637 veneer establishments in the whole United States in 1909; in 1908 there were 402, and in 1907 the number was 370. Figures for 1909 can be had in much detail, and some data for preceding years, but when the deadline of 1909 is passed in the approach to the present, information regarding the production of veneer is lacking, or at any rate is very scarce.

For some reason the census people rested from their labors after 1909, so far as veneer is concerned. That has been eight years ago and the gap is pretty long. The reason why the returns for 1909 were so full and satisfactory is that the regular decennial census was taken that year, and nothing escaped. More information regarding the veneer industry was collected that year than ever before or since. The cut that year totaled a little less than half a billion feet, log scale.

It is not worth while to make guesses what the total annual output of this community now is, but it is safe to say that it is twice what it was eight years ago. The industry has been growing rapidly and it may be expected to continue growing at a rate no less. The separate uses of the product may not have increased greatly in number in the last eight years, but there has been great increase in quantity along many of the lines.

When veneer is listed for statistical purposes it is measured by log scale, but when it is bought and sold, surface measurements usually are employed. The two measurements are wholly different and there is no common multiple or division for them. This fact has caused some confusion for those who examine statistics. When the statement is made that a mill cuts 1,000,000 feet of veneer, log scale, it means that the logs were measured before being manufactured into veneer. In round numbers, that quantity of logs would cut 1,000,000 feet of inch lumber. But veneer is thinner than lumber, and it is customary to estimate it by surface measure without regard to its thickness. A sheet of veneer five feet long

and four feet wide contains twenty square feet, no matter how thick or how thin it is. The surface of one side only is measured. Suppose each sheet is one-twentieth of an inch thick. Twenty of such sheets would stack up one inch high and would amount to 400 feet of veneer, but only 20 feet of lumber.

Some veneer men have suggested that when the government again collects statistics of this industry, it would increase the value of the figures if totals were given in both log scale and in veneer measure. This would show how to average the waste factor in reducing log measure to veneer measure. The waste is pretty large, but no one seems to know just how large it is. It has been very accurately figured out for lumber, and the mill man can tell within narrow limits the quantity of lumber that can be cut from a million feet of logs. If data were carefully worked out and compiled it would be as easy to tell how many surface feet of veneer of a given thickness might be cut from a million feet of logs.

How One Firm Reduced Its Glue Bills

Hardwood Record has received the following letter from a prominent user of panels, a man who has had a good deal of experience in glue rooms, who advances some new ideas on the proper way of handling glue to minimize its cost and get the highest type of efficiency:

Since the war started prices of glue have gone higher and higher. Some manufacturers have chosen lower grades and thereby experienced no end of trouble, while others are substituting bone and vegetable glue. It is our experience that every glue has its place. We make no charge against any glues but know absolutely that no glue will compare in strength with hide glue. We have been asked time and again, "How do you determine glue quality and what assurance have you that the grade will always be the same?"

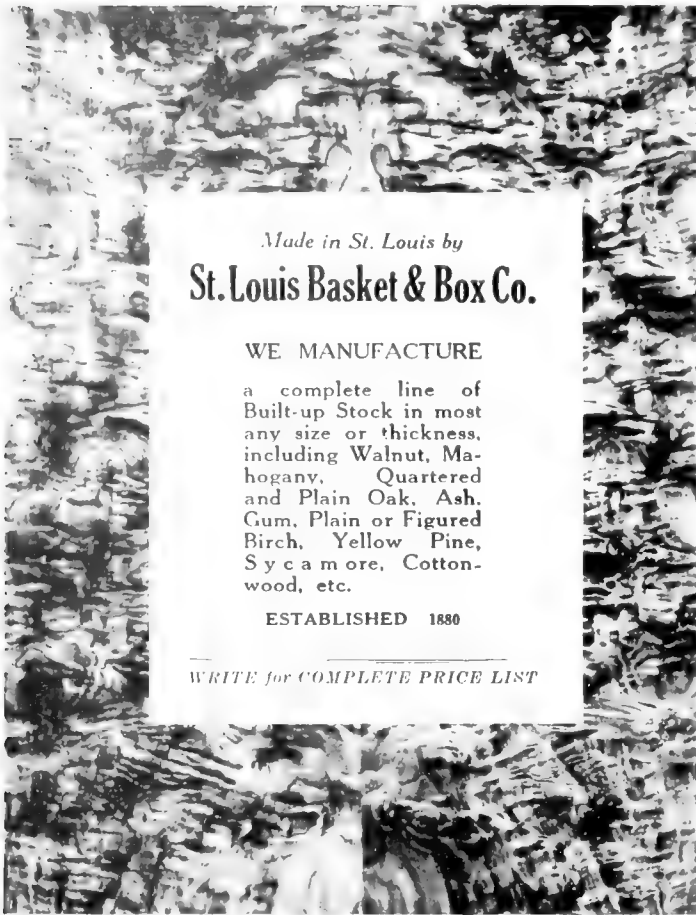

We combined a few chemical tests with practical determination, and, largely common sense. For instance, we determine how much heat the glue will stand and its adhesive strength in pounds per square inch. One can easily determine the heat the glue will stand by preparing several batches at different temperatures, beginning with 120 degrees Fahrenheit, and not exceeding 180 degrees, and heating them different lengths of time. We then take the different solutions and glue up pieces of oak end to end, and side to end, properly clamping them and permitting the joints to dry. The one giving the highest strength would be the glue preferred.

Grease is an enemy to glue and we have a very simple method to determine its presence; in fact, any boy of ordinary intelligence can do this successfully. Drop a little aniline on a brush full of glue, wipe the brush in circles upon a bit of paper, then suddenly draw the brush across the paper and see if there are any white spots left in the path of the brush. White spots mean the presence of grease, and the more spots counted, the more grease.

We do not give a great deal of attention to viscosity, although we make the tests. Years of practical experience in using glues has taught us that a high viscosity of a glue solution may not be entirely due to glue principles present, but may be in part due to the presence of deleterious chemical substances.

If woodworking manufacturers will try our "time tried" suggestions, they will have a pretty good barometer on their glue bills, and, in many cases, improve the quality of their goods. We know.—A. T. D.

Letters from a Panel User

ABOUT FINISHING

Monroe, Mich., November 22, 1917.

A century ago the cabinetmaker was supposed to manufacture furniture from the log without machinery. He did his own finishing and mixed his stains from such colors as were available. Little attention was given to grain, usually a very dark finish was applied so as to hide the beautiful grain of the wood.

Changes have taken place within the past hundred years, but some finishers still kill the beauties of the wood with colors which are an eyesore to everyone.

When will we ever wake up and adopt standard colors—one shade of mahogany, golden oak, walnut, as well as other finishes? Furniture dealers throughout the country have protested for years against the desecration of wood, but their appeals were never taken seriously. A few of the progressive manufacturers, appreciating that success is possible only through co-operation, changed their colors so that the beauties of the veneer and solid wood were visible. They engaged finishers who possessed artistic temperaments and the result of improved finish was surprising. When people saw the beauties of the grain of the wood, veneers so artistically matched, they decided that plain furniture, pianos, etc., is what they wanted. No more artistic carving. This also resulted in quite a boost for the panel manufacturer. Price became secondary. The progressive manufacturers requested panels showing the beauties of nature, the panels to be well made and properly sanded. The panel manufacturer on the other hand experienced no trouble getting reasonable prices. He realized, though, that he must purchase the finest woods available. Most manufacturers of panels have made money because they supplied the demand with the class of material that was wanted. No effort was too great for them.

It is to be regretted that there are many finishers and finishing room foremen who will not listen, who will not read and who will not apply the latest colors in finishing. Many of them will say: "What does the old man know about finishing, anyway? He has been cooped in his office for years. I apply this stuff every day and have worked at the trade for years."

Different woods require different methods of finishing. For instance, mahogany does not sand so smoothly as oak and other hardwoods. The fine hair-like fibers will bend beneath the sandpaper, and when some are cut off others rise to take their places. This, of course, requires careful attention. You would not experience this with oak. I would suggest that only men understanding their business be instructed to do this sanding. No matter how good your finish may be, unless these fibers are removed, the job will be unsatisfactory. Poor or improper sanding during and before finishing may result in the loss of the sale of the piece.

Mahogany stains are the most common used in furniture, piano, and other factories, and more or less for interior finishing.

One of the greatest problems of the finisher is to take account of the difference between the color of the solid wood and the veneered. Again, the solid pieces of wood entering into the construction of the piece of furniture may have been taken from different trees, so the finisher is up against it. His color may be right but some pieces may absorb more stain than others. This is particularly true on birch work where the stiles are of birch and the panels veneered mahogany. In such cases I would suggest two stain solutions, the one a little darker than the other. Very good results are obtained in coating the birch with two coats of stain and the veneered panels with one coat. No rules can be established—experience and common sense should determine the method of finishing and the mixtures of the stain solutions.

Success in running the finishing room, which means getting perfect work at a low cost, can be reached only along one road. Each operation must be properly done before the next is started. The finisher or finishing foreman must be a Sherlock Holmes. He must see everything at a glance.

In many finishing rooms boys are employed to do the sanding,

IN 1881

GEORGE W. HARTZELL began converting walnut logs. Thus for thirty-six years this institution has steadily progressed in its mastery of the problems involved in successful walnut manufacture.

Its notable growth is the result of profiting by experience—by the discovery and adoption of methods and equipment always in advance of current custom.

Hartzell's Choice Walnut is made by such methods from the best known growth of virgin trees—in a region which gave walnut its first claim to fame more than a generation ago.

staining and filling. Boys are boys and will never be otherwise. When I was a boy I liked to shirk when the foreman wasn't on the job. Unless the foreman sees what is being done, there may be poor sanding, staining or improper filling. Most workers favor a filler with plenty of oil in it, which will wipe easily. Unfortu-

nately, however, if too much oil is used and not enough drier, the filler will sink in drying and fail properly to fill the pores.

Today fumed oak is probably the most popular oak finish. Most finishers are familiar with the process of fuming and are employing modern fuming boxes.

Barrels Made of Veneer

Different Styles of Containers Manufactured of Thin Woods

CERTAIN KINDS OF BARRELS and kegs are manufactured of veneer instead of thick staves. Published statistics of the cooperage industry do not distinguish between containers made of thick staves and those of thin sheets or slats of veneer, consequently it is not possible to quote figures to show the amount of material going into each class. The annual output of staves for barrels of this class runs between 2,000,000,000 and 3,000,000,000 a year in the United States, and such staves are of various sizes to suit the manufacturers of barrels of different kinds; but that is as far as published statistics throw any light on such staves. It is well known, however, that some are of woods which range from a quarter to a half-inch in thickness.

The veneer barrel is not in this class, yet it does not differ greatly from it. Some such barrels are of thin slats, held in place by hoops or by bands or cleats, or they may be interlaced in a sort of basketwork. A barrel of that kind bears considerable resemblance to a

basket, or it may partake of the nature of a crate, though in the form of a barrel. Its chief characteristic is the thin wood of which it is made. Being of veneer, it is very light, and a saving is made, not only in the first cost, but freight bills are smaller than in the case of barrels with thick staves, because the weight is less. The veneer slats in such a barrel may cross one another diagonally, there being two courses, and the barrel's wall consisting of five layers.

Veneer barrels of another pattern are made. They do not consist of staves or slats, but of sheets of veneer. A single sheet is rolled to make a barrel, and the container is complete when the heads are put in place. Such a barrel is in three principal pieces: the two ends and the single sheet that forms the sides. However, there may be, and usually are, cleats on hoops to strengthen the structure. Such a barrel or drum may be of one ply, but the best and strongest are of two or more ply. Vessels of that class usually pass under the name of drums rather than of barrel. They generally rate at a little higher class than the slack barrel composed of staves or of slats of veneer. The sheets forming the three-piece drum or barrel may be of nearly any wood, but the service intended has much to do with determining the selection of the wood. A cheap container may be made of sheets of pine, spruce, or some other softwood; but a little better drum is of cottonwood, basswood, tupelo, poplar, or gum.

Veneer barrels made of staves or slats may be used to secure ventilation. The contents, such as fruits and vegetables, may require circulation of air. Containers of lattice work are best if ventilation is the principal object sought. Another class of barrels has exactly the opposite purpose. They must be practically airtight. No openings or meshes must exist, otherwise the contents will dust through and be lost. The three-piece drum of veneer is best. The drum in which finely-pulverized sugar (berry sugar) is shipped is an example. The ordinary stave barrel will not contain sugar of that kind, consequently the veneer drum is demanded. There are many finely-ground commodities, besides sugar, which go in such drums.

The veneer drum does not generally have the bilge of the barrel. It is so strong that it needs no bilge. It is seldom crushed or broken, even in the roughest usage. The barrel's bilge acts as an arch to strengthen the container, but the veneer drum is strong enough without it.

Veneer for barrels and drums is cut by the rotary

American Walnut Veneer

A Sample Which Shows the Class of Veneer We Handle

Our Efforts Are Centered in Obtaining the Highest Grade of Figured Walnut for Veneer Cutting.

Our customers' often repeated orders prevent us from keeping a large stock on hand, but as we are continually selecting our stock from the large quantity of logs we handle, we always have a nice line of the highest grade to select from.

Our reputation is based on "Quality, not Quantity," in our veneer business

process in nearly all cases. In some instances it may be cut with a saw, as other staves are, but this is done for barrels only, and not for drums. The wide sheets required for such vessels must be cut by the rotary process.

Published statistics relating to the wooden shipping container business have never made a very careful distinction between the veneer box or barrel and the common box or barrel; but the time has come when such distinctions are necessary. The use of veneer is increasing at a rate which will soon place it in an important position and separate figures for it will be demanded. The tendency is to economize in wood, and the maker and user of veneer for shipping containers is a practitioner of economy. Wood goes farther and serves as well if not better. The body of the log may be peeled for rotary veneer, and the central core can be ripped into strips for cleats or hoops, or even for heading. The waste in the form of saw dust is thus greatly reduced. The demand for shipping containers has greatly increased in recent years and will continue to increase, and the veneer maker will find his field constantly enlarging if he is to keep abreast of this increasing demand.

Woods most largely used in the class of slack cooperage to which barrels and drums of veneer belong are, in the order named, red gum, pine, beech, elm, maple, chestnut, birch, basswood, spruce, cottonwood, and tamarack. Some of these are not ideal for rotary veneer, but others are among the best supplied by the forest. Among woods most largely cut for veneers in this country are, in the order named, red gum, yellow pine, maple, cottonwood, oak, yellow poplar, birch, tupelo, elm, basswood, and beech.

It will be seen that this list corresponds pretty closely with the list of slack cooperage woods given above, and it indicates that the relationship between veneer and slack cooperage is very close.

Mississippi Veneer Company Incorporates

With a capital of \$50,000, the Mississippi Veneer Company of Lexington, Ky., has been incorporated with principal offices in Lexington, while a portion of the operation will be in Mississippi. The incorporators are: G. W. Headley, Jr., and L. A. Headley, Poplarville, Miss.; H. P. Headley and Douglas Hoagland, Lexington, and C. B. Ashbrook, Sandersville, Miss.

New Manager for Veneer Plant

C. Fred Calhoun, manager of the Antigo (Wis.) sawmill and other local interests of the Frost Veneer Seating Company, Sheboygan, Wis., for fourteen years, on November 12 assumed the duties of general manager of the company, with headquarters at Sheboygan. He succeeds his late father, W. C. Calhoun, who died suddenly at St. Joseph, Mich., in September. Leo P. Young, manager of the Frost interests at Newport, Vt., for several years, has been transferred to Antigo to take up Mr. Calhoun's duties.

Not only do millmen suffer for want of cars, but they have a mighty poor chance for a come-back at the railroads for losses incident to transportation delays—inability to take care of orders, loss of time, shutdowns, etc. With this condition existing the railroads need hardly expect a friendly attitude or generous treatment in the matter of freight rate advances.

*Highly
Specialized
Workmanship*

*Completely
Developed
Facilities*

The two phrases above represent what is absolutely essential to successful panel manufacture. Our policy has been to educate all of our workmen as closely as possible along specific lines, and to omit no item of equipment that would help make for more nearly perfect service.

The supreme test of efficiency in veneer laying is admittedly the ability to successfully veneer bent shapes. It was on this work that the reputation and growth of our business was founded—this and a quite uncommon bent for artistic matching.

And remember, when you are ready to order we have a complete selection of veneers for your choice.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

(Continued from page 25)

G. O. Mitchell, of the Ball Engine Works, Erie, Pa., gave a general talk on the machine his company is putting out. He was followed by W. T. Latham, who led a round table discussion on waste in the woods. Mr. Latham said that there seems to have been but little decrease in woods waste over operations of twenty to twenty-five years ago, except that in most instances stumps are cut lower. He said that there is very frequently a waste in miscutting of log lengths and that a real saving can be effected by having a man in charge of marking trees for proper lengths into which to cut them. He also suggested that the manufacture of charcoal might be a profitable means of utilizing wood waste.

W. B. Townsend emphasized the growing seriousness of the question of logging cable and the general discussion revealed that it is practically impossible to get assurance of delivery even of second-hand cable. This is increasingly serious on account of the necessity for more machine power to replace man power. It developed that some mills are now shut down because of insufficient logging cable, but it was further brought out that the government seems to be making an effort to determine industrial requirements so as to provide sufficient cable to make possible the carrying on of important industries.

On motion, it was decided that individual operators should send to the secretary a statement of their approximate requirements for 1918 in logging cables, and that the secretary should forward this list to the priority board at Washington, together with a statement of the purpose of the members to do everything they possibly could to assist in government work.

There followed a general talk on government needs and it was clearly brought out that the loggers appreciated the seriousness of the situation and are fully willing to do everything in their power to help.

The resolutions committee reported resolutions of appreciation of the work done by the officers and the committee on arrangements which handled the convention in the eleventh hour.

There was a resolution pledging the loyalty and support of the association to the government. The report was adopted and adjournment followed immediately.

The Banquet

Thursday evening was marked by an elaborate banquet tendered by the machinery, equipment and newspaper men present. There were about 150 guests including six or eight ladies.

Charles H. Mackintosh, of The Clyde Iron Works, Duluth, Minn., acted as toastmaster and called upon several good speakers. The feature of the evening was the patriotic spirit which pervaded the entire proceedings, and which culminated in a collection of \$150 to be distributed equally between the Red Cross and the war Y. M. C. A. work.

The banquet was followed by entertainment consisting of general singing, and of a fistic program in which several black citizens of Knoxville participated.

The Excursion

Friday was given up entirely to a trip of absorbing interest through the woods and sawmill operations of the Babcock Lumber & Land Company. The woods operations are located along Slick Rock Creek, which for a measure of its length, is the dividing line between North Carolina and Tennessee. The sawmill is located on the outskirts of Maryville, Tenn.

"All aboard" was called by the conductor of the special train at 7 a. m., there being over a hundred loggers on the passenger list. The train arrived in due time at Maryville, which is about thirty miles out of Knoxville, and the entire party disembarked for a two-hour inspection of the remarkable plant that was recently completed by the Babcock Lumber & Land Company. This mill, which is of the most modern possible type, and in fact is way in advance of many supposedly modern ideas, will cut from 100,000 to 120,000 feet of hardwood lumber on a ten hour run. The mill is of very

substantial construction, brick and concrete being prominent. Incidentally, it might be of general interest to mention the fact that the entire Babcock operation, including mill, yard and all of the woods work, is equipped with silver steel saws, made by E. C. Atkins & Co., Inc., Indianapolis, Ind. The operation calls for an expenditure of a good many thousands of dollars a year for saws alone. The Atkins people were well represented by Lewis Doster, assistant to the sales manager, G. W. Schafer and Robert B. Nixon, general salesman.

The inspection started in the main sawmill room, which, with its accessory apparatus, is capable of utilizing to the last possible economic unit the splendid big poplar, hemlock, pine and red and white oak logs that come from the company's timberlands. The company is now constructing a large dry kiln and a good sized planing mill and flooring plant. Several hundred men will be employed in the mill and the yards.

The party went from the mill through the sawmill colony which has been built by the Babcock company, and then on through the imposing series of alleys in which the piles are quite unusual for southern operations. The lumber is all piled in even lengths and splendidly aligned, the piles acquiring an imposing height up to thirty feet. Some idea of the character of the piling and appearance of the yard may be gained through the photographs on the adjoining pages.

The Babcock company has a unique system of handling its lumber from the mill, the entire cut being handled by traveling cranes operating jointly with flat cars. These cars are loaded up with units of lumber of respective grades and dimensions. The cranes traveling ten or twelve miles an hour push the loaded cars down this or that track to the proper alley and pile where the entire unit of 3,000 or 4,000 feet is picked up bodily as illustrated in one of the photographs and deposited on the top of the proper pile. The operation has not been in progress long enough to get complete cost figures, but the promise is that they will be very low.

Few mountain mills are so ideally situated so far as drying possibilities are concerned. The mill is located on a high level plateau which is constantly wind-swept, and it gives positive assurance that the drying period and drying cost will be minimized. Also that the quality of drying will be the very best.

Following the inspection of the sawmill, the delegates in a body attended morning services at the Maryville College, a short distance down the tracks. This college was founded about ninety-six years ago and is quite unusual in its purpose and its ideals. The student body is in the main made up of earnest young men and young women, many of whom are paying all or part of the cost of their college education.

Following the services, President Gaskill and Judge Lindsey of Knoxville gave very impressive talks to the students.

At the conclusion of the chapel services, at 9 o'clock, the party embarked and continued the trip up the rugged course of the Little Tennessee river on the tracks of the Aluminum Company of America. This company, by the way, is going to be one of the biggest industries in the South. It is a product of northern capitalization and has selected Maryville, Tenn., as the site for its main plant. It will ultimately employ about 25,000 people at this operation. Its chief work now lies in developing power on the Little Tennessee, which work is being carried on by the Knoxville Power Company, a subsidiary. The operation will comprise a series of seven immense dams which are now under construction. The first dam, it is said, is pretty well along towards completion and will back up an expanse of water for about 10½ miles.

It is this operation which presents to the Babcock people their most interesting and serious problem. They are now logging down the Little Tennessee river to the Maryville plant over the tracks which are being utilized from Alcoa up the river to the dam for hauling materials and supplies for dam construction. The Babcock logging road comes into this road a mile or so below the present construction work on the first dam, and within two years' time the entire valley will be flooded and this road torn out. This puts directly

up to the Babcock people the problem of getting out 100,000,000 feet of timber within this period. Any of the timber that the company is now working on which is not out within that time must be left in the woods for future generations. Incidentally, this tract is but a part of the 65,000 acres which insures the splendid new mill at Maryville a cut of from twenty five to thirty years.

It might be added as a point of interest regarding the power development, that the first dam alone will develop 75,000 H. P., will be 215 feet high and 500 feet wide.

Going back to the trip; the party soon reached the Babcock bridge across the Little Tennessee river, which is illustrated in an accompanying photograph on which is pictured the train and two flat log cars with plank seats which were pulled by a Heisler up the tortuous and not too velvety logging road, running back for miles through the impressive ravines of that region. The first few ravines are devoid of points of interest to loggers as that land has been gone over and the timber taken down to the mill and cut into lumber. However, it is not long before the first of the logging camps burst suddenly into sight on rounding a sharp bend. This is typical of a series of fifteen or twenty camps stretched on up several miles of roadway. The camps so far are but rough, temporary structures made from boards cut on a portable mill at the first camp site. Incidentally, right above this site and immediately below a promontory of solid rock stretching 1,500 feet straight up over the roadway, is quite a considerable curve which is said to have a bend of about fifty degrees.

The first stop was made at the skidding operation illustrated

herewith, the picture showing a Lidgerwood overhead skidder, which is one of a unit of two machines at this particular point. The apex of the operation can be seen directly up the mountain side, which is 1,000 feet above the skidder. The line on the other side, which is equipped with a larger machine, pulls the logs up from the opposite valley and slope for 3,000 feet where they are then taken over the top and down to the logging road, which is pictured in the photograph.

After a thorough inspection of this point of interest, the train moved on up the grade for a mile or so about to the end of the road as it now exists, and where there is still evident a very large quantity of untouched timber which exhibits some splendid specimens of hemlock and hardwoods.

The trip back to the main land was made without particular incident, and the warm interior of the special cars was more than welcome after the snow, wind and cold of the mountain trip on the "flats."

One of the features of the excursion was the most excellent way in which the ravenous appetites of everybody concerned were taken care of by the luncheon tendered through the representatives of the Lidgerwood Manufacturing Company, namely, Mr. Dexter and Mr. Swan. These gentlemen had provided for a baggage car which was carried in front of the train, in which a very complete luncheon and plenty of hot coffee were served. There was more than enough to feed 200 people, but there was hardly a crumb left when the tables were folded up as the train approached Knoxville, pulling into the Southern depot at about 7:30 Friday evening.

Sales Managers Have Great Meeting

Northern Operators Show Great Interest in Work of Their Sales Forces, Who Perfect Organization

If the first essential to salesmanship consists of thoroughly understanding your goods and the where and how of their application, Wisconsin and Michigan sales managers proved at the big Bay City meeting that they are thoroughly grounded on a substantial foundation. To properly prescribe, the physician must be able to accurately diagnose—a true diagnosis can come only if he who is prescribing thoroughly understands the ailment of his patient.

Translated into lumber salesmanship terms this means that Wisconsin and Michigan sales managers must know their goods, for their diagnosis of what ails the lumber business and what is to be done about it revealed a splendid realization of what can be done for lumber and of the reasons why more has not been done in the past.

The energy and perseverance of a few men has brought about an epoch in lumbering. This statement may sound strong to some, but the one biggest opportunity for association development in lumbering lies in selling organization. The meeting was epochal because it was successful. In this instance the two words are synonymous, as an organization which is more successful in its second gathering than in its first, has proven its position—has demonstrated that it possesses the stamina and the directness of purpose which will drive it on to a successful prosecution of its aims and its work.

And not the least of the successes attained at the Bay City meeting, which by the way was held Friday and Saturday, November 16 and 17, was the solidifying of the threads of friendship and mutual understanding which began their growth at the Merrill meeting just one year before. The Bay City meeting was notable, particularly for two sentiments predominating; one, the desire to co-operate in spirit as well as in mere form as expressed in membership and attendance, in bringing to pass the aims of the congress; the other, the ever-apparent desire to consecrate men and effort, money and machinery to the nation's cause.

THE SPIRIT OF THE CONGRESS

The spirit behind the sales managers' association could not be better expressed than it was by Toastmaster H. S. Dewey, of Chicago, who officiated at the banquet on Friday evening. Toastmaster Dewey ushered out the material part of the banquet and ushered in the spiritual with the following message:

Man's usefulness does not cease with his more serious activities. Indulgence in the somewhat more frivolous pastimes for the titillation of his jaded nerves enhances his efficiency and pleasurable relief from hard work is a much desired means of relaxation.

Purveyors of wartime frivolity were in the beginning of the deadful conflict in Europe rebuked for their pursuit of pleasure. A cheerful laugh and gaiety were not deemed to be in keeping with the funeral trend of events, for the war was serious business. Today, nobody cares for the serious plays, and all forms of intellectual entertainment have been suppressed. Parisians want farces; Londoners want reviews.

There was a preacher once who joined the Actor's Church Alliance and when called upon for a sermon to explain his position, chose the text, "They have refreshed my spirit." The true American spirit welcomes the intrusion of good cheer, even in grave danger or in the face of calamity, and is not offended. The elements of gaiety and cheerfulness are as essential to our well-being as are the more sinister elements of serious business and render man a little more a man and a little less a manikin.

Inasmuch as the whole theme of the banquet was the keynote of the organization's purpose, it might be more proper to take the last first and tell of what happened around the board.

To begin with, the toastmaster made it easy for each of the speakers by introducing him in a manner which left nothing for him to do, were he so disposed, but show himself and then sit down. But refuting Douglas Malloch's assertion that the average after-dinner speaker follows a skyrocket introduction with a pinwheel speech, those who furnished entertainment put on a pyrotechnic display that would have done justice to an old-time Fourth of July celebration.

Among the set pieces in the fireworks were Douglas Malloch, of the American Lumberman, whose theme, "The Seven Sinners of Business," made a great hit; at least the theme and the way it was handled both made a hit. Al Flournoy, of the Virginia & Rainy Lake Lumber Company, Virginia, Minn., George M. Clifton of the Louis Sand Salt & Lumber Company, Manistee, Mich., Mike O'Brien of the Sawyer-Goodman Company, Oshkosh, Wis., all more than exceeded the expectations aroused by the toastmaster's introductions.

"Jim" Dewey, of the Stearns Salt & Lumber Company, Ludington, Mich., in business hours better known as James E. Dewey, also helped establish the right of that illustrious name to a position of leadership. He led the song fests between the oratorical fireworks and got the gang going in good shape on a number of popu-

lar harmonies as well as on some stuff that was especially prepared for just such gatherings of northern lumbermen. The occasion quite properly closed by the singing of "America."

WHAT THEY DID AFTER THE BANQUET

Not satisfied with one banquet, the crowd pulled off an informal affair Saturday night before train time. Most of the guests happened to file into the dining room about the same time for dinner and much to the chagrin of the Titian haired lady boss of the dining room, soon appropriated half of the dinner tables and forming them into one long board, proceeded to regale what few outsiders were so fortunate or unfortunate as to be in for a late dinner, with an hour of song and stories.

Speaking of entertainment, it would not do to overlook the smooth arrangements which George Robson had made for a stop-over of the special train at the big encampment at Battle Creek. The special returning to Chicago Saturday night reached Battle Creek in due time early Sunday morning.

The three Pullmans in the special were, to say the least, no place for a poor sport between the hours of leaving and an uncertain hour somewhere between midnight and dawn. A few poor innocents boarded the train under the mistaken impression that a Pullman ear was designed primarily as a place in which to sleep while traveling from city to city. It is quite likely that if these few honest woodsmen have not made the suggestion of sleep so obvious, everybody would have responded at an early hour to the weariness resulting from two strenuous days. As it was, the entire crowd was up in arms instantly at their temerity in attempting sleep on such a royal occasion and every man had to join the procession and help do his bit in routing out the other fellow.

The more serious phase of the trip came on Sunday morning when seventy lumbermen tramped through the grounds of Camp Custer, and inspected the result made possible through their energy and

organization. All of the lumber used in Camp Custer was furnished by northern operators, and needless to say, there was no small amount of very natural pride aroused by the inspection. This stop-over was the last feature of a meeting replete with features, with a program planned and executed in a way to bring everlasting credit upon the men responsible for the gathering, and upon the hosts in Bay City and Saginaw and eastern Michigan, who surely made every possible provision to the end that Bay City's fame might be just as lasting as Merrill's.

THE BUSINESS SESSIONS

But lest it be thought that there was no business session at all, we will proceed with what was actually done in the more serious hours of the congress.

The big accomplishment was the adoption of a proposal for permanent organization. Permanence was given to the congress by adoption of the following resolution by C. A. Goodman, chairman of the resolutions committee:

WHEREAS, The objects and purposes of this congress should be more clearly defined and appreciated by those interested in different parts of the country, were we organized on a permanent basis, be it

RESOLVED, That the necessary steps be taken and decided to effect such organization.

OFFICERS OF PERMANENT ORGANIZATION

The nominating committee was immediately appointed and reported back promptly with recommendation for the election of the following officers:

PRESIDENT George C. Robson, Knusel Lumber Company, Merrill, Wis.

VICE-PRESIDENT W. N. Wrape, Kneeland-Bigelow Company, Bay City, Mich.

SECRETARY-TREASURER O. T. Swan, secretary Northern Hemlock & Hardwood Manufacturers Association, Oshkosh, Wis.

DIRECTORS T. Hanson, Salling-Hanson Company, Grayling, Mich.; James E. Dewey, Stearns Salt & Lumber Company, Ludington, Mich.; Charles A. Goodman, Sawyer-Goodman Company, Marinette, Wis.; Ray E. McQuillan, Langlade Lumber Company, Antigo, Wis.

It was ultimately decided that membership should be limited to those affiliated with manufacturing organizations operating in

BETWEEN TRAINS AT BATTLE CREEK.

1—After their hard work, George Robson and Harry Dewey were justified in their apparent satisfaction over the outcome. 2—Waiting for No. 13 to pick up the specials. The astonishing thing about this picture is that Darke and handsome Harry Christiansen were not in the front row. 3—Nobody ever put one over on Darke, so to relieve the monotony he put one over on himself. 4—Harry Butts and Mike O'Brian in select company. The officer in the picture weighed 298 pounds when in civilian life. He now weighs 176 pounds. Mike is interested. 5—If Darke were not so modest he would know better how to pose and we might have done better justice to his poetic countenance. 6—Happy though hungry after a five-mile hike through Camp Custer.

DELEGATES TO THE SECOND ANNUAL LUMBER SALESMANSHIP

Wisconsin and Michigan; that manufacturers, salesmen and sales managers should automatically become personal members and that votes should be cast one for each company in the membership.

HE WELCOMES THE VISITORS

W. C. Hull, president of the Michigan Hardwood Manufacturers' Association, welcomed the congress with a short but pointed talk. Some thoughts from his speech follow:

Salesmanship is the dominant note of our conferences here today, and as a subject that can well tax the brains of the best of us. Selling today means a whole lot more than it did a few years ago, especially the selling of materials entering into extensive manufacturing operations, such as the lines we have for sale.

Big business men have ceased trying to know everything, and now look to specialists for specific information.

There was a time when a buyer tried to know more about what was offered him than the seller; now he is looking for the seller who knows the most about the lines offered for sale.

Salesmanship today is almost worthless as a business force unless it includes a keen analysis of the needs of the customer and the vigorous intelligent application of the goods to his peculiar and particular needs. The successful salesman is the one who can see clear through the buyer's needs and show him better methods, better processes and more suitable materials than he is using, if the possibility exists for such improvement.

Every lumber salesman must know more about the uses of wood than any consumer of wood. Every lumber salesman should be able and willing to study over the operations of his prospective customers, and must be in a position to tell those customers how to economize, and how to improve so far as wood is involved in their operation. To do this means to originate business where there was no business before, and it means to get the order where the demand is already known, but not intelligently analyzed.

Especially, should lumber salesmen give shrewd analysis to the requirements of their trade in view of the aggressive operations of wood substitutes. We must be able to justify the use of wood wherever it can be justified, and if we do this, we will more than double its consumption.

We will not be taken on faith; smooth talk will not get us by; it's up to the salesman to prove his case; to show the consumer how to get the most for his money and still use wood; to get the consumer out of the notion of thinking in wide clear boards, when narrow one face stock is better for his purpose. What the consumer thinks he wants and what he really can use are often widely different things, and the salesman's duty is to take the situation as it confronts the customer and see that he has the most suitable thing that can be furnished, and at a price that will make him come back for more.

But I digress; it is my job to welcome you; not to elaborate on a subject you all know more about than I.

The idea of the necessity of an address of welcome to our Wisconsin brethren is a joke; for they already know they are as welcome as the "Flowers in May," or as a regiment of Yankees in France, but I have a personal feeling of so much satisfaction at having with us our guests today that when I greet you in the name of the Michigan crowd I want to shake hands with each and every one of you for myself, too.

WHY THE CONFERENCES ARE NECESSARY

Chairman George Robson then told why conferences such as these are necessary.

Gatherings of northern operators, according to Mr. Robson, are necessary because both Michigan and Wisconsin lumbermen have their problems and these problems are similar. Therefore, to get together will mean that each group may help the others overcome common difficulties and the trade may be advanced to a greater extent than if each man and firm paddles his own canoe.

He said that one of the problems is to learn a higher standard of merchandising and to market northern forest products in such a

way as to bring better results to the operator and less criticism of the industry's selling ability.

The truly good results of the Merrill conference last year were touched upon and the spirit of that conference was the theme on which Mr. Robson played throughout his talk.

SOME BIG THOUGHTS ON SALESMANSHIP

Edward Hines, of Chicago, followed with a particularly able address. His subject was, "These Conferences—Perspective and Retrospective." He said:

The perspective as it is now revealed to us commends itself to the thoughtful consideration of every manufacturer of lumber and every sales manager and salesman selling lumber in the United States. There can be no division of interest in its purposes, no curtailment of its possibilities, and no lack of appreciation of the fundamental elements that shall make for the fulfillment of your splendid expectations.

Mr. Hines said that the day of individualism is past and the future will be marked by adherence to the principle of co-operation and cohesive action, and that the inaccuracies of the past must be a guide for the future.

He said: "To succeed in your work you must have an ultimate object in view—you must decide what you want and keep eternally in pursuit of your object." He laid before his audience his conception of the fundamental principles of selling and proved the greatness and importance of proper sales methods.

Touching on difficulties to be overcome, he said: "If in your organization work you succeed only in demonstrating that troublesome difficulties may be circumvented and turned to useful purposes, your progress will be assured and your work abundantly repaid."

He dwelt forcibly on the important place in selling that the modern business letter with a personality holds. He said:

"If you suggest that you can help the reader of your letter you are sure to have his attention. Tell how, and you have his interest. Prove it, and you are likely to have his signature."

He closed with an emphasis on the importance which work has in success. His thought here may be summed up in one of his sentences as follows:

"The concentrated centralization of all your best efforts to succeed in the art of selling are spelled in just one word—Work."

WHY CADILLAC IS THE CITY OF QUALITY

"How We Do it at Cadillac," was the subject assigned to Charles R. Abbott, of the Cummer-Diggins Company.

Mr. Abbott sketched briefly the history of Cadillac as a white pine center and as a city in first rank of hardwood production. This change, he said, brought Cadillac lumbermen face to face with a difficult problem which they solved only by complete co-operation among themselves and between themselves and everyone with whom they came in contact. He told of the frequent consultations between competitors in Cadillac, and of the free interchange of information. He told of the development of remarkable by-products industries, turning into profit what is normally waste. Co-operation in the

BIRD'S-EYE VIEW OF CAMP CUSTER, BATTLE CREEK, MICH.

NSHIP CONGRESS, HELD AT BAY CITY, MICH., ON NOVEMBER 16-17.

development of chemical by-products plants and accessory plants is the one thing which has made possible the building up of a successful business in these directions, as no one company would have been able to maintain such accessory organizations. This spirit of co-operation carries through all units of manufacturing in Cadillac in the lumber, in the by-products and in the flooring plants. The result is the successful defense of the Cadillac slogan, "The City of Quality."

Mr. Abbott said: "It has been said of Cadillac manufacturers of lumber that they ask higher prices than some of their competitors. To this we cannot agree. The people who buy our stock would not pay us a premium just for the sake of doing business with us. We desire to give to our customers just what they want, and when they get just what they want, they are willing to pay our price."

He went on then to describe the workings of the Cadillac Lumber Exchange, telling of the different committees, and of the interchange of stock information which makes it possible at all times to meet any prospective customer's requirements as if one man does not have it, another will, and will furnish it.

WHAT THE RETAILER THINKS OF THE MANUFACTURER

C. D. Burritt, of the Cadillac Lumber Company, Cadillac, Mich., was particularly apt in his handling of a discussion of merchandising, past, present and future.

He contrasted past methods in the retailing of lumber with the present methods, laying particular emphasis on the loose connection between the retail lumberman and the ultimate purchaser. He told of the haphazard method of designing and constructing houses that prevailed years ago, emphasizing that the only interest that the lumber manufacturer, the jobber, the retailer and so on down the line, had in the man who bought from him, was the money he was to get.

This condition began to change about fifteen years ago, according to the speaker; the change in the beginning taking the form more of improved ethics than of modern salesmanship. The retailer also began to analyze house construction, which in its turn showed signs of improvement. But still there was lacking any foundation of good merchandising or of real service.

Then came the inspiration for the big change, the big awakening. That was the introduction of the substitute. Those in charge of marketing the substitutes had selling and service ideas before they started, and have put these ideas into effect and developed them ever since.

Looking at it from the retailer's standpoint, this example seems to have been an inspiration to the lumber manufacturer, for Mr. Burritt says of the situation: "I think an apparent change has taken place, both in distribution and assistance offered by the manufacturer."

He criticized, however, the form of information which the manufacturers are getting out, saying that it is not complete enough so that the retailer can use it to drive home the idea to the ultimate buyer. He said:

"Of course, many yards have house building books, but they do not show why six-inch D. & M. stock at \$38 is better than 8 inch shiplap at \$35." He contrasted this more general information with the specific data offered by the substitute people.

Mr. Burritt said that as a consequence of lack of material, of telling points and selling data, the lumber salesman will have to expend more energy than ever to get back the business, and the delay in doing it will make the substitute man all the more successful.

Mr. Burritt, however, offered hope for the future, saying that he has noted a radical difference in selling talk. He said that the salesman seems to know something about his product, and how and when it can be used with the best result. He said though that there seems to be an inclination in lumber literature to let quality of paper and artistic effect take the place of hard facts and convincing argument, but he said further that this will be remedied when the men at the head really get together.

He dwelt then more in detail on the need of assimilating and tabulating technical and trade information on the physical qualities and the adaptability of wood in its various forms, and of getting this information broadly and as convincingly as possible before the public at large in order that the public may have a complete knowledge of the many purposes to which lumber exclusively is suited. He closed by saying that when the manufacturers have established their right to retailers' co-operation, they will find the retailer ready, but if the manufacturers do not make good, the retailer must look for his livelihood to the sale of substitutes.

The congress was here fortunate in being able to listen to a short but pointed talk by William Woodward, of the Curtis Publishing Company. Mr. Woodward gave an impromptu talk as he just happened to be in Bay City on the day of the meeting and accepted an invitation to address the congress only about a half hour before it was time for him to appear. The thought he left with his listeners was that the future of their business is up to them. That the first essential in properly merchandising any commodity is a full and general understanding of just what the commodity is and what it is good for. That when the merchandisers have this knowledge they can spread their propaganda with it as a basis, but that if a merchandising campaign is attempted without specific knowledge of the product to be sold, that campaign is foredoomed to failure.

J. B. Crosby, of Chicago, talked on "Moulding the Demand," his talk being a general analysis of the fundamentals which constitute salesmanship.

THE CAMP PARTIALLY FINISHED. SHOWING THE TYPE OF CONSTRUCTION.

A. J. GILBERT'S RETAILER'S IDEAS

He was followed by Robert K. Jardine, of Grand Rapids, Mich., who told of the retailer's viewpoint in lumber purchases. He spoke in part as follows:

Each community has its peculiar trade requirements; what can be sold in one district can not be disposed of in another, and consequently the retailer buys for his particular requirements and his inspection, therefore, is based.

So long as mills will not stick to uniformity of grade, just so long will trouble exist between the retailer and manufacturer on inspections.

The average retailer buys from a mill whose salesman tells him he has exactly the stock for this particular yard and regardless of the wording of the sales ticket and acknowledgment expects exactly what the salesman told him he had.

For example, in one district the trade expects for a No. 1 common yellow pine board or flooring practically clear stock; for No. 1 hemlock expects No. 1 and not merchantable; and has been educated to that expectation because a few mills furnished the retailer a superior grade, and after a while he demands stock better than the grading rules call for. Imagine his situation if the mill he buys from suddenly decides to abide by the grading rules.

If your association can devise some way of standardizing grades shipped so that the manufacturer would refuse to ship degraded or questionable stock, as well as to refuse shipment of stock superior to grade, one great evil of the trade would be eliminated and the retailer would then have no excuse for shopping around.

The Friday afternoon session was then adjourned.

Saturday's Session

The Saturday morning session opened with Charles R. Abbott in the chair.

RELATIVE VALUES OF SELECT GRADES

W. L. Martin of Boyne City, Mich., told of the "Evolution of Hardwoods in Michigan," and dwelt particularly on the merits of the grades of "selects" and its value.

He told of the time, when twenty-five years ago operators in cutting maple, would cut around the log throwing out the heart, squares from 4 to 12 inches square, these being cut into firewood. At this time hardwoods were sold mostly as No. 2 common and better, or merchantable hearts out, or log run hearts out, or hearts measured out. He told of the evolution of grade development necessitated by the specific needs of different manufacturers who required a definition of the stock that they used. This led up to the formation of the National Hardwood Lumber Association, after which the development of hardwood grades began in all its glory. The purpose then, as always, was to define and admit such boards as experience found could be used to advantage by the majority of the customers requiring certain grades.

Mr. Martin gave some interesting figures on lumber values in the old days, naming such prices as \$15 for FAS maple; 10 for No. 1 common. He said that a cargo of thick maple was shipped to Racine eighteen years ago at \$14 delivered. He then went on to sketch development leading up to present inspection and marketing methods, and turned to a discussion of conservation. His argument was that one crop of potatoes raised on former forest lands in Michigan will produce more than the timber which it took three or four hundred years to raise on that same land. He said that the country should conserve its timber and cut only what is actually required for immediate use.

Referring then to tests on relative value of the grade of "selects," Mr. Martin read the two following very interesting letters:

Your letter of the 27th, in reference to relative value of the select grade, we are of the opinion that in taking this select grade out of the No. 1 common in basswood, birch and maple, it would take about 40 per cent in basswood, 30 per cent in birch and about 25 per cent in maple. Taking the October 1 list as a base, think a spread of \$6 in the grade of FAS and select and \$5 in select and No. 1 common, with the No. 2 remaining as it is, but with the choice No. 2 developing in shipping, No. 2 stock \$3 per thousand more than the regular 4/4 No. 3 price and "for basswood."

Would apply this average of \$3 also in 5/4 and 6/4, but in 8/4 and thicker stock make this choice No. 3 \$10 per thousand less than the choice No. 2 common. In birch, make 4/4 FAS \$50, selects \$40, No. 1 common \$35 and No. 2 common \$25, with this ratio of price prevailing in all thicknesses. With the 4/4, 5/4, 6/4, 7/4 and 8/4, No. 3A developing in shipping, No. 2 common and better \$3 per thousand more than the straight No. 3 common price. With the choice No. 3 common developing in 10/4 and thicker \$30 per thousand less than No. 2 common price.

In regard to maple, think that our list is a little bit confusing, but suggest under 4/4, first pricing only FAS and select No. 1 common, 5-inch and wider, 6-feet and longer, making these prices \$49 and \$41. Then under 4/4 flooring stock, have the four grades selects, Nos. 1, 2 and 3A, with the prices \$39, \$31, \$26 and \$18 per thousand, respectively. With 5/4 and thicker stock, selects \$7 per thousand less than FAS, and \$7 per thousand more than No. 1 common. With the No. 3A developing in 5/4, 6/4 and 8/4, No. 2 common and better \$3 over the regular No. 3 common price, and with the same stock developing in 10/4 and thicker, \$30 per thousand less than the No. 2 common price. In shipping flooring stock from all this northern country anywhere from 1 1/2 to 3 per cent of FAS develops, also 6 to 12 per cent No. 3 common. We think that by making a definite distinction between 4-4 No. 1 common and better, and 4-4 flooring stock, it simplifies matters. We think the grade of selects

is very necessary, as we know that in shipping out good lumber with a national man on the pile, he invariably gives us the worst of it on stuff between No. 1 common and FAS. This would take care of this and tend to make our grades more uniform.

Letter No. 2.

I am pleased to acknowledge receipt of your communication of October 27th, and note that you are going to discuss the subject of "the selects grade" of hardwood and its relative value at the Northern Lumbermen's Salesmanship Congress to be held at Bay City, Michigan the 16th and 17th of this month, and while from the fact that it is just recently that we started to put up some of this grade in the yard, I am possibly not in a very good position to give you much information. I would state, as far as we have gone, we have found that it cannot help but result to our advantage.

The ordinary grade of No. 1 common, as we have been previously putting it out, would probably produce of this new grade all the way from 25 to 40 per cent, also the grade of No. 2 common would possibly develop from 10 to 15 per cent, and when you can get a relative increase in value of from \$10 to \$20 per thousand, there is no question, of course, as to the ultimate benefit, and bear in mind at the same time it is our opinion that we cannot see as the selection is practically detrimental to the No. 1 or No. 2 grade, that is, for the ordinary purpose of a cutting-up nature for which these grades are sold.

In our own particular case here we are simply experiencing on the 4/4 inch thick stock and in birch only, only cutting small quantities of basswood and maple—we have not decided to experiment on these woods as yet. Of course, there is another feature in connection with this grade, and that is that it is practically a sash, door or interior trim product, and naturally, as there has been very little business with this class of trade for the past eight or ten months, we are not any of us in a position to determine just how the consumer is going to take to the stock, and especially with reference to the price he will pay for it.

He gave the following as results of actual tests so far reported on this grade:

OLD RULES.	NEW RULES	Selects
872 ft. 6/4 FAS maple.	867 ft. 6/4 FAS No. 1 com., 35 1/3 %.	
11,441 ft. 6/4 No. 1 com.	4,145 ft. 6/4 selects, No. 2 com., 3 4/10 %	
2,976 ft. 6/4 No. 2 com.	7,277 ft. 6/4 No. 1 com., selects.	
	2,870 ft. 6/4 No. 2 com.	
15,289 ft. total.	15,159 ft. total.	
12,243 ft. 4/4 No. 1 com. maple.	4,129 ft. 4/4 selects, No. 1 com., 33.4 %.	
7,681 ft. 4/4 No. 2 com. maple.	8,239 ft. 4/4 Nos. 1 and 2 com., 0.2 %.	
2,236 ft. 4/4 No. 3 com. maple.	7,663 ft. 4/4 No. 2 com., selects.	
	2,233 ft. 4/4 No. 3 com.	
22,160 ft. total.	22,264 ft. total.	
17,034 ft. 4/4 No. 1 com. maple.	3,567 ft. selects, No. com., 20.3 %.	
4,596 ft. 4/4 No. 2 com. maple.	13,567 ft. No. 1 com., No. 2 com., 0.2 %.	
471 ft. 4/4 good face No. 3.	4,496 ft. 4/4 No. 2, selects.	
558 ft. 4/4 regular No. 3 com.	471 ft. good face No. 2.	
	558 ft. 4/4 No. 3 com.	
22,659 ft. total.	22,659 ft. total.	

Average of above 28.5 % of No. 1 common grades selects.
Average of above 1.4 % of No. 2 common grades selects.

The last test, however, he said is not a fair average as some of the best common has been put with FAS. He said that in inch maple about 30% of common will grade selects, but that in 2- or 3-inch this percentage will be much larger. In speaking of the consumer's viewpoint, he said:

We believe the consumer when he becomes familiar with the selects grade will find that for all practical purposes the selects grade will be equal to seconds. As to price, it has been suggested that in all woods, except birch, the selects should be at a price half way between FAS and No. 1 common, and the No. 1 common left where it is.

Whose Ox Is Gored

H. H. Butts of the Park Falls Lumber Company, Park Falls, Wis., spoke on the subject, "Whose Ox Is Gored." He dwelt mainly on the question of terms of sale and told of the work done by the National Lumber Manufacturers' Association on revision of terms which will be adopted nationally when approved by nine of the eleven affiliated bodies. He recited the proposals and then listed the benefits that will be derived both by the shipper and the purchaser by their general adoption.

Mr. Butts was followed by O. T. Swan, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, who gave some very interesting data and figures on the relative strength of hemlock and hardwood. He emphasized the need for a more thorough understanding of these questions in these days of rapid fluctuations in markets for different woods.

This concluded the Saturday morning's session.

Saturday Afternoon

Secretary J. C. Knox of the Michigan Hardwood Manufacturers' Association, opened the Saturday afternoon's session with a short talk on the Michigan conception of the Merrill conference, and was followed by Enos Colburn of Green Bay, Wis., whose subject was "The Salesman's Viewpoint."

Mr. Colburn, who is in the commission business, criticised many of the methods of manufacturers, and said that with present methods of selecting men for selling positions and of giving recognition to the importance of the sales department, either in a pecuniary way or otherwise, little progress could be made. He maintained that

the salesman's efficiency can be greatly increased if he has the confidence of the sales manager, and in turn the sales manager's efficiency can be brought to a much higher plane if he enjoys the full confidence of his employer.

S. S. Stewart of the W. S. Stewart Company, Flint, Mich., gave some pointed reasons why lumbermen should make over some of their methods of handling consuming factory business. He told of conditions just as he sees them in the daily experience of the purchase of lumber for body work. Mr. Stewart so expressed himself that his criticism was taken in good part by the manufacturers who undoubtedly will profit by what he told them about themselves.

He made the following interesting statement:

Primarily, of course, the buyer should know well in advance what his requirements will be, and the salesman should be so well grounded in the detail of grade and method of manufacture that he can study the buyer's requirements intelligently, continually searching for substitute grades of woods, which will meet the buyer's requirements and still answer the question, for the salesman who can suggest a substitute of this kind establishes a personal reputation, which, when re-enforced by the shipping of consistent grades by the producer, is a mighty valuable asset to both.

Mr. Stewart also made the statement that in the opinion of a big buyer in his acquaintance his chief criticism of the average salesman's ability was that he does not know his stock, that is, as to grade, texture characteristics such as ranges of strength, and kiln drying properties, and also covering car and rail conditions which may affect the delivery of the product.

THE MANUFACTURER'S IDEA

Speaking on the question of merchandising from the manufacturer's standpoint, Charles A. Goodman of the Sawyer-Goodman Company, Marinette, Wis., spoke in part as follows:

In order intelligently to supervise the manufacture of his stumpage the manufacturer should, first of all, have some knowledge of the requirements to which his product, if properly manufactured, may conform.

Each manufacturer of hardwood lumber should study the needs of the consumers in his most available markets. When he knows who uses the various grades and thicknesses of such hardwoods as he manufactures, then a further study of the size and quality of his own timber would enable him to decide what class of material can be produced from his logs to the best advantage. Putting lumber into pile without any object in view, except to see how much the mill can cut, is wrong. There should be an attempt made to forecast the market. If it is known what lumber is to be used for, then some attempt can be made to saw the logs to meet the needs of the consumers.

This, then, is the province of the sales manager, not only to sell the product of his mill, but to advise his mill how to cut the logs and saw the lumber. He should endeavor, as far as possible, to see that the lumber he is to sell has been sawed so that he can sell it. He will get this information in endless ways. Mainly, he must depend on his own knowledge of the trade requirements in the territory he expects to serve. He will gain this by personal visits, by correspondence and thru his salesmen. The manufacturer should, wherever possible, follow up the work of his sales manager by making personal visits to customers and securing their confidence, thus not only laying the foundations for a mutually profitable continuance of trade relations, but often leading to life-long friendships and always to a broader knowledge of the possibilities of his own business.

I can foresee that before we go into this very far we will be asked to furnish statements showing the average fair cost of hardwood based on the reasonable values for stumpage. If the Government needs a large amount of northern hardwoods, and we are unable to produce reliable cost sheets, the Government will make up cost sheets for us on the basis of its own investigations. Now, the question is whether we would not rather make up our own cost sheets than have the Government investigators make them up for us. They would need to secure the data from us in the first place and necessarily their sources of information would be limited to the few people with whom they would come in contact, and the results, hastily arrived at, would not be properly representative and equitable.

Each of our associations is getting out cost sheets and I understand a joint cost sheet is promised. It seems to me we should go further than this and have some sort of a clearing house for stock that a seller is desirous of moving and which he has no immediate prospect of selling at a fair price. Very often these extremely low prices are quoted on stock which some other mills are refusing orders on because they can not furnish. I believe the wholesalers as well as the mill men could make some arrangement that would not only work out to their profit but would go a long ways toward preventing unnecessary demoralization of the market.

Finally, it is bad policy to be in too much of a hurry to sell your lumber. Do not try to force it on to your customers before they want it, as that only makes them think that there is a surplus of the very items they are using. Everything that you make in the way of lumber will be needed if you are satisfied to let it wait its turn, and in the meantime make some intelligent effort to find out who will probably use it, when they will need it, and what it is worth.

FROM A WHOLESALER

He was followed by E. M. Holland of the Cartier-Holland Lumber Company, Grand Rapids, Mich. The strong points in Mr. Holland's talk follow:

A great many also are connected directly or indirectly with the manufacture as well as the sale of lumber. Furthermore, the successful wholesaler must know the manufacturing end of the business before he can properly market the product. Many times in my short experience, I have had the good fortune to meet some of the old-timers, those who have made history in lumber manufacturing, and they have said to me: "Why, he used to work for me in the woods—

worked all the way up to head salesman—decided to shift for himself—is making good."

The average sales department has been considered a necessary evil, sort of department created for the movement of lumber and has usually been paid about one-half of what should have been paid for an efficient sales department. Small salaries have been in vogue ever since this necessary evil was created, and have affected every one in that department from the sales manager down.

It has always been the custom to market lumber at the lowest possible cost, whereas, liberal expenditures of money have been made to secure production efficiency. The sales managers of today and in the past have been tied down to their desks with oodles of details, so I can safely say that not one in a hundred knows his customers personally, and if he does, nine times out of ten the customers have found him in his own home town.

Another point is that the amount of money paid to sales forces keep them from being stars, and if by chance a star is developed, it is next to impossible to secure compensation commensurate with services rendered. The average sales manager will generally sour, go to seed or break into the wholesale lumber business.

A while ago a representative of one of the large manufacturing concerns in the west called at my office to sell me some boards. His price was about \$3 per M higher than a similar kind of material produced in our section of the country. I advised him that his price was considerably higher, and asked him why I should pay a premium for his stock. He replied by saying that it was pretty hard for him to sell his stock in this territory as his price was so much higher than his competitors', and he could think of no reason for this condition, excepting that the freight rates were so high. Gentlemen, he did not know that his grades were nearly \$5 per M higher in quality than the stock from our own section of the country.

The other manufacturers who do not maintain sales forces, sell their product during their leisure hours, or when the spirit moves, generally paying very little attention to the selling or to whom sold, as long as the lumber was moved to make room for some more lumber to be cut and so on until all the trees are gone. The men who manufacture the lumber generally are their customers to come and look it over. They do not know themselves what they have in pile, how it will grade, average widths and lengths, etc., yet they expect their customers to look at the outside of the piles and figure it out for themselves.

The wholesaler's turn for criticism comes next. Unfortunately, there seems to exist three classes of wholesalers, the first-class, the cheap class and the third-rater.

The first-class, as I have stated above, takes and deserves the credit of being the best salesman and market maker the industry has. Note particularly that I say "Market Maker." Every opportunity is open to him. He is generally located at or near the great consuming markets, where he is in close touch with the consumers' requirements. He is accessible to the consumers at what is known as the psychological moment, the time when the customer needs something quick, and delay means more than costs. He knows just what the consumer wants, when he wants it, and takes opportunity to see that he has, or is in touch with the particular article required.

When he employs salesmen, he employs the best as a general rule, or does this part of the work himself. There is nothing to be ashamed of in selling lumber. In fact, if one can sell it instead of give it away, he has mastered a trade worth while.

The average first-class wholesaler has adequate capital to discount his bills. The rare kind that sell the product for just what it is, and you can depend upon them to get the highest market prices, and deliver the goods. When I say deliver the goods, I mean a great deal. It applies to "delivering" to the manufacturer of the said goods, as well as to the ultimate consumer. You will find the relations existing between the first-class wholesaler, manufacturer and consumer are generally most pleasant. Those of you who cater to both the wholesale and consuming trade can count on the highest type of competition.

The consumers are, of course, the real goal toward which we are working, and they depend on our giving them one of the many raw materials used in the manufacture of their product. You must bear in mind that the manufacture and sale of their own product requires the major portion of their time so that the buying of lumber is of necessity somewhat neglected, especially where the owner and general manager is also the purchasing agent of all supplies.

Very often industrial concerns are obliged to hire inspectors whose sole knowledge of inspecting has been picked up by reading the rule books, learning something about measurement and then bluffing themselves thru as inspectors.

Some of the large industrial consumers employ strictly lumber purchasing agents, young men taken from the offices of either manufacturers or wholesalers. It is unnecessary for me to make any comment on the latter. The three types mentioned constitute what has been in my observations, the three kinds of industrial consumers.

You can readily see that the first two mentioned are those most imposed upon. Very few have ever had an opportunity to learn anything about the manufacture or grading of lumber. Consequently, the only point left for them to consider in buying their lumber is the price. You can easily see that with conditions of this kind existing, it is possible for those wholesalers whom I have termed as third-raters, to sell their doctored grades and inflated scale at lower prices and get away with it, by posing as the consumer's friend.

Other speakers of the afternoon's sessions who were not on the regular program were Mr. Putnam, director of publicity of the Southern Pine Association, who urged that all lumbermen get behind the movement for increasing home building and told of some of the big things the southern pine association is doing and is about to do, to the end that wood as wood may be given broader markets; Bruce Odell of Manistique, Mich., and Roy H. Jones. Mr. Jones has just been appointed manager of the newly opened Washington (D. C.) office of the Northern Hemlock and Hardwood Emergency Bureau. Mr. Jones will be sort of a watchdog on the lookout for long specifications and to seize upon every opportunity to secure government markets for northern woods where those woods are suited.

There followed reports of the resolutions committee and other committees as previously noted. The meeting then adjourned.

Hitting the Sawdust Trail

Here and there I find that some good institution which happened to have a particular class of lumber that the buyer wants, loads practically every car to the top of the roof. I saw a carload of gum the other day that sold for \$1,100, and heard of a burl of walnut that sold for \$7,500. In printing a picture of the carload of oak on the Anderson-Tully Company yard at Memphis, which contains 26,000 feet of 4/4 or 8/4, showing that lumbermen are co-operating with the railroads in loading, and they should. This burden isn't only due to the Wall street end of the railroads. Without the co-operation of all shippers, it is impossible to get the most in the car and thereby minimize the waste of shipping room, and then it's up to the railroads to get enough engines to do away with this obsolete method of moving the cars seven or eight miles a day. Shippers in general are coming through in great shape. It is up to the roads to equal their records.

It is very gratifying to drop into the various offices and yards and see how enthusiastically the lumberman has taken to this suggestion of co-operation with the railroads. Now, in discussing with the President's railroad committee how to assist the railroads to get equipment, add to the terminals and eliminate the waste motion, they have assured him that the railroads are doing everything they can under existing financial conditions. That is, they do as far as it goes, but if the I. C. C., after hearing the present case of fifteen per cent advance asked for by the eastern lines, admits the justice of these demands or meets them half way, there certainly should be a string on the railroads that would make it necessary that this extra freight rate be put into new equipment and terminals, and not be paid in back interest. And, while they are financiers, they have in times past put the money in air instead of into equipment, or upkeep or the construction of new miles of trackage.

Every lumber committee that has been before the lumber com-

mission for the hearing has protested against the advance, and I am inclined to agree with them. But if the government's needs are not more than two-thirds satisfied, if the fifteen per cent for one or two years is given the railroads by the commission, maybe it will accelerate the movement of commerce which will naturally be held on the side track or along the right of way of railroads in almost as severe a degree as the millions of tons of munitions and other materials that have been shipped to Vladivostok it would practically cripple that long, single track which is still owned by the Russian government.

I met P. L. Ryan of Lufkin, Tex., the other day. He was worked up to the highest pitch. His mill was shut down on account of lack of cars, and he was leading Secretary Townshend a merry chase in order to get the little fellow's influence to get the car to him so he could get his logs and ship some lumber. I suggested to Ryan that he wasn't the only fellow who is in that fix—that there are a lot of them right in Memphis. But that didn't make it any less important, and as the days go by and absorb the beautiful sunshine and wonderful weather of the fall and we get the rainy season, as Robinson Crusoe "dubbed" it, there will be a lot of Ryans dashing around to the superintendent of transportation and everybody else, from the Lord down, to keep goods moving and business going.

Therefore, the particular need of every man sanely facing every problem of keeping his to measure up and work like the old fellow himself, in order to keep the commerce of the country moving. Not only because Uncle Sam needs the money, but every institution that permits its business to go democrat will find their cash means getting at a lower ebb, thus affecting the whole people, including the army's needs and support, and laying of the residue of a thousand of the members of the merchant marine that Uncle Sam needs.

E. H. D.

26,000 FEET OF OAK ON CAR. YARD OF ANDERSON-TULLY CO., AT MEMPHIS, TENN.

New Southwestern Association

At Hotel Bentley, Alexandria, La., November 17, the Southwestern Hardwood Manufacturers' Club was organized with twenty members, principally from Texas and Louisiana. Albert Deutsch, president of the Sabine River Lumber & Logging Company, Oakdale, La., was temporary chairman. The officers and board of directors were chosen as follows:

PRESIDENT, Albert Deutsch, Oakdale, La.
FIRST VICE-PRESIDENT, George W. Cleveland, Jr., South Texas Lumber Company, Houston, Tex.
SECOND VICE-PRESIDENT, Ferd Brenner, Ferd Brenner Lumber Company, Alexandria, La.

THIRD VICE-PRESIDENT, A. L. Boynton, Boynton Lumber Company, White City, Tex.

BOARD OF DIRECTORS: To serve one year—A. O. Davis, Beaumont, Tex.; J. B. Robinson, Pelican Lumber Company, Mounds, La.; G. V. Patterson, Alexandria.

For two years—H. G. Bohlsson, New Caney, Tex.; J. T. Holloway, Huie-Hodge Lumber Company, Hodge, La.; Dr. W. T. Smith, Smith Lumber Company, Wildville, La.

For three years—Philip A. Ryan, P. A. Ryan Lumber Company, Lufkin, Tex.; W. D. Brewer, Brewer-Nienstedt Lumber Company, Miltonberg, La.; Rex H. Browne, Beaumont Lumber Company, Beaumont, Tex.

A. O. Davis of the Sabine Tram Company, Beaumont, Tex., was elected secretary.

The next meeting will be held at Beaumont, Tex., February 23.

A small assessment, based on thousands of feet of lumber, will be assessed. It was the expressed belief that after the club's machinery has been set going, the assessment will not exceed two cents per thousand feet a year. The purpose of the club is "to promote the welfare of the hardwood and cypress manufacturers and to improve the methods of manufacturing, handling and marketing lumber." National rules of grading and inspecting will continue in use as heretofore. Meetings will be held quarterly. Members are expected to report stocks and sales.

A number of persons joined in discussions of live topics which came properly before the club. Among such speakers were W. M. Stark of the American Column & Lumber Company, St. Albans, Vt.; F. B. Larson of the Southern Hardwood Traffic Association, and President Deutsch.

The report of the committee on by-laws was read by G. V. Patterson. The committee on membership consists of Messrs. Patterson, Cleveland, and Davis.

It was decided to give close attention to traffic work.

A committee composed of R. C. Witbeck of the Ferd Brenner Lumber Company, Alexandria, La.; A. O. Davis of the Sabine Tram Company, Beaumont, Tex., and C. A. Weis of the Alexandria Coopersage & Lumber Company, Alexandria, La., was appointed to canvass the hardwood mills in this territory to determine what stocks are available for immediate shipment to the government.

Following are the charter members:

Boynton Lumber Company, White City, Tex.; Smith Lumber Company, Wildville, La.; H. G. Bohlsson Lumber Company, New Caney, Tex.; South Texas Lumber Company, Houston, Tex.; Beaumont Lumber Company, Beaumont, Tex.; P. A. Ryan Lumber Company, Lufkin, Tex.; Ferd Brenner Lumber Company, Alexandria, La.; Huie-Hodge Lumber Company, Hodge, La.; Boyce Lumber & Realty Company, Boyce, La.; Pelican Lumber Company, Mounds, La.; Alexandria Coopersage & Lumber Company, Alexandria,

La.; Pugh, Hess, Lumber Company, Billedeau, La.; Crandall & Brown Cypress Company, Pearl River, La.; Baldwin Lumber Company, Baldwin, La.; Jeffris Lumber Company, Jeffris, La.; Scotland Lumber Company, Ravenswood, La.; Brewer-Nienstedt Lumber Company, Miltonberg, La.; Little Lumber Company, Colvin, La.; Sabine Tram Company, Beaumont, Tex.; Sabine River Lumber & Logging Company, Oakdale, La.

Valuable Data on Oak's Future

Illustrating what lumber or veneer merchandising really means, HARDWOOD RECORD is privileged to publish a letter and data from the offices of the Evansville Veneer Company of Evansville, Ind. George O. Worland, secretary-treasurer, addressed 700 copies of the following letter to representative woodworking factories, he being anxious to make plans for the future of his business:

There has been a general decreased demand for quartered oak veneer, until some plants have decreased their production, or quit its manufacture altogether.

We are extensive producers, and, in fact, specialize in this particular line, and it is now necessary that we get facts as to conditions and causes that we may adjust our organization as to its future conduct. We have been in the trade for thirty years, and have seen quartered oak come and go several times, but it always comes back, and we have a great deal of faith in its future. Quartered oak has fluctuated in price less than any

of the finer cabinet woods, and, in fact, quartered oak veneer is selling for less money than it did twenty years ago and has not varied more than three dollars per M. in ten years past.

We are anxious to have your views as to the prospects of the future of this wood in your business, and would appreciate your expression in the form of a letter, accompanied with the return of the attached sheet with questions answered.

It will help us a great deal to determine our future policy, and we will be pleased to give you the final analysis determined from the replies to seven hundred of these letters which we are sending out.

The following is a digest of the information revealed by replies to this letter.

Of the total number reporting, 43% reported a decrease in the use of quartered oak veneers; 53% reported no decrease; 4% reported an increase; 38% anticipated an increase; 50% do not anticipate an increase; 12% expressed no opinion on this question; 61% desired an increase; 18% do not desire an increase; 21% are neutral on the subject. From this it would not seem that quartered oak is hopeless.

The main reasons why those desiring an increase in the use of quartered oak feel that way is because of the assured supply and staple prices and substantial goods offered in quartered oak. Quartered oak has not felt abnormal inflation due to any great use in war work. In other words, it has maintained itself strictly on the basis of a normal demand. In addition the supply of quartered oak is more easily controlled than is the supply of its competing woods, and there is no fear of exhaustion of production or fluctuation of prices.

Mr. Worland says about the styles of oak furniture:

The public buys what is offered it and is now buying mahogany and walnut because it was offered to it in new and attractive designs. Therefore it is the opinion expressed by a material number of our correspondents that if quartered oak were offered to the trade with the same attention to artistic design, the same care in inspection and the same skill in finish, the public would welcome it for they know and appreciate oak and are its real friends.

ALBERT DEUTSCH, PRESIDENT.

A. O. DAVIS, SECRETARY.

The Mail Bag

B1144—Gum or Southern Softwoods

St. Albans, W. Va., November 14. Editor HARDWOOD RECORD: We are in the market for 100,000 feet 4 4, 5 4 and 6 4 No. 2 common gum or other softwood, delivered at our plant at St. Albans, W. Va., and would consider in receiving quotations delivered on that basis.

B1145—Cherry Wanted

Providence, R. I., November 15. Editor HARDWOOD RECORD: We see in your issue of October 24 reference to some very choice cherry that had been unloaded recently. We thought you might possibly help us to locate some of this wood. We want about 15,000 feet 5 4 No. 1 common and possibly 1 2 cars 5 4 No. 1 common, old growth.

B1146—In the Market for Locust

New York, N. Y., November 17. Editor HARDWOOD RECORD: We are in the market for 100,000 feet 4 4, 5 4 and 6 4 log run locust, eliminating mill culls. Shipments to be made about one car every two weeks. If you know of any lumber concern who can handle a part, or all, of this order will you kindly favor us with its name?

B 1147—Poplar Sought

New York, N. Y., November 20. Editor HARDWOOD RECORD: We are in the market for a number of cars of 4 4 No. 3 common poplar, 1928. We have written to a number of your advertisers, but have been unable to get any of this stock. We want this delivered on a New York rate to a non-embargoed point.

Clubs and Associations

Oak Association Supports Government

The executive committee of the American Oak Manufacturers' Association, at a recent meeting held at Memphis, adopted the following resolutions:

Be it resolved that the American Oak Manufacturers' Association offers the wholehearted co-operation of its membership and the entire facilities of this association to the Southern Hardwood Emergency Bureau to the end that the government may secure promptly all its hardwood requirements in the successful prosecution of the war.

Immediately following this action, a copy of the resolutions was wired to R. H. Downman, director of lumber, raw materials division, Council of National Defense, Washington, D. C.

Indiana Annual

Dan, Wertz of Maley & Wertz of Evansville, Ind., was in Chicago the other day, and reported that on November 20 at a meeting of the board of directors of the Indiana Hardwood Lumbermen's Association, he had made arrangements for the annual pow-wow of the present generation of lumbermen doing business in Indiana and the boys who left for other parts and are operating in hardwoods in the East, and the South and other sections of the United States. They selected Thursday, January 24, as the date and the Claypool hotel, Indianapolis, as the meeting place. As usual the annual dinner will be a revival of the friendly exchange of information and good fellowship that has kept this organization alive. The business session will as heretofore be addressed by some prominent Hoosiers.

National Exporters' Meeting to Be Held in New York

The annual meeting of the National Lumber Exporters' Association will take place in New York January 23 and 24, 1917, a large majority of the board of directors having expressed themselves in favor of that city because of the conditions brought about by the war. In view of the importance of the many questions certain to come up for consideration, it is thought that the attendance will be unusually large and exceptional interest will be manifested in the proceedings. The numerous grave problems confronting the members require not only the ripest judgment, but close co-operation and harmonious action. It is felt that anything done by the exporters as a body will be far more effective than if the exporters undertook to accomplish the same thing singly. Officers will be elected, and a long report is expected from Frank Tiffany, the foreign representative, in regard to what he has done in the way of facilitating the foreign shipments.

Hardwood Manufacturers' Big Annual Coming

The Hardwood Manufacturers' Association of the United States has adopted February 5 and 6 as the dates for its annual meeting at the Hotel Sinton, Cincinnati. The board of directors of the association held a meeting on November 21 in Cincinnati in order to prepare and work out an interesting program.

A report of the open price organization and illustrations of their work and specialty data from individuals in the work will be brought out at the annual. Gen. Boyle of Kansas City, Mo., will give an

address touching the legality of the work of exchanging information and ideas and transactions and other data that is pertinent to the needs of any manufacturer of hardwood as often as he can get it. This information will be presented to the meeting in reference to the hardwood trade with the government and the government with the hardwood trade.

There will be no long-winded welcoming addresses or memorial addresses at these sessions, but there will be snappy, pertinent data delivered by good speakers.

This meeting generally means the bringing together of 600 to 700 operators and those interested in the hardwood trade, and the work of the organization has been so beneficial under the present management that this attendance should be doubled.

Frank R. Gadd, assistant to the president, is making a very active campaign to assist the hardwood manufacturers in working out their problems. Having been an executive of a manufacturing institution he knows the need of this data and is capable of putting it in most advantageous form. His report will be full of suggestions for the next year's councils.

The association has had a very nice increase in membership and the board of directors feels very much encouraged for an active year in 1918.

Lumber Talks by Old Timers

The Lumbermen's Association of Chicago held a meeting and luncheon November 22 in the association's rooms in the Lumber Exchange building, Chicago, and the trend of the addresses followed back to old times. The meeting was in charge of C. B. Flinn of the Metropolitan Lumber Company, and the leading speaker was Perley Lowe, an ex-president of the association, and identified with the lumber business in Chicago in early days. He came west from Maine after the Civil war, in which he served in the infantry, and has been in Chicago ever since.

Mr. Lowe referred to the fact that it was once considered preposterous in Chicago that any one should want to buy hardwood. Those were the days when white pine held the field against all comers. The business was then transacted differently from present methods. One difference was that lumber came to this port in schooners, and when a buyer wanted to replenish his stock he visited the schooners in the harbor and bargained for what he wanted. Mr. Lowe related that among his first duties in the business in Chicago was to keep an eye on the lumber schooners and locate just what was wanted and then inform his employers where and at what price it could be had. Sometimes it was no small job to keep track of all the loaded boats; for Mr. Lowe remembered by counting 165 in the Chicago river on a single morning. At that time it was the custom for Chicago lumber yards to pay fifteen dollars a foot for the space they wanted.

The calls for a talk from Robert L. Henry, one of the veterans of the Chicago lumber trade, failed to induce him to break his lifelong custom of making no speeches. He explained that he was seventy-two years old and having never made a speech, he considered it inadvisable to begin at this late day.

A request made of Col. Walter R. Robins for a leaf from his book of reminiscences elicited from him an interesting talk, beginning with the Civil war. He was from Maine and was a cavalry officer who was at Appamattox and enjoyed the distinction of having fought an hour and a half after Lee surrendered. Col. Robins directed his remarks more to military affairs than to lumber. He has taken an active interest in universal military training and he explained certain amendments which he expects to see introduced in the next session of congress, providing for the training of all young men for the army. He believes that this should be done, whether there is to be more war or not; for the training will be worth all it costs, even if hostile guns are never fired. It will make more efficient men, and they will be worth a great deal to the country and will raise the standard of citizenship.

Stock Shortage Revealed at Memphis Meeting

The members of the open competition plan of the Hardwood Manufacturers' Association, during their meeting at Memphis, November 19, agreed that stocks of oak and ash were considerably broken and that hardwood holdings, generally, were below normal for this time of the year. Stocks were checked with particular reference to determining the quantity available for use in filling government orders, and while no action was taken at the meeting pledging support and co-operation of those taking part therein, it was quite clear that all who participated stood ready to co-operate with the Southern Hardwood Emergency Bureau with a view to enabling the government to secure all its hardwood lumber and timber requirements.

There was considerable discussion of the outlook for production, too, and it was agreed that the shortage of labor, the lack of adequate transportation facilities for handling logs to the mills and other handicaps made the outlook for hardwood output anything but encouraging. The labor shortage is the greatest in the history of the country and the car shortage is so acute that many mills are already forced either to close down entirely, for the time being, or to operate only intermittently. It is therefore considered necessary that, if the government is to be supplied with the hardwood lumber and timbers it must have, production will have to be speeded up and this can come, according to those present, only through a radical increase in the amount of flat equipment for handling logs.

The question of shipping lumber is largely a matter of whether one

is trying to ship to private industry or whether one is selling to the government or some industry that is producing something regarded as essential to the conduct of the war. Restrictions are being thrown around the shipment of lumber intended for non-essential industries and most members of the open competition plan just now are centering their attention on what the government is likely to want. One of the most prominent firms in Memphis, identified with the open competition plan, says that it has changed all of its sawing instructions and that its entire output will be available for government use if it is wanted. In other words nothing is being cut unless it measures up to the specifications the government has named. And some of the others are falling in line on the same proposition.

Because of the scarcity of stocks, the shortage of labor and the lack of log supplies, resulting from the deficiency in flat cars, and because of the excellent demand for southern hardwoods, generally, prices are showing an advancing tendency, and members of the open competition plan are inclined to believe that this process of gradually higher prices will obtain until production can be substantially increased through a larger supply of cars and the logs they will handle.

M. W. Stark, chairman of the open competition plan, was present at the meeting, as were also: Bruce Burns, president of the Hardwood Manufacturers' Association, and F. R. Gadd, assistant to the president. Among the other out of town lumbermen present were: W. B. Burke, Lamb-Fish Lumber Company, Charleston, Miss.; W. H. Dick, Tallahatchie Lumber Company, Phillip, Miss.; Fred Conn, Bayou Land & Lumber Company, Shreveport, La., and A. O. Davis, Sabine Tram Company, Beaumont, Tex. Quite a number of members of the association at Memphis also took part in the proceedings.

Memphis Lumbermen Give Liberally to Y. M. C. A. Work

In the brief space of about fifteen minutes Saturday, November 10, members of the Lumbermen's Club of Memphis, following unanimous suspension of the rules of that organization, subscribed \$5,400 to the Y. M. C. A. war work fund. The suggestion that the matter be handled in this particular way was made by S. B. Anderson, whose son, Harry, is "some-where in France," and that valiant worker was ably seconded by Earl Palmer, who has a son each in the army and navy.

The latter made a speech in which he said that the men who had volunteered their services to the government were far ahead of their daddies in their patriotism, and that there was absolutely nothing that could be supplied that should be denied them. He elaborated on the fact that the Y. M. C. A. is not a religious organization in the strictest sense of the word, and that the great work it is doing for the men in the camps and in the cantonments in this country, in the navy, in the camps overseas and among the allies is based on "service"—on the ability of the men in charge of the work to get close to the boys, give them a warm welcome and make life worth living for them. Mr. Palmer took great pleasure in declaring that the lumbermen and the men of wealth should support this fund and all other patriotic funds with a view to showing the "leather lunged asses who are fighting against the government instead of fighting for it" that capital did not have to be conscripted in order to get it to do its part in winning the war.

The response was genuinely enthusiastic. Fourteen firms gave \$250 each and a number of others contributed \$100 each, while still a few others, mostly individuals, pledged \$50 each. Since the meeting of the club Col. Anderson has successfully continued his work in behalf of the Y. M. C. A. war fund and at the final meeting of the executive committee of the Y. M. C. A. War Work Council reported a total collected from the lumbermen of Memphis of \$7,802. Practically every lumber firm in Memphis contributed something.

These subscriptions and the total secured from lumbermen of Memphis followed the recent purchase by members of the organization of \$530,000 worth of bonds of the second Liberty Loan.

It was announced, in a communication from the Chamber of Commerce, which is identified with the United States Chamber of Commerce, that steps were being taken looking to a reorganization of the advisory committees assisting the Council of National Defense, and the suggestion was made that a member of the Lumbermen's Club should be placed on the lumber committee. A motion was made that John W. McClure of the Belgrade Lumber Company be selected for this position. Mr. McClure, however, thought it only right and proper that, before any action was taken, a committee of five should be appointed to confer with the National Hardwood Lumber Association and other interested organizations. He therefore moved that such a committee be appointed and that it be authorized to confer with the bodies indicated and to act on the information resulting from such conferences. This motion prevailed and the committee will be named.

S. M. Nickey presided in the absence of President Ralph May.

The attendance at this meeting was unusually large and the meeting proved a most delightful one. The usual luncheon was served.

No action, however, was taken regarding the date of the banquet which is to be tendered jointly to visiting lumbermen during the third week in January by the Lumbermen's Club of Memphis, the Gum Lumber Manufacturers' Association, the American Oak Manufacturers' Association, the Southern Hardwood Traffic Association and the Southern Alluvial Land Association.

Modern Hardwood Operation

The Gayoso Lumber Company, Memphis, Tenn.

The Gayoso Lumber Company, Memphis, Tenn., is a modern hardwood mill, cutting mostly hardwoods, chiefly oak, gum, ash, cottonwood, and hickory, and some cypress. The mill at Memphis has an average capacity of 60,000 feet per day. When conditions permit the bringing in of an adequate log supply, this mill is operated night and day. The company has another band mill at Blaine, Miss., with an average capacity of 50,000 feet a day.

At present the main log supply for the Memphis mill is drawn from a tract of timber recently bought in the famous St. Francis basin. This

SOLID TRAINLOAD OF LOGS CUT FROM OUR OWN TIMBER FOR OPERATING MEMPHIS MILL.

DAILY CAPACITY 60,000 FEET.

DERRICK ON MEMPHIS YARD, EQUIPPED TO STORE 1,000,000 FEET.

tract contains more than 300,000,000 feet. The company operates its own logging equipment and locomotive power, and has its own trackage for both mills.

The general management of the business is under the direct supervision of W. A. Ransom who is president of the concern. C. R. Ransom is secretary and treasurer.

The Gayoso Lumber Company has in its various departments in the neighborhood of 400 employees. At the present time it has on sticks more than 10,000,000 feet of lumber.

With the Trade

"He's Who," in Louisville

Among the "Who's Who," in Louisville lumber circles is young A. E. Norman, Jr., vice-president of the Norman Lumber Company, director of the Louisville branch of the Southern Hardwood Traffic Association, and recently elected president of the Louisville Hardwood Club, who last year served as vice-president of the organization, and filled out the unexpired term of the club's late president, Smith Milton.

Mr. Norman is one of the youngest big men in the local trade and at the age of twenty-seven years is president of the club, being the youngest president the club has had during its ten years of service. His connection with the lumber business dates back five years, or back to the time when he entered the business with his father, A. E. Norman, Sr., one of the pioneer Louisville lumbermen.

Graduating from the Louisville Male High School, where incidentally he captained the football team, he went to Princeton University, where he put in a full four year term before returning to Louisville to take up the lumber business. This fall he married Miss Nell Crutcher Fulton, daughter of Dr. Gavin Fulton, a prominent local physician.

An interesting angle in his presidency of the local hardwood club is in the fact that his father, A. E. Norman, Sr., was a charter member and first president of the organization. He later served several terms as president, and even during the past year acted as chairman on several occasions when the regular officers were absent.

Young Norman is truly a chip from the old block, and is taking to the lumber industry as a duck takes to water. Of course he comes from a family that has been well entrenched in the southern lumber trade for many years, and probably knows more about sawmills and lumber at the outset than the average man entering into business upon leaving college. However, the five years that he has been actually connected with the trade have given him an insight into conditions which many men have spent a lifetime in acquiring, and this fact is shown conclusively by the action of the club members in electing him to the presidency of the organization, from a membership which includes many men who are well up in every angle of the hardwood lumber industry.

Yeager-Stabell

Arthur J. Yeager, city salesman of the Yeager Lumber Company, Buffalo, N. Y., and son of Orson E. Yeager, was married at the Church of the Holy Angels November 15 to Miss Martha K. Stabell, daughter of a leading Buffalo contractor. The groom's two cousins, John H. and Maurice Wall, sons of James B. Wall, were among the ushers. After December 15 Mr. and Mrs. Yeager will be at home at 89 Minnesota avenue.

To Appraise the Crane Lands

Commissioners have been appointed in West Virginia to appraise the lands of Cole & Crane in that state for the purpose of levying the inheritance tax against the holdings of the late Clinton Crane of Cincinnati. The appraisers are Wells Goodykoontz, F. C. Leftwich, and Naaman Jackson. Cole & Crane of Cincinnati have been said to be the largest individual holders of land in West Virginia. Their holdings are enormous. Some

time before the death of the junior partner Cole & Crane created a trust, of which Judge C. W. Campbell of Huntington, W. Va., is a member, to take over these lands. The trust became operative at the death of Capt. Crane.

H. Bauman Sales Manager for American Column & Lumber Co.

As announced in a recent issue of *HARDWOOD RECORD*, W. C. Barlett, formerly sales manager for the American Column & Lumber Company at St. Albans, W. Va., is now with the Thomas Hall Lumber Company at Charleston, W. Va. H. Bauman, who has been well known in hardwood circles for a good many years, recently took the position of sales manager for the St. Albans firm.

Mr. Bauman has had general practical experience in manufacture, inspection and selling of southern hardwoods, and immediately prior to going to St. Albans was sales manager for the C. & W. Kramer Company, Richmond, Ind.

J. R. Dean Now an Aviator

J. Richmond Dean, formerly vice-president and treasurer of The Dean-Spicer Company, manufacturer of fancy wood veneers at Chicago, recently took the examinations for the aviation service and passed with flying colors. He has been at Camp Kelly, San Antonio, Tex., for four or five weeks, and it is expected that with the excellent record he has made he will have attained a captain's commission within three or four months.

As an example of the rigid character of the examinations it is said that only about five per cent of the participants get through. The fact of a man's having passed is a pretty good demonstration of his mentality.

Mr. Dean has been in the lumber business for quite a number of years in Chicago and has been connected with the operation now controlled by The Dean-Spicer Company for several years, it having prior to its acquisition by this company been operated as The Black Lumber & Veneer Company, of which Mr. Dean was vice-president.

It is announced at The Dean-Spicer office that Maxwell P. Spicker, son of J. T. Spicker, has been elected treasurer to succeed Mr. Dean.

Tribute Paid to Horace C. Mills

A committee was appointed at the last meeting of the Buffalo Lumber Exchange to draw up memorial resolutions on the death of Horace C. Mills, who for nearly half a century was connected with Taylor & Crate, and treasurer of that corporation since the business took that form in 1900. The evidence of high esteem in which Mr. Mills was held was evidenced by the large number of lumbermen in attendance at his funeral. As one of his associates said: "We remember him as the true type of the Christian business man."

Five Million Dollar Airplane Plant

The Standard Aircraft Corporation, with factories in Plainfield and Elizabeth, N. J., has been incorporated in Albany for \$5,000,000, divided into \$2,000,000 preferred and \$3,000,000 common stock. Harry Bowers Mingle is president of the new corporation and the board of directors is composed of Charles H. Day, C. Vernon Bradford, Daniel L. Meenan, Jr., C. G. Stratt and Mr. Mingle.

It was announced that the new concern now has millions of dollars worth of government orders and expects to employ more than 8,000 men and women in the main plants. The new plant at Elizabeth, N. J., covers eighty-seven acres and the main buildings have more than 300,000 square feet floor space. There is also a sixty-acre flying field and five acres of waterfront on which will be established the hydro-airplane hangars and test sheds. This plant represents an investment of more than \$1,000,000. In addition to the two main plants, the Standard Aircraft Corporation has seven smaller factories in which parts of airplanes are made. It is expected that sixty airplanes a week will be the normal output of the new corporation.

The description of this organization indicates that it should be a large buyer of hardwood lumber, veneers and other woods products which play so important a part in airplane construction.

Wertz Buys Maley Interests

Daniel A. Wertz has purchased the interest of the late Claude E. Maley in the firm of Maley & Wertz, hardwood lumber manufacturers of Evansville, and will take over all the business and operate it under the same name. There will be no change in the official staff here. The deal includes two sawmills and large lumber yards in Evansville, one mill and yards at Vincennes, Ind., and a sawmill at Grammer, Ind. The business at Vincennes is gradually being closed out, and the mill at that place has not been running for some time. The firm was started in Evansville about fifteen years ago and is one of the best known in the West. The business extends into many states. Mr. Wertz, who is now at the head of this vast business, is the president of the Indiana Hardwood Lumber Association.

Maley & Wertz recently bought a big supply of logs from John A. Reitz & Sons of Evansville. The Reitz mill is now closed down.

A. Harvey McCay

A. Harvey McCay, for a number of years Baltimore representative of Wm. Whitmer & Sons, Philadelphia, with offices in the Equitable building, died November 11, the direct cause being pneumonia. Mr. McCay had not been in good health for some years and had taken extensive vacations during the summer. Last summer he spent some months on Long Island, returning considerably improved, but a nervous disorder reasserted itself, and for some months he had been under the doctor's care. Mr. McCay was born in Augusta, Ga., about fifty years ago and came to Baltimore with his father, the late Prof. Charles F. McCay, when quite young. He was educated in the Monumental City and became prominent socially as well as in a business way. His brother, Lieut. H. Kent McCay, who is now in the United States Navy, was formerly harbor engineer of Baltimore. Two sisters also survive him. When increasing infirmities compelled Mr. McCay to curtail his activities, his nephew, Charles M. Buchanan, took up largely the work of looking after the interests of the Whitmers. Mr. Buchanan is now in the service as a member of Battery A, Light Artillery, which was formed in Baltimore more than a year ago.

Traffic Affairs

The Beeson Stave Company of Horatio, Ark., has filed complaint with the Interstate Commerce Commission against the Kansas City Southern Railway. The complaint states that the complainant shipped a lot of oak staves from Wickes, Ark., to New York, but billed to complete loading in transit at Coke, Ark. The railroads charged the full 7-cent local rate from Wickes to Cove. Complainant claims that the through rate of 28 cents, Wickes to New York, should have applied, plus a charge of \$5 per car for the privilege of loading in transit. The establishment of such rate and charge is asked of the commission, also reparation of the difference between \$5 per car plus the through rate, and the local rate combination paid, the said difference being \$30.

E. G. Boyd, agent, has applied to the commission for approval of a tariff he wants to file cancelling routing in connection with lumber and related articles from Wisconsin and Northern Railway stations via the Soo Line, Pembine, Wis., and the St. Paul Railway.

Application was also filed under the amended fifteenth section of the interstate commerce law for increased rates on crossties from Hobbs Island, Ala., to Calro (proper and for beyond), Ill., and Brookport (for beyond), Ill., provided in tariff I. C. C. No. 2228-A (Western Lumber Tariff No. 7).

F. Anderson, agent, has filed application for approval of rates on box material, staves and heading manufactured of cottonwood or gum lumber, from Helena and West Helena, Ark., to Council Bluffs, Ia.; Lincoln, Neb., and Wichita, Kan., and other points.

J. V. Norman, counsel of the Southern Hardwood Traffic Association, says that the railroads made out a poor claim for higher rates in the 15 per cent advance rate case. Their own exhibits, he said, show that their income this year is 30 per cent higher than last year. Mr. Norman declares that the railroads should not be permitted to interfere with government operations for financing the war by competing with the government

for investment funds. He did not believe that the carriers need increased revenues, but if they do the government might loan them funds.

Pertinent Information

A Record in Lumber Shipments

Secretary O. T. Swan of the Northern Hemlock & Hardwood Manufacturers' Association, and also secretary of the temporary Northern Hemlock & Hardwood Emergency Bureau, told the other day of a new record in shipments to meet the government needs for lumber. It seems that the government contractor was shy about thirteen cars of mixed lumber to finish up the cantonment at Rockford, Ill. It was not possible for him to get the material from local yards so on a Saturday morning he called up Secretary Swan on the long distance 'phone, reaching him at about eleven o'clock and explaining to him the circumstances, emphasizing the fact that the lumber must reach Rockford by Wednesday night of the following week. Mr. Swan, of course, was dubious over the possibility at first, but promised he would get in action immediately and if it could be done it would.

He in turn communicated with the members of his association over the long distance wires with the result that thirteen cars of mixed lumber and flooring, the lumber dressed and matched and surfaced two sides, and including two cars of dimension lumber, the entire lot having been worked in the planing mills prior to being loaded, was on the way by Sunday night.

The lumber was furnished by the John S. Owen Lumber Company, Owen, Wis.; the Medford Lumber Company, Medford, Wis.; the Westboro Lumber Company, Westboro, Wis.; Park Falls Lumber Company, Park Falls, and the Kneeland-McClurg Lumber Company, Philipps. The material was shipped out over the Soo line and this road collaborated so well with the secretary's office that he was able at any time to put his pencil on the point of the map where each car was at that particular time. The lumber began rolling into Rockford on Tuesday night and the entire shipment was completed by Wednesday morning, thus illustrating what can be done through proper co-operation.

The Kiln Drying of Lumber

H. D. Tiemann's book on kiln drying lumber has come from the press of the J. B. Lippincott Company, Philadelphia. HARDWOOD RECORD has had occasion to speak in advance of this book. Mr. Tiemann is well known to the readers of this paper. He has contributed many articles to its pages, relating to his specialty, the scientific seasoning of lumber. He has worked along that line for several years, principally at the government laboratory, Madison, Wis., where he built a kiln after his own ideas and where he carried out hundreds of experiments in all kinds of wood drying.

Every page of the book contains conclusions reached by his own experiments and tests. Though the book is published as his individual work, yet investigations carried on for and by the government are described or referred to on every page. The book is for the general lumberman and it is also for the scientist. The dry kiln operator will find in it a manual for his guidance; and if the student of wood physics wishes to delve into the technical side of lumber drying, the mathematics, mechanics and formulas are there.

A table showing the dry weight per 1,000 feet of seventy-four American woods will be appreciated by many a lumber shipper who has often wanted that information without being able to lay his hand on it at the time wanted. Mr. Tiemann lists arbor vitae as our lightest commercial wood and osage orange as the heaviest, though there are heavier and lighter woods among the minor species.

It may be confidently predicted that Mr. Tiemann's book will take its place among standard works on the kiln drying of lumber.

BRIDGEPORT STANDARD

SERVICE DEPARTMENTS

enable lumber dealers to give SERVICE that will ensure satisfaction to everybody concerned—to the home owner, the architect, the contractor and builder, the painter and decorator.

These service departments are helping the United States, which largely owe to put the retail lumber business on the same successful basis as that of the successful application of the Service Idea.

Let us tell you about the Bridgeport Standard Service Idea

War Hurts Minor Wood Industries

The wood carving industry in Switzerland has been all but killed by the war, according to a report by Consul Philip Holland, published in a recent commerce report. This holds true more particularly of wood carving, but applies to other industries which use wood as raw material. The factories have attempted to find other business—some have taken up the manufacture of artificial limbs, while others make toys.

Hardwood News Notes

< MISCELLANEOUS >

The Milton Box Company has been incorporated at Milton, Ore.

The Johnson Tank Company of Augusta and Eldorado, Kansas, has sold out to the American Tank Company of Cushing, Okla.

At Fort Worth, Tex., the Texas Hardwood Company has been incorporated.

Hastings Brothers, Bethel, Me., have filed a voluntary petition in bankruptcy.

At Wellsville, N. Y., the Coats Manufacturing Company is a voluntary bankrupt.

At Manistee, Mich., the Michigan Lumber Company has been incorporated at \$25,000.

The E. Z. Comfort Chair Company is a recently incorporated concern at Louisville, Ky.

The Tyrrell Manufacturing Company, Columbia, N. C., has been incorporated at \$25,000.

A new organization at Dothan, Ala., is the Dothan Coffin & Casket Manufacturing Company.

Alexander Brothers, Belzoni, Miss., are reported to have sustained a loss by fire recently.

The Michigan Trust Company has been appointed receiver for the C. S. Paine Company.

The capital stock of the Shawano Lumber Company, Shawano, Wis., has been increased to \$150,000.

The Texas Wheel & Body Company is a new incorporation at Dallas, Tex., capitalized at \$25,000.

The Empire Chair Company, Johnson City, Tenn., has increased its capital from \$150,000 to \$200,000.

The Doyle, Kelly, Bannister Coffin Company has been incorporated at Emporia, Va., with \$5,000 capital.

The Delta Hardwood Lumber Company has been incorporated at Belzoni, Miss., with a capital of \$6,000.

The Tower & Kelly Lumber Company, Detroit, Mich., has made a settlement with the creditors and is liquidating.

With a capital stock of \$10,000, the Marshville Planing Mill & Lumber Company has been incorporated at Wadesboro, N. C.

An increase in capital stock has been made by the Chattanooga Manufacturing Company, Chattanooga, Tenn., from \$50,000 to \$100,000.

R. G. Richardson, Mary A. Richardson, T. D. Lepps and W. G. Frick are the incorporators of the Keyser Wood Working Company at Keyser, W. Va. The capital is \$10,000.

< CHICAGO >

The Hendrix Mill & Lumber Company has been incorporated at Mound City, Ill., its capital being \$20,000.

At Chicago the National Toy Crafters (Inc.) has engaged in business with a capital of \$10,000.

A. R. L. Mueseler & Sons Company, city, has filed an involuntary petition in bankruptcy.

The Piano Back & Case Manufacturing Company has been incorporated locally with a capital of \$100,000.

The capital of the Flottorp Manufacturing Company, Chicago, has been increased from \$25,000 to \$50,000.

T. J. McDonald, well-known in southern timber circles, with headquarters at Knoxville, Tenn., is in Chicago for a substantial stay. Mr. McDonald states that there has been a noticeable increase in timber activity of late, and he seems quite encouraged over the prospects.

R. L. Jurden and J. N. Penrod, respectively of Memphis, Tenn., and Kansas City, Mo., spent Sunday and Monday in the city. Mr. Penrod was unfortunate in being taken sick the day he arrived, but seemed to have recovered from his indisposition before he left.

Sam A. Thompson of the Anderson-Tully Company, Memphis, Tenn., passed through Chicago the beginning of the week on his way back to Memphis from a protracted eastern trip.

< BUFFALO >

Some of the local lumbermen are taking alarm on account of certain published views on the trade, which would give one an idea that the government was trying to suppress the movement of lumber entirely, on the ground that Europe has stopped building and that this country

might as well do so. The railroads will not carry sand or gravel and it is feared that other building material may follow in the same way. Hardwood dealers are picking up all the birch and maple they can find.

The increased scarcity of cars naturally attracts much attention to the enlarged Erie canal, which is to be completed before navigation opens next spring. When it was at first projected, capital seemed rather eager to take it up and there was fear that the railroad truck lines, through their lake lines, would try to monopolize it with fleets of their own, and there were propositions to forbid it by law. Nothing was done, however, and now no organized effort is being made to place fleets on the enlarged waterway, much as shippers are likely to need it next season. The present canal and its predecessor have been famous for the amount of lumber they floated. For a long time the Erie canal made the rates for grain and lumber across New York state to tidewater, and it is hoped now that someone will provide the enlarged tonnage needed.

◀ PITTSBURGH ▶

The Miller-Owen Electric Company, Inc., has bought 18,000 square feet on Lexington avenue and is having plans prepared by the C. D. Cooley company of this city for a plant to cost \$40,000.

The L. C. Graves Company of Springboro, Pa., manufacturer of commercial bodies for Ford cars, has been reorganized and the new owners are E. C. Sweeney and F. C. Eckels of Conneautville, Pa. They have secured the old chair company plant for their new industry there.

The city of Erie, Pa., has landed the first government owned and operated steel plant. A site of 250 acres has been purchased by Robert F. Devine of the Erie Forge Company and the \$5,000,000 plant will be built there soon.

Wholesalers all over Pennsylvania are elated at the recent election of E. V. Babcock, president of the Babcock Lumber Company as mayor of Pittsburgh. Mr. Babcock has promised a thoroughly-clean business-like administration and what E. V. says always "goes" with the "boys."

The Erie Railroad Company is arranging to spend about \$200,000 for a new roundhouse and additions to its other buildings at its Ferrona yards near Farrell, Pa.

The Engle Aircraft Company, which lately took over the plant of the Niles Car Company at Niles, O., and which has a capital of \$1,000,000, has started work on a second big addition to its plant there.

Two large factories are promised for the Point Breeze Section in Pittsburgh. The Ward & Mackey Biscuit Company has bought 46,000 square feet of space on Lexington avenue and will build a plant at once to cost \$350,000.

◀ BALTIMORE ▶

The annual meeting of the Baltimore Lumber Exchange will be held on December 2. Arrangements are now being made by the house committee and in all probability the affair will be held in the Merchants' Club. On account of the war the social features are likely to be less elaborate than usual. Officers will be elected and other business transacted.

M. M. Davis & Son, shipbuilders at Solomons, Md., have joined forces with Moses, Pope & Trainer, marine engineers of New York, and have been incorporated under the name of M. M. Davis & Son, Inc. One result of this action will be an extension of the yards at Solomons and a corresponding increase in the activities of the concern. The officers of the new company are: M. M. Davis, president; Clarence E. Davis, vice-president; J. N. Trainer, Jr., secretary and treasurer. New York offices have been opened at 366 Fifth avenue.

Fire on November 19 destroyed the plant of the F. X. Hooper Manufacturing Company, maker of the rotary press used to print on wooden packing boxes at Glenarm, Baltimore county. The damage is estimated at \$100,000.

Forest fires have been raging for three days in the mountains west of Thurmont, Frederick county, Md., and much damage to standing timber has been caused.

The statement of exports of lumber and logs from Baltimore for October shows a marked improvement over all of the other months of the current year. Spruce continues to be the main item on the list, but there are others that add materially to the total, among them oak and poplar boards, which have not figured to any extent for a long time. The shipments of implement and too handles are apparently on the increase. The statement for last month shows a total value of \$125,301 as compared with \$87,760 for October, 1916.

◀ COLUMBUS ▶

Columbus building activities showed a slump of about 50 per cent in October, compared to October, 1916. This decrease, based on building costs, is slightly in advance of the average decrease throughout the country, but is smaller than shown in many large cities. Building permits issued in Columbus during the last week, however, showed a return to something near the former weekly mark here, and many building activities involving considerable sums are now planned locally.

The Acorn Lumber Company will go out of business on December 1. The city will require its present site for use in widening the channel of the Scioto river.

Columbus lumber jobbers, while seeking to get shipments hurried from mills in the South, have been advised that, aroused to the necessity of greater efforts if the nation's wooden fleet plans are not allowed to drag

dangerously, southern lumber manufacturers have inaugurated a speeding up program by which it is hoped to increase the output of ship timbers from 850,000 feet to 2,000,000 feet a day.

Following the incorporation for \$150,000 of the Brasher Lumber Company, with offices in the Columbus Saving and Trust building, the company proposes to take over an Alabama sawmill and manufacture lumber for its own account. The incorporators are H. D. Brasher, president; Geo. R. Hedges, H. R. Walker, Dana F. Reynolds and E. D. Howard.

M. C. Brandenburg, who has for the past fifteen years been connected with various lumber companies in Cincinnati, has branched out in business for himself. Mr. Brandenburg will do a wholesale and commission business in cypress, yellow pine and hardwoods, and expects to make a specialty of handling consignments for the mills. His present address is 2244 Glenway avenue, South Norwood, Cincinnati, Ohio.

The Trotter Lumber Company, Toledo, has increased its capital from \$10,000 to \$50,000.

The Bennett Road Lumber Company, Toledo, has been incorporated with a capital of \$10,000 to deal in lumber. The incorporators are Rupert Holland, Thomas H. Thompson, James C. Martz, Emlitt C. Sayles and Benjamin Seipel.

The Capitol Hardwood Lumber Company, Columbus, has been incorporated with a capital of \$10,000 to deal in lumber. The incorporators are M. L. Knotts, B. P. Boardman, Samuel Weil, J. L. Murray and Fred M. McSweeney.

The Mid West Box Company, Cleveland, has been incorporated with a capital of \$250,000 to make boxes. The incorporators are L. C. Shields, Joseph E. Kowley, W. F. Minor, John E. Ryan and Paul F. Bauder.

R. W. Horton of the W. M. Ritter Lumber Company reports a good demand for hardwoods, principally from manufacturing concerns. Factories making boxes and furniture are buying rather liberally, and the same is true of implements concerns. Retail trade is also sprucing up to a certain extent. Retail stocks are not large. Embargoes and car shortage make shipping a slow process at this time.

J. A. Ford of the Imperial Lumber Company reports a good demand for West Virginia hardwoods with prices continuing rather firm.

◀ CLEVELAND ▶

An association, in which hardwood and other lumber interests, as well as all building trades interests in this district will be identified, is being organized here, and probably will be completed within a month. With a competent secretary appointed, the organization will be ready to consider the labor situation, for which it is primarily forming. It is the belief of those interested in the project that the position of labor as a whole is becoming more aggressive and that protective measures must be taken by the lumber and allied industries against any possible unwarranted activities by labor.

Plans for a trip to Chillicothe are being made by the hardwood interests of the city. This trip will be made in a body, with the idea of cheering up members of the trade and boys who formerly worked with the hardwood interests here, and who now are at Camp Sherman.

The big firms of Cleveland have been unusually fortunate this year, now that Great Lakes traffic is nearing the end of the season, in that not a single boat or cargo was lost in 1917. The Cleveland fleet is now up the lakes taking on final cargoes.

◀ INDIANAPOLIS ▶

Indiana lumbermen, who had been opposing a petition filed with the Indiana Public Service Commission by railroads asking for an increase of 15 per cent in intrastate rates, won a partial victory last week when the commission refused to grant the permission, but granted the railroads an increase of 5 per cent in intrastate rates. Lumbermen had joined hands with shippers of other industries in opposing the increase on the grounds that the proposed rate increase would prove almost prohibitive in many cases.

A sawmill owned by M. Moore & Co., Cromwell, Ind., was destroyed by fire last week, causing a loss estimated at \$7,000, covered by insurance.

The Wright-Bachman Lumber Company, Indianapolis, has increased its capitalization from \$30,000 to \$150,000.

The plant of the Pierce Furniture Company, Anderson, Ind., was damaged by fire to the extent of \$7,000. The loss was covered by insurance. The plant will be rebuilt immediately.

Samuel Adams, sawmill operator near Connersville, Ind., has announced plans for erecting a new plant, which will be larger than the old.

Isaac Brewer and William Roach, owners of the Roach & Brewer Lumber Company, Indianapolis, who recently were arrested and held under \$2,000 bonds on the charge of receiving stolen goods, have been released,

their cases having been thrown out of court. The two lumbermen were arrested on warrants sworn out by the city, which alleged that the two men had purchased timber which had been cut and stolen from property owned by the city. An investigation by the prosecutor revealed that there was no basis for the charges.

◀ MEMPHIS ▶

The Madison Lumber Company has been formed at Talulah, La., by stockholders in the E. Sondheimer Company, Memphis, and the principals in the firm of Sneed & Jamison. It is capitalized at \$50,000 and has begun the erection of a mill of 35,000 feet capacity, single band, at Quinby, La. These gentlemen recently acquired the Wolf tract of timber near the latter point and are preparing to develop it as rapidly as possible. Rudolph Sondheimer is president, Mr. Sneed, of Sneed & Jamison, is vice-president, and Charles Dickinson, of the E. Sondheimer Company, is secretary-treasurer.

F. B. Larson, assistant secretary of the Southern Hardwood Traffic Association, has returned from Alexandria, La., where he attended the organization meeting of the Southwestern Manufacturers' Club. He says twenty-three charter members were enrolled and that A. Deutsch of the Sabine Lumber & Logging Company, Beaumont, Tex., was elected president, and A. O. Davis of the Sabine Tram Company, acting secretary. The next meeting of this organization will be held at Beaumont, Tex., February 23, unless the president deems it necessary to call one for an earlier date. Mr. Larson attended the meeting with a view to securing the affiliation of this new body with the Southern Hardwood Traffic Association, and said on his return that he had received considerable encouragement from the members. He will pursue the subject further between now and the time of the next meeting.

H. B. Weiss, secretary of George C. Brown & Co., president of the Gum Lumber Manufacturers' Association, and a member of the Southern Hardwood Emergency Bureau, is leaving for Washington tonight. He will remain there two weeks, acting in an advisory capacity to the bureau. He will be followed in due course by W. A. Ransom of the Gayoso Lumber Company, and Ralph May of May Brothers, each of whom have agreed to give two out of every six weeks of their time to the affairs of the bureau. R. L. Jurden of Memphis is at present serving the bureau in Washington.

Mr. Weiss, before leaving for Washington, said, that he had about come to the conclusion that "patriotism and profits" would not mix any more than oil and water and that it was up to the lumbermen to place themselves, their plants, their entire capital and their whole resources squarely back of the government, to the end that the latter might secure all the

MILLER LUMBER COMPANY

MARIANNA, ARKANSAS

lumber and timbers necessary to its war program. He expressed pleasure over the enlargement of the bureau and over the new policy it has outlined and believes that the new plan will make for effective co-operation between the hardwood lumbermen and the government. He believes that much of the uncertainty heretofore hanging over the lumbermen has been removed and that in a little while it will be possible for them to handle government orders in a manner that will be wholly satisfactory to the government and distinctly to their own advantage, especially in view of the fact that the government will see to it that cars are forthcoming for the handling of all orders placed for government use.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, returned Sunday from Washington, where he spent all of the past week in connection with the 15 per cent rate advance case before the Interstate Commerce Commission. He is much encouraged over the outlook for the lumbermen.

Ralph May of May Brothers is back from a trip to Washington and from a business visit to a number of the larger centres in the North and East. He says that the outlook for business is very good, but that it is becoming increasingly clear that certain items are going to move slowly and that the car situation is going to be so bad that those catering to any other than government requirements are likely to find much difficulty in effecting deliveries of lumber even after the stock has been sold.

◀ LOUISVILLE ▶

At the last weekly meeting of the Louisville Hardwood Club the new president, A. E. Norman, Jr., announced his committees for the year, as follows:

ENTERTAINMENT—H. E. Kline, E. B. Norman and Edward Duval.
FINANCE—P. P. Joyes, H. J. Gates and Edward L. Davis.
TRANSPORTATION—D. E. Kline, T. M. Brown and H. E. Snyder.
LOGS—E. S. Shippen, Will Day and H. E. Kline.
LUMBER—E. L. Davis, E. B. Norman and T. J. Christian.

As president of the club Mr. Norman is ex-officio member of all of the committees named.

Members of the association in discussing general conditions brought out the fact that business has picked up well during the past two or three weeks, and is much better than it has been, orders coming freely and prices being right. Government orders continue steady and good, but general consumers are afraid of shipping restrictions on non-essentials and are placing heavy orders for requirements.

The plant of the Lack Singletree Company, Paducah, Ky., was recently damaged to the extent of \$3,000 by fire, which started from a generator, shortly after the plant had started up in the morning. The blaze started

in the woodworking department. The loss was fully insured.

A contract for approximately 2,000,000 feet of yellow pine was recently placed with the W. R. Willett Lumber Company, this lumber to be used in building annexes at the Quartermaster's Depot, Jeffersonville, Ind., the building contract being held by the Alfred Struck Company of Louisville, planing mill operators and general contractors. The Willett company handles both hard and soft woods, but this is one of the largest pine contracts placed in Louisville in years, other than those on the cantonment, which were placed mainly with the Southern Pine Emergency Bureau. C. H. Willett and Harry Roy of the Willett company are back from the southern pine districts, where they made arrangements to get the shipments started to Jeffersonville, it being planned to have all the material on the ground within three weeks.

The Louisville Point Lumber Company was successful on two small bids for maple and poplar to be used by the Navy Department, the bids having been opened in Washington a few days ago. The Mengel Box Company recently received additional munitions box contracts. Only a comparatively few number of direct government orders have been taken recently, but a number of indirect orders are keeping things active.

The United States Supreme Court has held in favor of the Interstate Commerce Commission and the lumber interests in connection with the Paducah rate case, relative to tariffs on coopeage stock, and articles taking the lumber rate, from southwestern territory to Paducah. This case has been before the Interstate Commerce Commission a goodly part of the past two years, and in every hearing the Paducah Coopeage Company and Paducah Board of Trade won. The last hearing resulted in the commission ordering new rates applied, but injunction proceedings in the Federal courts held up execution of the order for some months. The ruling of the supreme court dissolves the injunction, and the new rates will be applied about the first of the year.

Manufacturers of specialties are advertising extensively in the country newspapers for requirements, and at that are not getting anything like as much material as they need, although labor conditions are showing some improvement since the crops were harvested, and more material is being cut. The Wood-Mosaic Company of New Albany, Ind., is scouring the country for walnut logs, and government employes have recently been in New Albany aiding in a movement to hurry up the logs for gunstock manufacturing. The company is still advertising for 2,500 cars, offering spot cash at loading points for all the walnut timber that can be procured. The Turner, Day & Woolworth Handle Company is having trouble getting short dimension timber for handle manufacturing, shuttle blocks, golf stock, etc. The Columbus Handle & Tool Company of Columbus, Ind.; the Standard Wheel Company of Berea, R. Burleigh & Sons of Dawson

American Lumber & Mfg. Co.
PITTSBURGH, PA.

Springs, Ky., and various other concerns are advertising for hickory, oak, chestnut, locust or other materials.

A new tugboat, christened the "R. M. White," has left Louisville for Cape Girardeau, Nicaragua, where she will be placed in operation by the C. C. Mengel & Bro. Company, which had the vessel built at the Howard Shipyard, J. J. Personville, Ind. This boat will make the trip of 4,500 miles under her own power, and will batter her way through the Gulf and Caribbean sea, one of the longest trips ever attempted by an inland river boat.

At Paducah, Ky., the Ferguson Hardwood Lumber Company is again operating after a layoff of several days while attempting to accumulate a supply of logs, during low stages in the river. The company has lighted its entire mill with electricity and its derrick operations, so that it can work night shifts from the river to the yards.

William Webb of Mudlick, Ky., has taken over the P. C. Haynie lumber mill at Tompkinsville, Ky., and he started sawing gunstock flitches of walnut for the government. J. R. Dickerson and Andrew Gerald are associated in the movement with Mr. Webb. A fair supply of logs have been received and others are coming fast.

ARKANSAS

The Gates Lumber Company, Wilmar, Ark., is planning to install a band sawmill for the manufacture of hardwood lumber in connection with its large pine mill. This company has long been one of the leading manufacturers of yellow pine of this state, and its entering the hardwood field will be viewed with interest. The company now owns large areas of hardwood stumpage, believed to be sufficient to prolong the operations of the company indefinitely.

F. B. Leonard, operator of a vehicle stock plant at Metropolis, Ill., has commenced the erection of a sawmill at Marianna, Ark., to manufacture hickory, pecan and other hardwoods into lumber. The new mill will have a daily capacity of 30,000 feet. Mr. Leonard has been buying hardwood timber in that section of Arkansas for the past several years, and at last has been induced to erect the sawmill. This will save him considerable money in the way of freight on the timber from Arkansas to his plant in Illinois. His plan now is to manufacture the timber into rough lumber and ship in that state to his Illinois plant to be finished.

J. M. Wells of St. Louis has secured an interest in the Marianna Spoke Company, which owns and operates a spoke factory at Marianna, Ark. The company's name will be changed to the Marianna Spoke & Lumber Company. The operations of the concern are to be largely extended.

The Southern Coopersage Company is preparing to erect and operate a coopersage plant at Swifton, Ark.

WISCONSIN

The M. H. Sprague Lumber Company, Washburn, Wis., has completed its season's run and closed its sawmill for the winter. The planing mill will be kept in operation.

August Knoller, DePere, Wis., has traded 480 acres of hardwood timber at Pelican Lake, Wis., for the gasoline engine factory and machine shop of the Klemish Manufacturing Company, Kewaunee, Wis. The properties each are valued at \$12,000.

C. D. Clarke, formerly of the C. D. Clarke Lumber Company, Merrill, Wis., has become associated with the Brown Brothers Lumber Company, Rhinelander, Wis., in an executive position.

The New Dells Lumber Company, Eau Claire, Wis., has resumed operations in its sawmill after being closed three weeks for repairs and overhauling. Logs have started to move from the camps, which employ 300 men. The New Dells company shipped 2,500,000 feet of lumber to the National Army cantonments at Battle Creek, Mich., and Rockford, Ill., in record time during the past season.

The Rib Lake Lumber Company, Rib Lake, Wis., has placed its new planing mill at that point into full operation. It is one of the most modern in the country and is electrically operated throughout.

The Kleckhefer Box Company, Milwaukee, has announced to its employees that it will again pay a 5 per cent bonus on wages of all men in continuous employment during the year. The bonus is payable in cash. Last year a similar bonus was paid, but the checks were deposited in banks to the credit of the men.

The Simmons Boat Company, Chicago, has purchased the controlling interest in the Racine Boat Company, Racine, Wis., the merger being effected to facilitate the execution of government contracts. The Chicago yard will continue to build boats over 50 feet long and the Racine company under 50 feet. O. M. Godske is superseded as vice-president of the Racine company by Ned Simmons, who assumes charge of design and construction in both yards.

The Willow River Lumber Company, Grand View and Hayward, Wis., expects to cut 20,000,000 feet of logs during the coming winter. It has been able to obtain a fair supply of good woodsmen and anticipates no difficulty in meeting the estimate of its cut.

The McDonough Manufacturing Company, Eau Claire, Wis., recently made delivery in record-breaking time of ten complete sawmill units for shipment to France for the United States forestry engineers. The contract was executed in fifty-five days. Ordinarily such work would keep the plant fairly well occupied for eight or ten months. It required 30,000 feet of lumber to box and crate the shipment for ocean transit.

The Oshkosh (Wis.) Excelsior Manufacturing Company has decreased its capital stock from \$100,000 to \$50,000.

The Stowell Lumber Company, Milwaukee, has been organized with an authorized capital stock of \$5,000 by Werner J. Trimborn, Raymond J. Grode and E. L. Nohl.

The Standard Realty Company, Manitowish, Wis., has been organized by a number of large employers of labor in that city for the purpose of building 100 homes for workmen in Manitowish during 1918. Twenty-one duplex houses will be erected. The total investment will exceed \$120,000. Julius Lindstedt is president of the company.

The Oconto Company, Chicago and Oconto, Wis., won its case against the Wisconsin & Northern Railway Company in the Dane county circuit court, and under the decision the Chicago & Northwestern is granted the right to build a connecting line through the timber holdings of the Oconto Company to Kingston, Wis. The Wisconsin & Northern sought to prevent the construction of the line on the ground that it would violate the competitive clause of the Wisconsin Railway Commission act. The Oconto Company would practically have been obliged to suspend operations of its big mills at Oconto unless it was enabled to get logs from its timberlands to the mills by means of an extension of the Northwestern road in Langlade county. It owns about 6,000 acres of timber, upon which 6,000,000 feet already have been cut but have not yet had an outlet. Ten miles of the new Northwestern extension are ready for rails.

The Rice Lake (Wis.) Lumber Company may be forced to suspend winter operations in its big sawmill so far as hardwoods are concerned because of the various unfavorable conditions with which it is confronted at this time. The hardwood log supply must be brought to Rice Lake entirely by rail. The car shortage and lack of labor for its camps are responsible for the uncertainty.

The J. W. Wells Lumber Company, Marinette, Wis., is reported to have purchased 8,000 acres of choice hardwood timber near Sagola, Mich., on the Chicago, Milwaukee & St. Paul line, thus providing millions of feet of timber for its mills when the present supplies in Marinette and Forest counties and Iron county, Mich., are exhausted. The tract just acquired probably will not be logged for three or four years more. It lies within Dickinson county, Mich., and is considered one of the finest hardwood tracts in the upper peninsula. The Wells company has a two years' cut of hardwood on eleven forties east of Iron river, along the Crystal Falls branch of the Milwaukee road, and will log part of the tract during the coming winter. The timber will be shipped to Menominee, Mich. The tract is estimated to contain 20,000,000 feet.

The big sawmill established at Glidden, Wis., twenty years ago by the Rogers & Emmons Lumber Company, is being dismantled by the Paine Lumber Company, Oshkosh, Wis., and the equipment still remaining is now being transferred to the Oshkosh mills. The Rogers & Emmons company sold the mill to the Glidden Veneer Company, which six years ago disposed of the plant and a large acreage of timber to the Paine company. Operations gradually were suspended, as the equipment was withdrawn and devoted to the purposes of the Paine plant in Oshkosh.

Work has been started by the Kiel Woodenware Company, Kiel, Wis., on a new one-story factory addition, 80x320 feet in size, and enlargement of its steam power plant, the whole to cost about \$75,000.

Antone Dodero, Florence, Wis., a well known logging jobber, has started extensive logging operations about nine miles south of Saunders, Wis., on Siding S3 of the Long Lake branch of the Chicago & Northwestern railroad. Mr. Dodero has purchased the timber on seventeen forties and will operate one camp of forty men. The rest of the cut will be sublet.

Charles H. Lake, who recently moved from Chicago to Marinette, Wis., and became actively engaged in the management of the Grimmer Land Company of that city, was found dead in his home on November 13. Mr. Lake had been shot through the head and a revolver was found clutched in his right hand. He was a son-in-law of Perley Lowe, a well known lumberman of Chicago and Peshtigo, Wis.

John Jensen, proprietor of the Kaukauna Lumber & Manufacturing Company, Kaukauna, Wis., died recently after a long illness from diabetes. He was eighty-three years old and a native of Holland. He came to Wisconsin in 1848 and was a pioneer in the northern lumber industry. The Kaukauna business was established in 1867.

The American Standardized House Company, Milwaukee, has been incorporated with a capital stock of \$25,000 by Edward C. Knoernschild, Gustav M. Hafenbrack and T. W. Brazeau. The company will engage in the promotion of home building along a uniform design and plan which its members recently have perfected.

The Hardwood Market

< CHICAGO >

The car shortage is materially holding down stocks arriving in Chicago and is of great assistance in holding up prices. The trade locally in hardwoods continues firm in quotations in spite of a growing seriousness in yards and similar trade. Low grades finding their way to Chicago move without difficulty into box and crating factories, but the higher grades as heretofore, especially for building purposes, are not so active.

Do YOU Use 'HONOR' LUMBER?

It is not merely that we know how. The important thing is that we sincerely endeavor to put a knowledge coming from long years of experience into quality for your benefit—not into manipulation for our benefit.

Will you test the statement (if you don't already know) on some of these items of "Honor" stock.

Local lumbermen are speaking encouragingly of increased use of hardwoods for purposes having to do with the war and as a whole there is a surprisingly small amount of pessimism in regard to the whole situation. It is freely and confidently predicted that next year's prices will set a new mark, the arguments supporting such contention seeming to have a sound basis.

< BUFFALO >

A better demand for hardwoods is being enjoyed at the local yards, but it is confined largely to a limited list of woods which are wanted by manufacturers whose activities are increasing because of the war. Here and there are concerns which are rushed with business and increasing their output of materials needed for army or navy, but there is less activity than usual in the building and furniture lines, with the probability that they will continue to operate below normal for some time. Furniture manufacturers are uneasy over the possibility that soon they will have to curtail their operations, if they do not have to shut down entirely. The building line is unable to get the material to erect large steel structures, such as usually require hardwood interiors.

The tendency to cut down building is shown to a large extent in the flooring trade. The demand for maple flooring for use in factories is said to be on a fair scale, but a falling off in the oak flooring trade has occurred and prices are said to be easier.

Shortage of cars at the southern mills is holding back shipments of oak, poplar, cypress and other woods for this market, so that it is difficult for the wholesale yards to carry complete assortments, though they are getting in lumber right along and stocks here will compare very favorably with those elsewhere. The northern hardwoods, especially birch and maple, are in fairly good demand.

< PITTSBURGH >

Hardwood men are getting a better price for their stock in general than wholesalers in pine and hemlock. On most lines of hardwood the tendency of prices is strongly upward. Oak in particular is paying mighty well, and there is no question but that oak stocks are uniformly scarce. Tri-state mills are not accumulating any hardwood to speak of and with the difficulty they find in getting labor and the fearful shortage of cars they are having their own trouble to get out enough special stock for the customers. Manufacturing trade is fair but not what it should be. Yard trade is very quiet and little is expected from this source until after the inventory season is completed.

< BOSTON >

One of the principal features of the hardwood market is the sustained advances in the value of plain oak, the increase being relatively greater in high grades than in the common. The problem of finding a wood of suitable qualifications for airplanes has developed a potential value in several domestic and foreign woods, among the latter, West Indian marabilla is represented as combining many of the required features. Trade has continued fairly steady within the many limitations now prevailing, but it is felt generally among the dealers that transportation and other unfavorable elements will grow more serious in the near future, especially for New England trade to industrial and building customers.

< BALTIMORE >

The hardwood situation appears to be rather mixed. Some members of the trade report that they have plenty of orders, while others state that the volume of business has narrowed considerably, and they are taking on only such stocks as are necessary to complete assortments. Both classes, however, are unanimous in the declaration that the railroad end of the business leaves much to be desired. Various important sections are embargoed to an extent that makes it almost impossible to get stocks into the territory. Those members who report business fair, however, say that in certain directions the inquiry is decidedly gratifying. Concerns turning out articles classed as luxuries are quite busy. Pianos, for instance, and graphophones are stated to be having a big sale, and the factories engaged in their production are running full time. There is also a good demand for furniture and other household articles. The reason for this activity is sought in the high wages paid by munition plants and others that have been stimulated by the war. Similarly, Canada is reported to be a larger buyer of hardwoods than before, the Dominion evidently having adjusted itself to war conditions and again developed wants that were held in abeyance for a time. Business continues to come in with sufficient freedom to keep the mills going, but the sellers never have many orders for future delivery. The range of prices appears to be well maintained on all the woods in general use. Low grades of poplar are decidedly active, large quantities of such stocks going into the manufacture of boxes, for which there is a big demand. Even the high grades have been quickened, and the returns are very satisfactory. The rest of the list is firm, dealers who happen to be in a position to make delivery having no trouble to get attractive prices.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

◀ COLUMBUS ▶

The hardwood trade in Ohio territory continues firm in every regard. Buying on the part of the factories is the best feature, although quite a few orders from the retail trade are being booked. On the whole the movement is slightly larger than was the case several weeks back and prospects are bright.

Factories making furniture and boxes are the best customers, though some buying is being done by implement concerns. Buying on the part of the factories is largely from hand to mouth, as many of the concerns are not stocking up to any extent. Retail stocks are fair, although some orders to replenish broken stocks have been received. A large majority of retail orders are for immediate shipment.

The car shortage and railroad congestion are causing much trouble in shipping circles. Embargoes on many roads, especially in the South, have effectively held up shipments from many of the hardwood centers. Lack of motive power is given as another cause for this state of affairs. Collections are generally good, as money remains easy.

Prices are firm along the line and every change has been toward higher levels. This is especially true of poplar, where much strength is developed in the lower grades. Quartered oak is strong and a considerable volume of business is reported. Plain oak stocks are in good demand at unchanged quotations. Other hardwoods are unchanged.

◀ CLEVELAND ▶

All descriptions of hardwoods are much higher and with no indications of immediate replenishment; predictions are for a still stronger market in all lines. Unusually warm weather, following the coldest October on record, has stimulated building, especially the small house construction, which is taking a lot of all descriptions of the lower grades for interior finishing. From information received here by the transportation department of the Cleveland Chamber of Commerce from Washington, the belief is that a car shortage such as has had no equal so far will develop before the end of the year, and as lack of transportation is the prime factor in keeping down receipts here, no relief from the high market is looked for. Principal demand at present is for oak and maple flooring, and there is not much being offered even at the higher figures. Several firms here are urging producers to increase their shipments before the predicted car shortage develops, but advices from the coast show that few products from that district will be available, as only 70,000,000 feet of logs have gone through the mills this fall, against last year's showing of more than 300,000,000 feet.

◀ INDIANAPOLIS ▶

The hardwood market is described as erratic with consumption curtailed along the customary lines and considerable activity in departments affected by the filling of war orders. The demand from the furniture trade and other consuming plants is not so heavy as it was a year ago. On the other hand many new channels of trade are springing into existence.

Considerable disagreement exists among the hardwood manufacturers relative to the volume of business being done with the furniture industries. Some dealers report a fairly active demand while others say it is slow. The trade believes that the business of furniture industries is heavier than might be expected from the prevailing sales and that the furniture factories are trying to use up old stocks before becoming active buyers.

It becomes more apparent continually that war orders in central Indiana are proving an important factor in the hardwood demand. Many companies which heretofore have been only small consumers are buying heavily.

Building operations are almost a negligible quantity. Oak flooring manufacturers are reporting a dull business, and the sash and door trade is inactive. The box factory demand is unusually heavy and gives every promise of improving. Oak, elm, and hickory are in the best demand.

Car shortage conditions gradually become more acute but the mills report a fair supply of logs on hand. The weather still is favorable for logging, and timber buyers are active. A serious labor shortage threatens operation in many plants while the coal shortage also provides a serious problem.

◀ MEMPHIS ▶

There is considerable irregularity to the hardwood market, irregularity as to the flow of orders and irregularity as to shipments. "We get a good bunch of orders for a few days and then nothing for some time" is the way one prominent firm sizes up the situation. Inquiries are coming forward at a pretty good rate and private consumers are in the market for considerable quantities of stock. This is admitted on all sides. But there is increasing difficulty in filling such orders because cars are very hard to secure for the handling of lumber to private industries not identified, either directly or indirectly, with the winning of the war. Lumber interests here are fully alive to this fact and for this reason they are devoting increasing attention to government orders, the cars for which are furnished as needed. Some are beginning to cut only such lumber and timbers as will meet the requirements of the government, while all are paying far more heed to government needs and government specifications than at any previous time since the war began. The enlargement of the Southern

Hardwood Emergency Bureau and the reorganization of this body, together with the plans it has for taking government orders and distributing them among the hardwood trade, represent a long step forward in the mobilization of the entire hardwood industry squarely behind the government, and far more definite results, in the way of orders, are expected by Memphis lumbermen.

Meantime low-grade cottonwood and gum are in an exceptionally strong position because the box manufacturers continue to do an unusual volume of business. All manufacturers of wooden containers, whether barrels or boxes, are engaged at capacity and are running on fuller time than ever before. They believe that there will be uninterruptedly good business for an indefinite period and they are making their plans accordingly. They are not able to get all the low-grade cottonwood and gum they need and they are therefore using considerable quantities of other low-grade stock. There is a rather better demand reported for the higher grades of plain and quartered oak as well as for veneers, whether walnut or gum or oak. Plain oak is in excellent call in stock thicker than 4/4. Inch oak, however, feels the influence of the slackness in the flooring trade and is moving rather slowly. Sap gum in certain dimensions is very much wanted. Ash is also moving well.

Government orders are beginning to be received here in larger numbers and it is anticipated that there will be large requirements of the government filled in the Memphis market in the near future. Intimations are becoming pretty strong that some large orders are on the eve of being distributed. Memphis lumbermen are ready to co-operate with the government in every way as indicated by the action of the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association, recorded elsewhere in this issue of the HARDWOOD RECORD. These two organizations together embrace practically all of the hardwood trade of Memphis and vicinity.

< NASHVILLE >

No material changes have been noted in the hardwood trade in this market. The main feature of business is the demand for government requirements, with oak, ash, hickory and walnut in much request. There is some movement of poplar and chestnut. The box business has been unusually active. Mills are having difficulty in securing labor. Those plants that are pressed with orders in which the government is interested are working overtime. The shortage of labor is having effect in curtailing the supply of logs. The transportation situation is little changed. Shipments for the government are being handled, but other orders meet with embargoes or delays. The eastern territory particularly is affected by the embargoes. There is little change in prices, manufacturers taking the view that lower prices will not increase the volume of business.

< LOUISVILLE >

There has been considerable improvement in orders during the past two weeks, and the majority of the hardwood concerns are busy. Government orders are heavy, and there has been a revival in the demand from furniture and other manufacturers who are afraid that new regulations may shut off their supply of material. Everyone is trying to get lumber, and the wires are being kept hot with S. O. S. calls for immediate shipment. Traffic conditions are bad, cars are scarce, embargoes are holding back shipments into eastern territory, and lumber is not moving out so freely as it should. The big demand at this time is for ash and oak, while gum and poplar are both very active. Wagon and auto stock are in excellent demand, thick ash being especially good. The labor situation is easing up in the South, but logs are scarce as cars to bring them to the mills can hardly be obtained, and even though labor is more plentiful there has not been any great increase in production at the mills, some of which were almost closed down for lack of labor for a time. In the finer hardwoods there is a fair demand for maple and mahogany, but most of the walnut at the present time is being taken by the government for airplane and gunstock use. Veneers are active, and the mills have no complaint to make other than the traffic situation. Orders are much better than had been expected, and are profitable, as the mills are not tied up on old futures, and are not accepting futures that run for any length of time. Therefore, operators are obtaining the market price for shipments, and markets are high and going higher.

< MILWAUKEE >

Latest reports reaching Milwaukee from the logging camps in northern Wisconsin and Michigan indicate that despite probably the most unfavorable conditions which ever have confronted lumber operators, the winter's cut is expected to be up to early-season estimates and considerably above the average for the last few years. The acute shortage of labor has been in part overcome by the upward revision of the wage scale, in response to which hundreds of men have become available for woods work. The shortage of cars and congestion of railroad traffic is growing worse and is showing its effects upon the industry, particularly with respect to inadequate log supplies at mills. The absence of snow also is hampering logging operations.

The demand for hardwoods of all kinds is excellent and it is said that mills could dispose of twice their present output if the facilities and logs were available. Prices are holding very firm and advances are looked for.

NORTHERN MANUFACTURERS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
 VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

We have the following for sale

Three Great Logging Conventions

The Pacific Logging Congress met this year at Seattle, Wash., on October 18th, 19th and 20th.

The Appalachian Logging Congress met at Knoxville, Tenn., on November 21, 22 and 23.

The Southern Logging Association met at New Orleans, La., on October 24th, 25th and 26th.

FULL REPORTS OF
ALL THREE WILL
APPEAR IN LOGGING
FOR NOVEMBER &
DECEMBER, 1917

Send for sample copies of these two numbers—they will cost you nothing and the **ideas** they will contain may be worth thousands to you in addition to helping you to meet Wartime emergencies in the one best way.

CLYDE IRON WORKS

MANUFACTURERS OF LOGGING MACHINES
DULUTH, MINNESOTA

ATCO EXCEPTIONAL SERVICE

DID it ever strike you that you could save money if you could supply all your southern hardwood needs from one company?

Of course we can't supply the entire hardwood market, but with

*Our own timber,
Our own log transportation equipment,
Five big band mills,
Half a dozen veneer machines,
A big panel factory,
And carefully trained labor that we have been
able to KEEP,*

we are able to concentrate *your* shipments from one point.

If *you* are satisfied that parceling your orders out broadcast has resulted in money loss, in upsetting of your plans, in uncertainty and in higher prices, consider the statement that

A company handling your *whole* list can operate more economically and smoothly — with minimum prices and maximum service to you — if the size of its orders is in proportion to its ability to handle them.

This economic truism holds in your business — why not in ours? Try it out on your present needs.

WAR-TIME ECONOMY*

Help the Allies by Using Less

BUTTER

Cut the slice thinner. One pound makes 48 one-third ounce pieces.

SUGAR

Use less per day. Do without candy.

WHEAT

Have one wheatless meal per day.

MEAT

Have two fish days and one meatless day per week.

**Economy means wise expenditure of time, money, or energy. Waste is failure to use food materials to the best advantage.*

Michigan Hardwoods

Cadillac Quality

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

Manufacturer and Wholesaler

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.

The J. M. Logan Lumber Company, Knoxville, Tenn.

The Little River Lumber Company, Townsend, Tenn.

The Babcock Lumber & Land Company, Marysville, Tenn.

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Wide Search for Furniture Woods

THE manufacturers of furniture have surpassed most manufacturers in the thoroughness of their search for woods suited to other business. So great is the difference in furniture, between the very cheap and the very expensive, that every timbered region of the world has been searched for something new or something better. The progressive furniture maker is never satisfied with what he has so long as he has reason to believe that something better is possible, and that accounts for the wide search for new woods or for the old kinds of woods in finer quality than those in use. Samples from widely separated regions are brought together for comparison, and from the many thus assembled, the few choice selections are made. Foreign and domestic woods are compared side by side in this sifting process.

In a contest of that kind the southern hardwoods always occupy a prominent place and receive great consideration.

Their substantial character, beauty of color and grain, their economical sizes, good seasoning qualities, and their abundance and convenience, give them advantages not possessed by furniture woods of many other regions.

The furniture maker is naturally and properly influenced to a large extent by supply. He does not think it worth while to build up a trade in furniture made of certain kinds and grades of wood, if the supply is so limited that he cannot depend upon securing similar woods to fill future orders.

This is a strong point in favor of Memphis as a furniture wood center; it has the supply. An order once filled, can be filled again and again.

To Be Continued

GUARANTEES

There is a difference in them — not alone in wording and salesmanship, but in intent, in actual service and in ability to perform.

The Grand Rapids Vapor Kiln guarantee is based on a scientific measurement; it is original and the result of our thirty years' experience in wood-working.

We know the difference between ordinary kiln operation and ordinary guarantees, and we know you do want dependable guarantees based on real service and tests.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company

Vol. XLIV

CHICAGO, DECEMBER 10, 1917

No. 4

Review and Outlook

General Market Conditions

STOCK REPORTS show ever-increasing restriction in the manufacture of lumber meeting requirements of commercial consumption. This curtailment is brought about automatically in a measure and in a measure by conscious effort on the part of producers. The evergrowing demand from Washington is turning more and more of sawmill capacity to the production of larger sizes of special specifications and away from normal lines.

Many millions of feet of hardwood lumber are piled up at mill points awaiting shipment on orders which were booked some time ago. There has been very little tendency toward cancellation of these orders and any wholesale cancellation is altogether unlikely, as there is a growing realization that normal distribution of hardwood stocks will be a scarce article in the months to come. Then again the lumber trade is consciously adopting the policy of restricting its cut of normal sizes so far as is possible, both in order to conserve capacity for government production, and to hold down its stocks of sizes normally used in commercial work.

Thus the prospect is that the new year will see a tendency toward higher values than ever and toward a greater production in selling effort necessary to place orders for lumber manufactured. The concentration will be on lumber movements and the prospective present is anything but rosy for the shipment of stocks going to commercial plants. And such stocks must take their turn of filling in between the movements on war business, and in comparison to the past these shipments will be extremely infrequent.

The menace of insufficient labor is growing more and more ominous, and altogether producers in all lines are coming to realize more keenly their present and future dependence upon government business.

The latter field presents an exceptionally rosy prospect for lumber manufacturers who are manufacturing millions of feet in directions never counted upon heretofore. The big problem before lumber manufacturers is in fact to analyze the tendency in the making over of manufacture to war purposes, and to determine just wherein this making over will affect markets for lumber.

The automobile business presents a striking instance of this, as curtailment in so-called pleasure car construction will not result in idle plant facilities, but rather in the turning of those facilities from production of pleasure cars with very little woodwork to trucks and other working equipment using substantial amounts of woodwork.

Along the same lines the prospect of curtailment or cessation of the manufacture of articles from the famous 500 list does not present a blank or black future, but rather suggests a new course

of events to which the lumbermen must shape their policies and manufacturing methods. It is safe to say that very few war articles and very little war equipment can be made or shipped without the use of substantial quantities of wood.

If sawmills are forced into idleness it will be because those in charge are not in touch with new developments or because of labor or shipping difficulties. It will not be because there are insufficient markets available.

The big task before the country today is to produce as never before. Our success in the war and in commercial development after the war will be in direct proportion to our increased production. A large measure of this production will be in new channels, and those channels converging at Washington will be of first consideration. Production in normal commercial courses must take what is left in materials and in shipping facilities.

Are You Conserving Coal?

A RECENT GOVERNMENT PUBLICATION STATES that 600,000,000 tons of coal were mined in the United States in 1916. It says that assuming only one-half of this to have been used for industrial boiler plants, there are 75,000,000 tons of coal wasted every year, as about one-fourth of the coal consumed in industrial operations is lost through inefficient methods. Seventy-five million tons of coal require 1,500,000 fifty-ton freight cars to move it.

Do you believe that your furnaces are operating as efficiently as possible? If you merely believe this and do not actually know it, consider the following case cited as illustrating a fair average throughout the country:

One steel mill showed a waste of 40,000 tons a year, which at five dollars valuation cost that company \$200,000. This was a modern plant and the load factor was unusually favorable to high efficiency. Efficiency could easily have been raised to 75 per cent, but a fourteen-day test showed that the boilers and furnaces were operating on 55 per cent efficiency.

This government paper coming from an authoritative source rather indicates that efficiency may be taken into consideration in the future in the government's allotting of coal for different plants. Under present conditions a plant which carelessly operates at an efficiency of 40 to 50 per cent receives from the government the same consideration in the delivery of coal as one whose efficiency is 70 to 75 per cent. This obviously is unfair as well as wasteful.

Operators using coal, no matter who they are or where they may be, should bear in mind that this situation may be brought about by inefficient methods of coal burning whereby the available coal.

may be in direct proportion to the percentage of efficiency revealed.

Aside from the selfish standpoint is the bigger motive for saving the realization that conservation of coal is essential for patriotic reasons. Furthermore, there is no excuse for waste, as there is ample information available to any one who is interested in finding means for fuel saving.

Changing Over the Factory

NOBODY KNOWS what may be the immediate future for the list of 500 articles pronounced by the government to be unnecessary to the prosecution of war. It is argued in some quarters that the government cannot curtail normal industries or, at least, eliminate them, as by so doing it will eliminate too much revenue. But it is a pretty safe guess that a substantial percentage of production of these 500 articles will be cut off and the producing capacity thus gained will be turned to war purposes.

Needless to say the line of war work in which the various factories will be employed will correspond as closely as possible to the type of work which those plants have been doing in the past. Those woodworking factories taken off their normal lines of production will be put onto work that will make possible the utilization of their machines, equipment and employes in the same capacities as they have been operating in under normal manufacture.

Regardless of this, however, any factory taken off from its usual line of production (for instance, if the furniture factories switched from the manufacture of furniture to some form of war material or equipment), will be compelled to undergo radical changes in its methods and in its manner of working new materials, for it is safe to say that in very few cases will the same raw material be employed as was employed in the production of commercial products. The question then which every woodworker should ask himself is: "What is the probable line in which my facilities will be employed if turned to government use," and "In what position am I to most quickly and economically switch my manufacture into that direction?"

Many factories are undoubtedly in more or less of a groove of production, their knowledge of woodworking being limited to the line to which they have adhered for years. It is up to them, then, first to analyze so far as is possible, the probable direction in which they will be switched, and then to go as far as they can into a study of the raw materials and the methods which will be required in handling the new line of work.

The planing mill industry has been brought to a standstill by the cessation of building operations. Have the planing mill people made any concrete effort to ascertain just how their facilities can be put back into producing condition on government business?

The furniture industry is No. 52 on the list of 500 articles classed as unnecessary. Should not the furniture people as a body then do everything they can to ascertain what the probable immediate future holds for them, and determine how their plants may best be turned to government account if government regulations limit the production in their normal lines?

It is inconceivable that the government will arbitrarily force into idleness any important manufacturing industry. Sustained production in one direction or another is the basis on which the successful outcome of the war will rest. As it seems inevitable that normal manufacture may be restricted or limited, is it any more than good business for woodworkers who are likely to be affected by government restrictions to take the initiative and ascertain now just how they can continue to make their capital work for them in the future?

A Time for Working Together

NEW CONDITIONS IN THE LUMBER BUSINESS HAVE brought on a variety of problems and have laid open to criticism some of the present methods of meeting conditions. The last five years have seen a marked development in the local association idea. An association designed to effect one set of conditions is undoubtedly the logical manner of handling problems

peculiar to the manufacture or marketing of any one wood, but it seems probable from circumstances developing in the last few months that the progress has not been so marked as had been supposed by enthusiastic association workers. In fact, the lumber trade, particularly in its bids on government war business, has on several occasions made itself rather ridiculous and has frequently shown a state of mind that rather puts it in the proverbial glass house when it is throwing stones at government purchasing bodies or actuated by purely theoretical knowledge of lumber or lumber values.

It would be possible to cite many cases where the lumbermen themselves have revealed an astonishing paucity of information as to their own business; of appreciation of proper values for their own goods. For instance: Lumbermen have been agitating that the government is too low or too high in its figures on fair valuation of lumber products requisitioned for government use. How can government officials not in the lumber business state a fair valuation on a class of lumber when a group of lumbermen in one large southern city submitted bids on the same product ranging from \$115 to \$155. The government officials can draw one of two conclusions from such evidence. Namely, that those bidding have no knowledge of their own product, or what it is worth, or on the other hand that some people submitting bids are endeavoring to get prices far above what the material is actually worth.

As far as the facts are concerned, though, it is quite likely that the first opinion would be the correct one.

Lumbermen in the section referred to have had the benefit of association statistics of a very exacting and accurate character covering market values and supplies on just the character of wood asked for by the government. They should have known what their product was worth and there should not have been a difference of more than ten dollars a thousand at the outside.

The whole thing resolves itself into the question of persistent work on cost figures, of analysis and not mere filing of market data and of sales based on such analysis. A more sincere co-operation is necessary and this can be brought about only by more frequent informal gatherings for the designation of values on lumber products submitted for government use so that bids at least intelligently on their face may be submitted. The situation will be far more serious if left in the present state than as indicated by the mere confusion resulting.

It is very apparent that if the government received such a variety of figures on a lumber product, it will very soon come to the conclusion it is not profitable to use lumber when other materials can be used, and hence government markets for lumber will be restricted to the lowest possible point.

Illustrating that lumbermen are not using association statistics which they receive, the experience of one large wholesaler buying certain types of heavy oak is striking. He recited recently his observations on a protracted trip through southern producing points, and made the statement that he called on practically every member of the oak association and in every case was asked to name the price which he thought fair. These transactions took place with men who have at their command market statistics covering oak, which should indicate to them the exact market value of the product which this man was purchasing. They should have been in position to immediately name him a figure which they knew to be fair and would adhere to. In place of that, though, they let him do the figuring, and as he was purchasing naturally at as favorable a figure to him as possible, the results varied with the circumstances in each case.

New associations can be formed every day, but all will be futile unless each member makes a conscientious effort to adhere to the policies laid down by the associations or the association to which he belongs.

The best reading room for an employe, or any one else, for that matter, is in his own home. Getting the reading habit is the main thing; the room will provide for itself till the man is sufficiently inspired to take care of it without any urging.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

There are already two competing hardwood emergency bureaus in the field here to help the government win the war and help the hardwood industry get some of the benefits of the enormous war business that is being transacted, and there is reported to be a third hardwood bureau in prospect.

Hardly had J. M. Pritchard got settled in his new position as manager of the Southern Hardwood Emergency Bureau when Roy H. Jones of Chicago arrived in town and opened an office for the Northern Hardwood Emergency Bureau in room 304 Ouray building. Frank Fish, secretary of the National Hardwood Association, has been in town for a few days looking over the field and conferring with members of the staff of Director of Lumber Downman of the Council of National Defense, regarding the possible establishment of a bureau here to handle government business for members of the National Hardwood Lumber Association. Mr. Fish's plans are not yet definitely known among well informed lumbermen here.

Mr. Jones represents the consolidated interests formerly concerned in the old Northern Hardwood & Hemlock Emergency Bureau and the Michigan Hardwood Manufacturers' Association. He said that O. T. Swan of the Northern Hemlock and Hardwood association and J. H. Bigelow of the Michigan association, are running the affairs of the bureau back home, but that he expects to remain here indefinitely looking out for war business for the Michigan and Wisconsin hardwood lumber manufacturers. He lost no time in getting in touch with the various departments of the government that are purchasing hardwood lumber and articles made therefrom and with representatives of the allied purchasing agencies in this country. He expressed the opinion that there is a big field for northern hardwoods in the war plans of the allies, which field he hopes to assist in having developed for the mutual advantage of the anti-Teutonic nations and the hardwood industry of the Lake states.

There is believed to be enough black walnut lumber for the present requisitions of the United States government for the manufacture of gunstocks, but the supply will not last indefinitely as the armies of America are expanded. The northern hardwood manufacturers will come in with their hard maple and birch, which are suitable for gunstocks. Maple, gum and birch gunstocks are understood to have been tested for the war department, partly by ordnance officers and partly by the Forest Service Laboratory at Madison, Wis. Some of the tests have shown satisfactory results; others have not, it is said. The fear was expressed by an allied army officer that "if you wiped a Boche over the head" with a maple gunstock it might break. However, the maple people are hopeful of doing considerable business with the allies' purchasing officers.

Basswood will continue to be used as saddle trees in the mounted service of America. The Gum Manufacturers' Association has submitted samples of gum gunstocks and saddle trees to the War Department.

Navy hardwood needs include a new lot of 1,000,000 feet more or less of oak, ash, and other lumber for yard stocks chiefly, in addition to the contracts recently awarded. There is special interest in the so-called ditty boxes that are provided by the government for men in the navy to keep little personal belongings in. They are boxes made of hardwood perhaps two feet long, a foot wide and not quite that deep, and fitted with a tray.

The Southern Hardwood Emergency Bureau recently received an order for considerable stock for American military uses abroad. Manager Pritchard said he did not feel at liberty to say what the material is, owing to the new policy of withholding information regarding government military export business. Mr. Pritchard, however, has been negotiating recently with government and other people regarding a big lot of railroad ties for military lines.

It is learned that the order for 700,000 feet of heavy oak lumber placed with the Southern Hardwood bureau some time ago for ex-

port, was intended to cut into spokes, felloes, rims, hubs and other vehicle parts to be used in the manufacture and repair of military vehicles and artillery carriages of the United States army in France, at big woodworking establishments being planned by the War Department for over there.

Enlarging Quarters to Take Care of Business

Mr. Pritchard expects the hardwood war business to grow in volume. He predicts that the wholesale hardwood men will be called upon to help the government in case of an emergency. He is personally an advocate of co-operation in the hardwood trade, rather than competition. He says that his policy will be to give the government all the help the industry can give, to furnish it with information as to what the industry can do, what it has to sell, what it can produce, where, how, when and at what price. If materials asked for are not available he will suggest substitutes.

Both of the hardwood bureaus so far opened, it is stated authoritatively, will be operated along lines similar to those followed by other lumber trade emergency bureaus here. Orders received will be distributed among the members of the respective bureaus, upon the basis of their capacity, their timber supply, facilities for shipment, transportation rates, and other conditions.

The Southern Hardwood Emergency Bureau has obtained larger quarters in the Munsey building.

Priority Given to War Supplies

Curtailment of the furniture industry as relatively unessential was clearly indicated to a group of furniture manufacturers who were here recently to look into the situation. However, no drastic action is expected. The system of dealing with the nonessential industry question, it is understood, will not be to brand certain industries or products as unessential, but simply to give priority of production and shipment to articles that are deemed essential.

Furniture factories and other woodworking establishments, it is believed, can be readily converted to the production of airplane propellers and parts of airplanes, truck bodies, gunstocks, ship fittings, boxes and packing cases, saddle trees, army lockers, etc., which are needed in great quantities to equip America and the allies for war. If there is lumber enough, coal enough, transportation enough and labor enough to enable such establishments to make articles relatively unessential it is stated that probably there will be no government command prohibiting such production. But the intention is to give priority to munitions, other war materials and supplies, food, steel and other essential government stuff.

When shortage of raw material or coal threatens an industry with curtailment or suspension, it is announced that the commercial economy board of the Council of National Defense will inform all such manufacturers of the crisis. There will be opportunity for parties interested to be heard before any sort of action is taken.

Details of this work will be carried on by the bureau of manufacturing resources now being organized in the Council of National Defense. This bureau will have representatives of basic industries connected with it to advise about conditions in those industries, so that no bad "bulls" will be made in deciding questions of essential and nonessential industries.

Transportation Problem

Having had for some months absolute control over the export trade of the country, the administration has just assumed control over the import trade. President Wilson has issued a proclamation under the trading with the enemy act which requires that imports of many articles may not be made without license from the War Trade Board. The effect of this policy will be to conserve the available shipping tonnage for the importation of essential raw materials and products like wool, rubber, tin, leather, etc., so far as may be necessary.

The war trade board has announced that a number of articles may be exported without individual license to any country except

enemy countries, when the shipments are covered by railroad or ocean bill of lading marked "for export" and dated up to December 1. The articles include calipers, wood alcohol, quebracho and chestnut extracts, etc.

A hundred million dollar appropriation for government freight cars to relieve the freight congestion in this country is the proposal submitted by Senator Reed of Missouri to Congress. The senator fears that the transportation system of the country will break down unless some such extraordinary step is taken by the government. Naturally the lumbermen are in favor of the government freight car program, which they believe will cause a big demand for timber and lumber. Plans for a standard wooden freight car have already been submitted to the government on behalf of certain lumber interests.

The Box Men Active

More hardwood possibilities are seen in plans that are under way for mobilizing the box industry of the country. F. C. Gifford, secretary of the National Association of Box Manufacturers, D. L. Goodwillie of Chicago and other box manufacturers have been here talking with the lumber committee, government officials, and others regarding the organization of a committee or emergency bureau representing the box industry, to help the government. It is stated in behalf of the box people that government box specifications are impossible and should be modified, simplified and standardized, so that every possible wood could be used and every possible box factory employed in making boxes for carrying shells, cartridges, rifles, and other arms, equipment, food, materials and supplies of all kinds. It is predicted by some box men that 25 or 50 per cent of the wooden box production of the country will be required to fill government war needs. Billions of feet of lumber will be needed for these boxes. The new specifications for ordnance packing boxes do not please box manufacturers, who say that their details are impracticable.

The War Department is reported to have decided that all purchases of lumber for cantonment and other military construction work must be ordered through the Cantonment Division here, which would stop considerable purchases that have been made in the field by depot quartermasters and other army purchasing officers with the result that it is claimed that market conditions have been upset and prices run up to high levels.

The department has opened bids for collapsible and portable houses, hospitals and other buildings for the American armies abroad. Officers of various lumber trade emergency bureaus are in conference with representatives of the Engineer Supply Depot here, which is handling this business. The National Wholesale Sash and Door Association hopes to supply the sash and doors for the portable buildings.

This association, by the way, recently sent G. L. Curtis of Clinton, Iowa; J. E. Morgan of Oshkosh, Wis., and A. J. Siegel of St. Louis to Washington as a committee to see about a rumored government policy directed against individual building operations as unessential. The committee reported that there had been no decision to that effect, but there is a general feeling among people here who are in touch with the government war plans and preparations that a great many industrial operations and activities that are essential and normal in peace time are not unlikely to be directed into other lines by co-operation between the industries and the war authorities of the government.

A report on employers' housing in the United States recently issued by the bureau of labor statistics shows that wood is the favorite building material for this purpose. In the case of the companies and industries whose housing operations were covered by the investigations reported upon, 89.8 per cent of the employees' "compulsory" houses were of frame, 6.1 per cent of brick and 4.1 per cent of other construction.

The present government program of building and requisitioning ships in the building yards calling for 1,409 vessels of 8,363,000 tons deadweight capacity to be completed by December 31, 1918, calls for 375 wooden ships of 1,330,000 tons deadweight capacity and 58 composite ships of 207,000 tons deadweight capacity. The

latter vessels are steel framed and wooden planking sides, bottom and decks.

In order to prevent delay in transcontinental shipment of 30,000,000 feet of fir timber for wooden ships building on the Atlantic coast for the government, it is reported that the officials have decided to pay the full commercial freight rate of \$25 per 1,000 feet approximately, rather than take chances on confusion and difficulty incident to routing by certain lines at the special land grant rate of \$17 per 1,000 feet to which Uncle Sam is entitled. The decision means an addition of \$240,000 to the freight bill on this material.

The Question of Prices

Prices paid by the government for lumber for cantonment and for other construction purposes are to remain unchanged from December 10 to January 10, if the recommendation of R. H. Downman is adopted by government authorities, as it is believed it will be. The understanding of lumbermen is that the Federal Trade Commission will determine whether any increase in cost of production during the month indicated above occurs, as compared with the production cost average for September, October and November and the prices will be readjusted accordingly. The same procedure will be followed as to government prices to be paid during the month, February 10 to March 10. The prices to be paid after March 10 will be the result of a new deal to be made later on. By that time there may be new legislation on the statute books authorizing the fixing of prices of a great many commodities during the war by executive order. There is said to be no authority now for fixing prices to the public, except of coal and food, although prices of some metals to the consumer have been fixed by agreement between the producers and the president. The latter is to press for legislation greatly broadening the authority of the executive branch of the government over prices.

Prices of lumber sold to the United States government and its allies are to be fixed by government action, according to the present understanding, but prices to the public may not be so fixed at present. There has been some discussion of the policy of fixing prices for the public, and some have thought that the president favored such a plan, but officials of the War Industries Board, which is the price fixing medium of the government, doubt whether it would be practicable to fix prices to the public, buying as it does through 150,000 retail lumber yards. There is said to be a lack of necessary data that would enable the government to act intelligently on the question.

However, the matter has been attracting considerable attention in view of meetings here among a number of lumbermen, hearings they have had before the Federal Trade Commission and conferences with officials of the War Industries Board, all of which are practically coincident with President Wilson's annual address to Congress, in which he declared that the law of supply and demand has given way to the law of "unrestrained selfishness" and advocated extension of the policy of government price fixing that has been practiced as regards steel, copper, coal, etc., and particularly suggested the commodities which the farmers of the country must purchase as needing regulation as to prices. One of the most important of the commodities used by the farmers is lumber.

The lumbermen here for these hearings, conferences and meetings have been chiefly pine and fir manufacturers, but the principles or propositions they have discussed with reference to the cost of production have application to all branches of the lumber industry.

Cost of Production

At the hearing before the trade commission recently Gen. L. C. Boyle, representing various lumbermen, spoke, as did C. S. Keith, president of the Southern Pine Association, and representatives of other groups, including W. H. Wood, of Birmingham, Ala., who said that offices will be opened here by the Alabama-Mississippi Emergency Bureau, with a view to sharing in the government business.

Lumbermen said after the hearing that it was satisfactory, although it is not understood that there was complete harmony between the lumbermen and the commission or its experts on certain

principles involved in the determination of the cost of production. Various factors entering into cost of production were discussed at the hearing and it is stated that there was substantial agreement between the commission and the lumbermen as to certain principles that are involved in the fixing of prices.

The lumbermen later held a number of meetings among themselves and appointed small committees to confer with Bernard Baruch, who has charge of raw materials questions for the War Industries Board, and R. H. Downman, director of lumber under the board. The Southern Pine committee consisted of C. S. Keith, W. H. Sullivan and R. A. Long; the Georgia-Florida committee, of M. L. Fleishel and R. M. Bond; the North Carolina Pine committee, of C. I. Millard and G. L. Hume; and the Douglas Fir Committee of A. L. Paine, George S. Long, and J. H. Bloedel.

The pine committees conferred at length on Tuesday and Wednesday with Messrs. Baruch and Downman. The fir committee conferred with the officials also. They discussed the prices to be charged to the government and the allies, it is understood, for lumber for cantonments and other construction work, for airplane construction, etc., but not for wooden ships. This last question is understood to be settled.

Lumbermen in Washington

The lumbermen here have been busy talking about contracts for collapsible houses for the American armies abroad, a matter which is under negotiation between the War Department, several lumber trade emergency bureaus, and representatives of sash and door interests and makers of portable houses, and others. Charles B. Harman of Atlanta, Ga., secretary of the Southern Sash, Door and Mill Work Manufacturers' Association, and Mr. Conway, representing that organization, are here on this matter, as is a Mr. Corey of Michigan, representing the McClure Portable House concern.

It is estimated that an annual cut of 7,000,000,000 or 8,000,000,000 feet of lumber have been represented at this week's hearings and conferences.

Hardwood lumbermen who have been foregathering for various business purposes, include J. B. Wall, president of the Buffalo Hardwood Lumber Co.; H. E. Montgomery of Buffalo, W. B. Burke of the Lamb-Fish Lumber Company, who came to relieve H. B. Weiss as the southern member of the subcommittee here with the Southern Hardwood Emergency Bureau; A. S. Johnson, Winfield, La., new southern member of the Southern hardwood bureau managing committee; Joe Lamb of Memphis, who is here on business; Frank Fish, secretary of the National Hardwood Association, and others.

Among the government orders recently placed for lumber war material is 500,000 feet California pine with Louis Wuichet of Chicago; 7,000,000 feet with the North Carolina pine bureau for construction work at Hogg Island, Newark, N. J.; and Big Point, Va.; 7,000,000 feet with the Douglas fir bureau for ordnance depots, warehouses, etc., at Curtis Bay, Md.; Raritan Bay, and Newark, N. J.; 5,500,000 feet with the southern pine bureau for Newark; and 2,000,000 feet to the Georgia-Florida bureau for Hogg Island.

E. G. Griggs of Tacoma, former president of the National Lumber Manufacturers' Association, has been told that he will soon be commissioned major in the army. Mr. Griggs understands that Col. Disque is to raise a force of 8,000 men as part of the army to assist in the production of ship and airplane lumber in the Pacific Northwest.

E. T. Allen of Portland, Ore., is here on business for the first time since he left the old lumber committee to go West as representative of the War Department in an effort to mobilize the spruce industry to assist in the aviation program.

W. H. Sullivan of Bogalusa, La., has been named chairman of a committee on war service to represent the lumber industry in co-operating with the War Industries Board in connection with plans to mobilize the industries of the nation for war work. Chairmen of similar committees in many other industries are announced, including the following: Philip Ebrenz, St. Louis, carriage maker; Charles A. Albrecht, Indianapolis, extension tables.

E. C. Miller, president of the Mueller Lumber Company, Davenport, Ia., was here recently in conference with other business men and officers of the War Industries Board regarding plans for converting so-called unessential industries in the Middle West into war production industries.

The Council of National Defense has written to the Chamber of Commerce of the United States suggesting that the various industries of the country should name war service committees to represent them in dealings with the government.

Shipbuilding Matters

The first annual report of the shipping board has this to say regarding wooden shipbuilding:

"Contracts were placed for a large number of wooden ships, most of them to be built in new yards, it being found that such ships could be built, within certain limits, without interfering with the steel ship program. The corporation has experienced some difficulty in arranging for supplies of proper lumber, but it is believed that this difficulty has been largely over-

come, and that the wooden ships may be expected to be completed with a fair degree of promptness."

Estimated expenditures under contracts in force October 31 include the following: Wooden hulls, \$101,200,000; wooden ships complete, \$33,100,000; composite ships, \$27,732,000.

The board makes some estimates of other expenditures as follows: Cost of fitting out wooden hulls as complete ships, \$200,000 each, or \$62,800,000 in all; cost of plants, equipment and ways for wooden shipbuilding \$3,360,000.

J. M. Pritchard, manager of the Southern Hardwood Emergency Bureau, continues to get orders for government material, but does not make them public. There are now busy here in the southern hardwood bureau W. E. Delaney, W. B. Burke, H. B. Weiss, and others.

The executive committee and others of the National Association of Box Manufacturers have been conferring here several days recently about how to help the government and at the same time benefit the box industry. Some of the box men saw Mr. Downman, C. H. Worcester, his assistant, and B. M. Baruch, in charge of raw materials for the War Industries Board.

The box men want to place their facilities at the disposal of the government and they believe they can best help in the war if the box industry is consulted about how government box specifications should be drafted. They want one of their number attached to the War Industries Board, it is reported. The plan was for him to get in touch with George N. Peek, of Moline, Ill., vice-president of Deere & Co., who has been made chief of the bureau of manufacturing resources under the board with the right to choose his own assistants.

The Forest Regiments

Two more battalions of the 10th Engineers (Forest) are training at Camp American University. The names of the officers of the Third Battalion have been published heretofore. Following are the names of officers of the Fourth Battalion:

Company D—Capt. R. B. Carter, First Lieutenants W. G. Conklin and Ralph H. Faulkner, Second Lieutenant Fred A. Roemer.

Company E—Capt. Andrew J. Fisk, First Lieutenants Lester W. Jacobs and Henry F. Power, Second Lieutenant Luther D. McDaniel.

Company F—Capt. Stephen C. Phipps, First Lieutenants William G. Howe and John Sommerset, Second Lieutenant Harry H. Miller.

Efforts are being made to obtain commissions for more officers for the second forestry regiment, it is understood.

A chance for early commission in the military service for men who passed the examinations for commissions in the forestry regiments is seen in the reported plan of the government to put 8,000 or 10,000 soldiers trained to the woods into the forests of the Pacific northwest to get out airplane stock needed by the United States and the allies. It is understood that some commissions are being issued on account of this plan, which is regarded as necessary to circumvent the machinations of the I. W. W. and other pro-German agitators who have been blocking the northwestern timber and sawmill industry.

Numerous recruits are coming into the 20th regiment at Camp American University. They come from recruiting stations and army camps and posts all the way from Washington state to New York and from Minnesota to Texas and Louisiana. Some of the new men are being trained at Belvoir, Md.

Efforts are being made by those interested in relief work for the forestry regiments to avoid overlapping of activities of the various organizations concerned, duplication of effort, duplication of gifts to some men, leaving none for others, wasteful expenditures and methods, and competition in buying. The organizations engaged in this kind of work include the American Red Cross, the Women's Committee for Engineer Relief, the Forestry Association, the Department of Agriculture, the Hoo-Hoo relief committee, and the American Forestry Association.

The allied armies need the American lumber and forest regiments and the regiments need the support of the American people, according to W. R. Brown, of the lumber and forest regiments relief committee and a paper manufacturer who conducts lumbering operations on a big scale.

"Our duty to these men and their families is just as vital as our duty to the fighting forces or the Red Cross and the Y. M. C. A.," said Mr. Brown. "The lumber and forest regiments have gone across the ocean for a work in no degree less important than that which takes our soldiers into the trenches. Without lumber for trench building and the other forms of construction essential to modern warfare the allied armies cannot achieve victory. Our foresters, lumbermen and sawmill workers are to supply these needs."

War Profit Tax Law

The application of the new war profit tax law to the lumber industry was the subject of a recent hearing before the War Profits Tax Advisory Committee of the Treasury Department, at which a committee representing various branches of the lumber industry was represented. R. B. Goodman headed the delegation, and represented the Northern Hardwood & Hemlock Manufacturers' Association. W. B. Hewes, of Jeanerette, La., and R. H. Downman were there for the Southern Cypress Manufacturers' Association. The Southern Pine Association was represented by T. M. Barham, P. C. Rickey and D. V. Dierks, Kansas City; H. W. Chandler, Chicago; the West Coast Lumbermen's Association by J. T. Gregory, of Tacoma; R. B. Allen, of Seattle, and W. S. Burnett, of San Francisco; the Northern Pine Manufacturers' Association by C. F. Wiehe, Chicago, and A. W. Clapp, Minneapolis; the Western Pine Manufacturers' Associa-

tion by D. C. Lecky, of Ogden, Utah; the Redwood Association by J. H. Browne, of San Francisco. A paper was read to the committee, which took it under consideration and will probably make certain rulings as to the manner in which the war profits tax shall apply. Questions of the purchase price of standing timber, capital invested, bought good will and built up good will, and the relative status of lumber concerns organized in different manners and under different circumstances are understood to be involved in the problems laid before the advisory committee, which is headed by Representative Hull of Tennessee, author of the income tax law.

Reported Purchase of Airplane Stock

The Italian government will buy 30,000,000 feet of airplane lumber through the office of Director of Lumber Downman as a result of the cancellation of a deal that has been pending for some time which involved New York jobbers and bonded western lumber manufacturers for \$250,000. That deal contemplated supplying 22,000,000 feet of airplane stock to the Italian government at \$120 per 1,000 feet and would have given the jobbers a profit of about \$50 per 1,000, or about \$1,000,000 in all. Under the new plan of buying with the co-operation of this government the Italians will get the material for \$55 per 1,000 at the mill.

The labor situation and I. W. W. operations in connection with the lumber industry was the subject of a conference in Washington recently between leaders of southern and western lumber manufacture. It was reported that the situation in the west is getting better and that a number of I. W. W. agitators are in southern jails. The southern and western lumbermen are reported not to be in agreement on the question of government regulation of the hours of labor in the lumber industry. Several bills have been introduced by western members of congress providing for an eight hour day in mills shipping their products in interstate commerce.

Locust Tree Nails

In cutting locust timber for making treenails for wooden ships, says the Department of Agriculture, it is important to get black locust, and not honey locust. The black locust has a very close grain and is described as one of the most durable hardwoods. The honey locust has a coarser grain and is of inferior quality. The black locust, originally occurring only in the Appalachian mountains and adjacent highlands from Pennsylvania to Georgia, but the department says it has spread over a wide area. The danger of selecting the wrong tree is increased by the fact that in some localities the names applied are exactly reversed, the honey locust being known exclusively as black locust and the true black locust being known as honey locust.

Late Briefs

J. H. Townshend of the Southern Hardwood Traffic Association has been busy in Washington taking up the car situation with government authorities. He has conferred with officials of the Interstate Commerce Commission, railroad's war board, shipping board, and other government branches and with lumber bureau's representatives and others.

Mr. Townshend is reported to have stated that hardwood mills have to close because they can not get cars. Many cars have been withdrawn from the hardwood trade, it is said, to carry piles and timber to Hogg Island, Pa., shipbuilding yard. Not all of these materials are needed immediately, it is claimed. In fact, there is said to be serious congestion of lumber freight near Hogg Island.

Mr. Townshend has told the commission and members of Congress that the safety appliance law should be suspended so that lumber companies' cars, not equipped with certain safety appliances, may be used to carry logs on the trunk lines to the mills which could thus be kept going.

More hardwood lumber is needed for the navy, that department announces. It wants the following lots: Ash, white, firsts, air-dry, 30,000 feet; ash, firsts and seconds, 16,000 feet; oak, white, firsts and seconds, 32,000 feet; oak, white, green, firsts, 15,000 feet; oak, white, for bending purposes, 32,000 feet; poplar, firsts and seconds, 48,000 feet; also some spruce, pine, fir, redwood and cypress.

At the request of Robert H. Downman, director of lumber, the National Hardwood Lumber Association is now organizing what will be known as the War Service Bureau to assist the U. S. Government and its allies in promptly securing their requirements in hardwood lumber. An office will be opened in Washington early in January, which will be in charge of Frank F. Fish, secretary of the association. Every bona fide owner of hardwood lumber in the United States and Canada will be requested to file an inventory with this War Service Bureau showing quantity, kinds, thickness and grades of hardwood lumber owned with location of the stock, which information will be placed on file at the Washington office and be open to all departments of the U. S. Government through the office of R. H. Downman, director of lumber.

All owners of hardwood lumber co-operating in this work will be requested to keep the National association promptly advised of changes in the original list submitted, as it will be vitally necessary to keep its records up to date. The entire expenses of the bureau (for the present at least) will be borne by the National Hardwood Lumber Association without assessments against the owners of hardwood co-operating with the bureau.

The services of the inspection department of the National Hardwood Lumber Association and its force of fifty salaried inspectors have been

tendered to the U. S. Navy, U. S. Signal Corps and U. S. Emergency Fleet Corporation and the offer has been accepted by the purchasing agents and officers of these departments.

Banquets and the War

The demand that banquets be omitted from business meetings is widespread and insistent. It is pointed out that a costly meal, with the accompanying speeches and smoke, contributes little to the success of the meeting, while the expense can be applied to greater advantage along other lines.

There is room for difference of opinion on the subject. Some who identify themselves with the negative side of the question cite the experiences of the churches as argument in favor of the banquet. Clubs and societies which have the financial affairs of the church in charge have discovered that nothing contributes more to the typical ladies' aid society than the dinner that goes with it. Appeals have been made to the members and the other patrons to open their hearts and give the money without the meal and thus make the profit greater; but the appeal falls on deaf ears. If there is to be no dinner, the people stay away.

Business men's banquets are not for the purpose of raising money directly, but for the sake of sociability and to secure as large attendance as possible. Few men would admit that they attend banquets for the sake of the victuals set before them; yet, it is believed that the attendance would decline almost to the vanishing point if the banquet is omitted. The banquet is defended as a business measure, and it is opposed as a piece of poor business and therefore a waste of money, time, and effort. Fortunately, it is not a matter of extreme seriousness, no matter in what light it may be viewed.

Money for Emergencies

The government's demands for very large sums of money to finance the war have revived the fallacy of fiat money to take the place of real money. Large banks are receiving inquiries as to why the government does not print a few billion dollars with which to run the war "to increase the amount of money in circulation," "to save interest," "increase bank deposits," and "make it easier to raise loans." These inquiries are widespread and some of them come from bankers. An excellent explanation of the situation, and answer to the fiat money advocates, was offered in a recent circular from the National City Bank of New York, which says:

It is strange how persistent are these ideas about the efficiency of fiat money, because there never was a trial which did not demonstrate that they are fallacies. Money in itself is an instrument of exchange, a trade facility; it is not final compensation for anything. The government wants money with which to buy war supplies and the people who sell the supplies want money to buy things. The satisfaction of all these wants depends upon production, and that depends upon the labor supply, together with efficient organization and equipment. When the industries are already operating at capacity, the output cannot be increased by increasing the supply of money. Any further gains must come by improvements in organization, equipment or methods, and by shifting labor from non-essentials to essentials. It befogs and confuses the whole subject to talk of relieving such a situation by printing money. More money or purchasing power in any form can only increase the competition for labor and materials, raising costs in terms of money and debt without making any more labor or materials available.

This country has plenty of mere facilities for making payments. Industry is not halting for want of means to make payments; it is limited on all sides by scarcity of men and materials. As a matter of fact we make payments with bank cheques rather than money. The correct method of financing the war is by having the individual citizens accumulate bank credit, and transfer this credit to the government, the latter in turn transferring it in payment of its purchases. The transfers are simple enough, the problem is in getting the individual citizens to understand that they must create by savings the means to supply the government's needs. We must create the purchasing power, and transfer it to the government, abstaining from its use ourselves.

The stock sawer in many a factory can make of himself either the most valuable or the most expensive workman in the place.

Dry Kilns for Government Service

The recent development of the war situation has made it apparent that we are destined to take a substantial part in the fight for freedom. Manufacturing plants are, therefore, shaping their factory output along such lines as to contribute directly to the equipment needed for the war, or to help equip the American farmer, who is to feed the world during the next few years.

Woodworking plants which make wagons, auto trucks, freight cars, airplanes, ships and the like, find an unprecedented demand for their product, entirely beyond their normal capacity. Usually the above have been accustomed to maintain their yard stock of lumber in sufficient quantity to provide normally six months and, preferably, twelve to eighteen months of thorough air drying.

The government's unprecedented demand is rapidly depleting these lumber stocks, and the woodworking plants are faced with the absolute necessity, temporarily at least, of drying all kinds of lumber practically green from the saw.

In case of the soft woods (conifers), this problem has been solved on a commercially economical basis. In so far as green hardwoods are concerned, considerable progress has been made toward satisfactorily drying one-inch lumber and thinner. This is practically true of the so-called "soft" hardwoods, such as poplar, cottonwood, gum,

some kinds of mahogany and the like.

In the case of oak, ash, hickory, etc., in the two, three and four-inch thicknesses, the problem of drying green lumber is decidedly difficult and far from a satisfactory solution.

The Forest Products Laboratory at Madison, Wisconsin, maintained jointly by the United States Government and the University of Wisconsin, has been conducting a series of experiments and demonstrations and has brought out and developed the humidity regulated kiln under patents taken out in the name of H. D. Tiemann, chief physicist, which patents are dedicated to the public.

This kiln has been in use at the Madison Laboratory for several years, and typical installations have been made, or are in process of construction for Moline Plow Company, Moline, Ill.; Interna-

tional Harvester Company, Chicago; Redwood Manufacturers' Company, Pittsburg, Cal.; N. & W. R. R., Roanoke, Va.; Mandt Wagon Works, Stoughton, Wis.; Schoettler Wagon Works, Chicago, etc.

The claims set forth for this kiln are the ability to dry, without substantial loss through degrade, any kind and any thickness of hardwood; those whose installations are far enough progressed report excellent success.

FIG. 2 - ORIGINAL TYPE OF THE TIEMANN KILN

FIG. 1 - GRAND RAPIDS VAPOR KILN

FIG. 3 - COMPOSITE TYPE OF KILN

It is not claimed nor expected, so far as the writer is aware, that this kiln will dry at the normal speed of commercial kilns in every-day use, nor is it reasonable to suppose that it is as simple in operation, or can be operated at the ordinary cost of kiln drying. Green stock requires longer time and more careful kiln manipulation than most plants practice.

As a matter of fact, most users of kilns are accustomed to operate their kilns "by guess and by gosh" and, for that reason, the Tiemann Kiln appears unduly complicated and elaborate. Its provisions for control and operation, however, are very complete and any operator of ordinary intelligence can master their operation in a short time.

There is no question but what at the present time this Tiemann Kiln offers one solution of the drying of thick (2" to 6") green oak and hickory, for wagon, truck and car builders. In spite of this fact, many concerns hesitate to incur the cost of building sufficient special kiln capacity to handle the large quantity of green stock necessary for immediate government deliveries. Few wagon manufacturers, for instance, feel justified in embarking on a policy that commits them to the use either of green lumber, or the use of a type of kiln that is designed primarily for green lumber, and that is proving decidedly slower and more expensive to operate on ordinary stocks than the best of the approved types of kiln on the market today.

It is rarely possible to modify or remodel existing kilns without either unreasonable expense, or destroying the subsequent use of the old kilns by any except the newly incorporated process.

The alternative, therefore, is to select and build a type of kiln that can be operated on the Tiemann Process for green thick lumber during

part or all of the present emergency and that can be operated efficiently and speedily on normal kinds of lumber under usual demands.

This results in a composite type—somewhat more expensive to build than either type individually, but subject to operation under either process, or a combination of processes.

The illustrations show such a composite type, Fig. 3, and also the original types of the Tiemann Kiln, Fig. 2, and the Grand Rapids Vapor Kiln, Fig. 1. There is no reason why the same combination cannot be made with other types of kilns, provided they are of the vapor type with a downward circulation, with adequate damp air accumulation pits and outlets for damp air so situated as to combine readily with the circulation and baffle plates of the Tiemann Process. Large, wide or progressive kilns are not suitable for the combination.

The advantages of this combination type are: 1st: The ability to dry thick green hardwoods. 2nd: The facility with which, by the proper setting of valves and dampers, the kiln may be converted to one of the best of modern types of dry kiln, and 3rd: Complete compliance with government specifications, and co-operation with government inspectors.

The officials of the various war boards and engineers on government work are naturally somewhat influenced in favor of equipment that has been developed under government auspices.

The use of this composite type provides every compliance with government requirements and gives the manufacturer the opportunity of taking advantage, as well, of the best of the practical economies in kiln design and operation as developed by modern factory experience.

T. D. PERRY

❁ Car Shortage in Memphis Territory ❁

A slight increase in the number of flat cars for handling logs to mills at Memphis is reported by officials of the Southern Hardwood Traffic Association following the joint conference of the board of governors of that body and the Southern Logging Association at which it was determined that vigorous action should be taken to secure relief, a full report on which appears elsewhere in this issue of *HARDWOOD RECORD*. There were only two hardwood mills closed down in Memphis December 5, the smallest number for quite a while. None of the mills has enough timber on its yards, however, to last more than a few days, with the result that full receipts each day are imperative if the mills are to continue in steady operation.

No change is reported in flat car situation at outside points in the Memphis territory. This is only another way of saying that the manufacturers of lumber who depend on public carriers for cars for handling their logs to their mills are receiving only a small percentage of their requirements and that they are under the necessity of closing down every few days because of lack of log supplies. Mr. Townshend said, before leaving for Washington, that he did not see any improvement at all in the situation from the standpoint of outside mills.

There is likewise quite a pronounced shortage of cars for handling outbound shipments of southern hardwoods. All manufacturers report that there is an increasing demand for hardwood lumber but that there is also rapidly increasing difficulty in securing cars for handling outbound shipments. Officials of the Southern Hardwood Traffic Association regard fifty per cent as a liberal estimate of the proportion of the requirements of the lumber manufacturers for box cars and other equipment for effecting deliveries being filled. Memphis lumbermen are perhaps faring rather better than this but there are so many outside mills receiving only twenty to twenty-five per cent of their needs that the foregoing is regarded as rather exceeding, than falling short of, actual results.

Weather conditions are still quite favorable and work in the woods is making very satisfactory progress. There are so many million feet of logs ready for transportation to the mills and there is such a shortage of flat cars for the handling of this timber that

much more interest just now centers in securing transportation facilities for handling the logs already on the rights of way of the railroads than in cutting more logs to be delivered to the railroads. However, lumbermen are proceeding on the theory that perhaps the railroads will in time be able to supply plenty of cars and they are therefore not overlooking any opportunity to prepare plenty of timber against their later needs.

Meantime, demand for hardwood lumber is reported quite good. It is broadening somewhat and further progress in this direction is anticipated with the distribution of government orders. Buying is coming just now from private industries and from those that are working with the government in its war program but there is a marked distinction between the manner in which cars are furnished for the former and the latter. Difficulties of transportation for those seeking and accepting orders from private industries are multiplying every day while the question of transportation, where government orders are involved, is a very simple matter.

With all the feverish building of ships, there should be a pretty lively demand for live oak, which is a traditional wood in ship building.

The scarcity of help this year makes a more urgent need for the adoption of all the practical labor-saving devices available. Sawmill men and woodworkers everywhere should look over the labor-saving machinery offerings to see what will fit in with their needs and help the cause along.

One advantage of the sawed tie over the hewed tie is in the chance to utilize the trimmings. Not only is there a good sale for the siding boards from ties, but there is another chance for utilization in dimension stock that merits attention.

A good saw blade with poor teeth is like a good hoe handle with a bum hoe on the end of it, in that neither is of much use in that condition.

Hitting the Sawdust Trail

The organization at Alexandria, La., on November 17 of the Southwestern Hardwood Manufacturers' Club was a step in the direction of gaining the information that comes out when local manufacturers get together and not only discuss their selling problems, but get a clearer idea of what each one is doing in manufacturing hardwoods in the same section. For years the conferences of the Michigan manufacturers have been very beneficial and other local organizations have assisted materially. Now, then, this southwestern association will not only properly affiliate in the open price conferences, but will have an organization to work out other plans necessary for its prosperity.

The getting together of twenty manufacturers as members of this new association in a section where manufacturers are scattered as they are in those two states is a mighty good omen of the need of the organization and of its future success.

Albert Deutsch, who is president of the Sabine Logging & Lumber Company, San Antonio, Tex., and Oakdale, La., and S. O. Davis of the Sabine Tram Company, Beaumont, Tex., are both progressive factors and must of necessity present a formidable pair of officers if you are not a member and live in that section.

B. B. Burns of the C. L. Ritter Lumber Company, Huntington, W. Va., president of the Hardwood Manufacturers' Association of the United States, and Treasurer M. W. Stark of the American Column & Lumber Company, St. Albans, W. Va., a leading apostle in the open price plan, and Frank Gadd, assistant to the president of the Hardwood Manufacturers' Association, assisted in the formation of this organization by suggestion and co-operation, as well as explaining in detail the efforts made by the manufacturers' association to get sectional organizations within its fold, and which Secretary Gadd visits each month and compiles the results and experiences of the past month, the sales, stock reports and other data that make the intelligent marketing of hardwood products more intelligently done because the facts are before the men co-operating.

These men also attended an open face watch meeting at Memphis, where a good, big delegation and reports indicated that interest had been lacking in some sections, at least, in the past. There are men in every craft who are backward about telling their competitors about what they are doing for fear that the other fellow will learn something. There never was so much team work in Memphis as there is today, and their influence and that of the membership in the Mississippi valley in this open price proposition is bringing out an interest that foretells more intelligent valuations on hardwoods than ever have existed before.

Along this line of talk, while riding in from an interesting golf game with W. A. Ransom the other day, he harked back to a discussion we have been holding for several years now about how much it costs to cut, skid, load and haul logs, and what the cost of the haul-up end of the mill is, and how much money had gone into the material at the tail end of the mill. I notice in visiting the boys in this section that they all have the matter in their minds because there are so many angles of cost that you hadn't counted on in the old days that it is a matter of necessity rather than wish, perhaps. But, as Col. "Wick" says:

"There is no use fooling about the matter. You have got to get next to it and fight it. I was impressed and edified recently by one of my friends in Louisville who showed me how an auditor had dropped into his office and eliminated leaks that amounted to considerable sums that hadn't been going into the cost except as a liability. It is my impression that all of us should keep up-to-date along this line. It is more important now than it has ever been."

When "Wick" gets serious he always brings out something, and reminded me of the first yarn he had ever told me of the shipment of cold storage chickens to West Virginia, and said that "if the new members of the Southern Hardwood Emergency Bureau would take a few weeks off and make some of these speeches on chickens

and would be sure to get all of the dope it would surely wake us up from our lethargy on the subject of cost."

Ransom just returned from Washington and New York, and, while he enjoyed the big city, he said he simply had to leave town, and the president informed him and other good citizens of America that they had to turn the lights out. He got so used to those electric light signs in Memphis he got homesick if he didn't see them in New York.

Incidentally I am reminded of his brother, Charlie, who has been working very seriously and very hard while W. A. was east. His work was well attended to. He reported that logging crews were somewhat depleted, but they are getting out their logs just the same. They had shut down their mill at Blaine because in that cotton section every stray negro was out with his whole family picking cotton, and because flat cars didn't come in in sufficient numbers to keep both mills running, so they concluded to run the more important one at Memphis and shut down the other.

One of the men who visited with the members of the hardwood trade in Memphis was N. H. Walcott, president of the Crittenden Lumber Company, Providence, R. I., and Crittenden, Ark., had been spending some time at the mill. He entertained us the other night at Memphis with yarns about some of the eastern boys of the olden times—men who have gone before us and are now home—and some are still at the rudder of some of the successful concerns in the East. His eastern concern is known as the L. H. Gage Lumber Company, but in going through Indiana and back to Yankeedom, and then to Arkansas, he still has a keen interest in all branches of the hardwood trade because that is his business. His comment about embargoes was something worth while listening to. While like every other good American he is in sympathy with the government's needs and is only too glad to help in co-operation with it, he thinks the railroads' handling of the car situation in the past few years has added a burden to every business man, and this word "embargo," which was unknown up to a recent period, is a misnomer in several ways. It might be called a "stopper," for it practically puts the industry out of business if a man needs lumber in Massachusetts and the lumber is in the yards at Cincinnati.

Embargo

The big embargo menace in Cincinnati is still "embargoed." I notice George Cox of Ohio recently appointed our old friend Major Stubbs, who for many years was with the Southern Pacific lines and is now retired, to investigate the cause and remedy. We believe the major will assist the situation and his long experience should be beneficial, but in the long run this embargo proposition is going to be like a stepchild—never with us—until the whole business machinery in embargoes is dumped into a tumbler and the wind and water all shaken out of it. We must accept scarcity of flats, scarcity of box cars, scarcity of any kind of a darn, old car, embargo and all the rest, during the next six months. If that doesn't raise the price of lumber five dollars a thousand and put many a consumer in the ninth hole, I will be surprised.

Specifications

There is more or less comment on specifications for government business than we have mentioned heretofore, and a letter before me this morning reminds me that there are others feeling the wave caused by the president's and Uncle Sam's cabinet. Our friend who always could express himself says, in referring to specifications from Washington, that "they make them or adopt them to the book No. 79 of the issue of 1813, and they would make God sit up and take notice of his shortcomings to be able to make trees grow that will make such lumber."

I can hear some fellow bob up now and say: "This lumber trade is pro-German and it is not backing up the president." For their benefit let me remind him that the quotation given above is from a rock-ribbed Democrat with a thirty-third degree and sixty-four years old in the cause, and the reddest-blooded American citi-

of the business life, and a thorough supporter of the policy of the Kaiser," and all those who are against the present commercial policy of the United States.

And that reminds me. There have been some heads of departments and special officers at Washington, who have written a lot of fool letters along that same line. If a man wanted \$105 for oak on a special grade to fit some particular bill, some secretary at Washington would write him that he wasn't patriotic, and it was his duty to sell lumber to the government for less than it cost in order to show his patriotism. To relieve the mind of some of you fellows who think everybody is a hypocrite but himself, I have two thoughts in mind. I have seen letters of that kind written by prominent men in Washington, supposed to be holding up the hand of the President.

I also learned of a new experience in one of the departments in Washington. It seemed that they needed munitions. They got a man they thought was best equipped to buy the materials and get them. He said he wouldn't take the job unless he could eliminate the red tape and either buy what he needed or take it up with another fellow that day and not wait for three weeks to have it go around to the various departments, and when he received an invoice for a car that was according to specifications, it would be paid for promptly. He acted in good faith and he was given the power to do things, and he did them. The first thing was to employ a system of modernizing the records and methods of the office he went into, and he did it so thoroughly that there is a clean desk in that office every night. And the fellows who sell him, sell Uncle Sam through this \$50,000 man, who is giving his services for nothing, and is only too glad to do it, and would be working twenty hours a day if he hadn't systematized his office. He has the good will of everyone of the fellows that take contracts from him, because it is a business proposition, and he even has his job down so fine that if they weren't up-to-date he taught them how to be up-to-date and gave them the name of a superintendent who would be sure to deliver the munitions quickly.

To show you the folly of the government specifications—I learned of a recent purchase by Uncle Sam of thick red birch, to be practically one face red, 14 feet and 16 feet. Now, you know what thick red birch costs. Very little of it cuts over four, six or eight-four. This was to be used for ladder stock for ladders going over the side of the boat to let off passengers where there wasn't a dock, or for sailors to go overboard into the dinghy, or whatever they call those row boats. Why, most any four or five-inch hardwood strip could be used to good advantage. The ship carpenter who invented that ship specification years ago was all right, although he wasn't very well acquainted with how true the trees grow, and the further fact that the Lord only makes one almost clear log in 10,000.

It isn't in the spirit of criticism that we talk about these things, but they show that the men we have down there on the new committee (and these are all practical men) have further access to the councils of the bureaus that have been formed, and more of them will be sent to Washington, and, while down there they know more about the possibilities of the various trees and how they grow and what they could be cut into, it would be a good thing if specifications would be amended so that they would be practical. And still at the same time they would meet the conditions of the ship carpenter and lumberman who has the tree.

Open Price Meeting

The November conference on the open price plan at Cincinnati, Tuesday, November 20, was a bully meeting and at each session there seemed to be more enthusiasm about the data that comes from the individual.

West Virginia, Virginia, Tennessee and Kentucky were all represented. Ohio, too. One of the subjects up for discussion at this meeting as well as other sessions in the last week in the South, has been a strange coincidence that all the log rules that have been built in the past years do not provide for the half inch which the present rules provide for, and the orders will be made in future rules to meet that condition.

Ed. Robinson of the Mowbray & Robinson Company in speaking on the subject said that an error in measurement both over and under where there was a shortage of several hundred feet came out in a big ear from the fact that the inspector's eye is not always true or his method of not endeavoring to get the exact amount in the ear brings about a thoughtlessness that means misunderstandings and besides a loss of 300 or 400 feet and \$80 or \$150 in a car. He said it is not a good thing to have occur because the carelessness in accounts is just as unfortunate as in cullage. He stated further: "I would think that every man can afford to check this up as a natural leak as any other that he may have, because we are very careless of our methods. I heard from some men that they are absolutely perfect, but the majority of people in handling lumber do not feel as good in the morning as they do in the afternoon, or vice versa. So the grade or quantity might vary because of this, and it is well to take it up in time."

Ralph McCracken now lives in Lexington, Ky., being sales manager of the Kentucky Lumber Company there. He has lived in Kentucky a long time, but at present is in a bad fix. He has one neighbor who likes his mint toddy pretty well, but he hasn't a mint bed. He has another neighbor who has a large and luscious mint bed which seems to be at the disposition of his left-hand brother. So Ralph has a hard time with his garden in the summer because of his friend's paths across the back yard. Fortunately it is a sociable neighborhood because the three live in unity together. The middle man caring little for Kentucky brew or mint, while his neighbors are both interested in the mint particularly, and he of course has to be neighborly and furnish the liquor occasionally as well as the path. Speaking of the lumber business, Mr. McCracken said that "we have about all we can take care of this year. Stocks are pretty well broken," and President Delaney thirty or sixty days ago stated that he didn't care if he got another order this year or not. He would just as soon add it to the lumber pile. The sales manager is still in close touch with the situation and gets the orders as usual.

Benefits from Co-operation

The announcement that the American Oak Manufacturers' Association and the Gum Lumber Manufacturers' Association would be consolidated at the annual meeting of the two associations January 17, was no surprise to the operators of this section, but it means a step to bring about one association covering the manufacture of hardwoods in the Southland. The probabilities are that the sooner all the boys get together under one roof, the greater the possibilities for future work, adding greater efficiency to the present efforts in exchanging information concerning the manufacture, sale and consumption of hardwood lumber.

A manufacturer speaking of the benefits derived from the Memphis Lumbermen's club stated that there probably wasn't a member who could not credit to the work of this association at least \$10,000 a year because the men in this local field all have shown the spirit of co-operation better than ever in their history. The telephone is used to better advantage and the exchange of information is more frank, thus eliminating the jockeying that has prevailed in some parts of the industry by the lack of frankness, exchange of costs, values, stock figures, etc. The probabilities are that this step will lead to less animosity and more intelligent co-operation between all branches of the hardwood industry. Members of the various clubs were enthusiastic about the future efforts to add another leaf to their history.

I met W. H. Dick of the Tallahatchie Lumber Company, Phillip, Miss., the other day. He is both lumberman and farmer—and some farmer, by the way. He came to Memphis to sell 50,000 or 60,000 bushels of corn raised in the Mississippi bottoms. The price is about \$1.65. He said, "You know Mississippi is a very productive state and the more we grow into knowing its possibilities, the more our ground will be cultivated, and the first thing you know the agricultural production of the state will bloom out to an Illinois or an Iowa."

Veneer and Panel Manufacturers Meet

Enthusiastic Gathering That Laid Stress on Organization and Co-operation

THE ANNUAL MEETING of the National Veneer and Panel Manufacturers' Association at the Auditorium hotel, Chicago, December 11, sounded the keynote of better organization and more complete co-operation in order to meet the crisis brought on the country by the war. It was a war meeting. Other matters came up for consideration and other ideas found expression, but the major note that ran through the whole proceedings was war and what the veneer and panel people can do to help win it. The day's discussion culminated in the appointment of a war committee on which will devolve the duty of pointing out what the association can do in the factories to help the soldiers in the field, the sailors on the seas, and the aviators in the air. This committee was appointed with the idea that it should be representative not only of the veneer manufacturers and the maker of panels, but that it should represent regions also. The names on the war committee follow: B. W. Lord, chairman; A. E. Gorham, M. W. Perry, E. R. Morrison, D. E. Kline and R. L. Jurden.

The committee is not drawn wholly from the veneer and panel association, because it is the plan that the work of organizing for the war shall not be confined to the veneer people in this association, but shall extend to the whole industry. It was the idea of those who discussed the appointment of the war committee that the members ought to give their whole time and energy from the present time until the end of the war, and should serve without pay.

This does not mean that the work will involve no outlay of money, for there must be headquarters and a working force and adequate equipment and these will involve considerable outlay in money. The location of

headquarters was discussed, but has not yet been decided. The impression prevailed that Washington was not the most advantageous place for headquarters, because that city is so congested with war business that office room and facilities are difficult to obtain. It was thought that some central location, with regard to the veneer-producing territory would be better.

THE WAR COMMITTEE'S DUTIES

The work which the war committee will do has not been fully laid out. In fact, the committee itself is expected to arrange most of the details of its own activities; but the general work will consist in co-operating with the government in all possible ways in putting veneers and panels into service wherever they are needed. The plan, as outlined, does not consist so much in going after orders as in ascertaining how the veneer industry can help carry on the war and then organize to do that service; and that organization will include a mobilization of the resources and energies of all the men, machines, and other resources that the government may need. Through the whole proceeding, and in all the speeches there was the clear ring of patriotism above all consideration of pecuniary profits. Not a discordant note was sounded, but it was a meeting where harmony and singleness of purpose was pre-eminent all the time.

ROUTINE MATTERS

Most through trains entering Chicago on Tuesday were from two to six hours late on account of the cold and other unusual winter conditions, so that the meeting that was scheduled to begin at 9:30 a. m., did not get down to business until afternoon, because of the absence of officers and members. Routine preliminaries were

A. E. GORHAM, NEW PRESIDENT AND MEMBER WAR SERVICE COMMITTEE

B. W. LORD, CHAIRMAN WAR SERVICE COMMITTEE

D. E. KLINE, LOUISVILLE, KY., MEMBER WAR SERVICE COMMITTEE

hurried through in order to clear the deck for more essential work.

President F. A. Marshall, of Rhinelander, Wis., called the meeting to order; the roll was called by Secretary Howard S. Young, of Indianapolis, Ind. The reading of the minutes of the last meeting was dispensed with. Working committees, as follows, were appointed:

NOMINATIONS: C. H. Barnaby, E. W. Benjamin and H. E. Kline;

MEMBERSHIP: M. C. Dow, H. B. Sale and J. D. Maris;

AUDITING: W. P. Groffman, H. J. Barnard and Bruce Clark.

Treasurer E. H. Deffebaugh read the report of finances which showed a fair balance in hand after meeting the association's expenses up to date.

The buffet lunch was served by the hotel management in the meeting room, to save time.

THE GOVERNMENT'S PANEL TEST

Two government engineers, Mr. Teesdale and Mr. Hicks, from the Forest Products Laboratory at Madison, Wis., discussed the methods and purposes of the government in testing panels for war work. The tests being carried on include both glues and veneers. The glues are tried out to ascertain their water-resisting qualities, and some of the tests are quite severe, including submersion in water during various periods from a few minutes up to several days; exposure to atmospheric conditions as severe as the panels are apt to meet in actual service in airplanes, and in temperatures that cover all changes of climate. The glues so tested are in panel work, and failures are manifested in the falling apart or loosening of the veneer sheets or plies composing the panels.

The question whether the government had found absolutely waterproof glues, or whether it was trying to make such glue was not answered by the engineers who explained that there were a number of matters which they were not at liberty to discuss, and that was one of them. It was stated, however, that satisfactory glues can be had.

The tests of the veneer sheets composing the panels which go into the wings and other parts of airplanes are carried out in several ways, and for the purpose of determining a number of factors. There is a bending strength test, both with and across the grain of single sheets, two-ply, three and more ply; and similar tests of panels with crossbanding; tests for splitting, for warping, density and shearing, and tests of riveting. These matters, which are more or less technical in character, were described in detail.

MATTER OF PUBLICATION

Questions from several members sought to elicit the information whether the government intended to publish the results of its experimental work with veneers and panels, and while the replies of Messrs. Teesdale and Hicks were not positive, they were inclined to doubt whether the data would be made public, but they understood that it was for the benefit of the Signal Corps, which is a body concerned in war appliances and materials. A number of members expressed disappointment that the government should collect data so vital to veneer manufacturers and then withhold it from them. Further discussion, however, showed that the data was not yet in shape to be of benefit to panel makers, but that it would not be kept out of reach, once it is in shape to be given to those interested. It is not proper to make public experiments which are not yet complete.

The subject of airplane material came up for general discussion, not only by the engineers from the government laboratory, but by a number of manufacturers who have lately been in Washington or in communication with government officials. A good deal of information was given regarding veneer in airplanes. The work along that line is enormous. Figures showing the veneer required for airplanes are astonishing. Some members, who were recently in Washington, said that it is stated there that contracts have been let for 22,000, and probably 75,000

WALNUT

for

High Grade Furniture

In producing our choice Walnut Lumber and Veneers for High-Class Furniture we use the old-fashioned soft Ohio and Indiana Walnut. Thirty-six years in the lumber business and twenty-five years of experience with steaming and seasoning processes have taught us how to manufacture to get the best results.

We have a special department supplying clear ribbon figured table tops, talking machine dimension stock, etc.

Prices and other particulars on request.

Geo. W. Hartzell
PIQUA, OHIO

Why This Trade-Mark Was Selected

EARLY in 1911, foreseeing the great possibilities of Figured Red Gum,—we had been supplying veneers and panels in this wood in moderate quantities previously—we inaugurated our extensive advertising campaign, endeavoring to enlighten the cabinet trade of the thorough adaptability of Figured Red Gum, its easy working and finishing qualities, etc.

We then began the manufacture of Figured Red Gum veneers on a greatly increased scale, cutting only the very choicest figured logs into veneers, knowing that we had a reputation to make for Louisville Figured Red Gum.

It is generally conceded that a trade mark—that important asset by which many manufacturers are best known—should be indicative of the nature of one's particular business, and "Figured Red Gum" (in circular symbol) was selected, as we had become and still are nationally known as the Figured Red Gum specialists and leading producers.

We shall be pleased to serve you.

more will be contracted for, and that each calls for 500 feet of veneer panels; but these figures are not official.

EFFICIENCY OF AMERICAN PANELS

The question came up whether panels made in this country and shipped across seas stand the weather conditions and meet requirements on the other side. A number of manufacturers, who were present, have shipped panels to foreign countries, some as far away as South Africa, and since not one of those shipments brought complaints, it was assumed that the panels met requirements. Some of these panels were made with animal glue and others with vegetable. Panels made in Europe and shipped to this country have not always stood up. Sometimes they have gone to pieces. It was the conclusion from this experience that American glue is as good as the foreign article.

Figures were given by Mr. Hicks to show the relative strength of several woods commonly used in this country for veneers; but these strength figures related to wood in the solid form and not to veneer; and there was no information as to whether the same figures would hold when the wood is reduced to thin sheets, for that point has not yet been determined by adequate tests.

It was pointed out by members who took part in the discussion that the enormous expansion of the uses of veneers for war purposes, especially in airplane construction, must have great effect upon the uses of this product after the war. New uses are found every day in the manufacture of war material, and when peace comes, the knowledge acquired in war can be put to use in many ways. Nothing but war could have so quickly expanded the employment of panels and other forms of veneers, and manufacturers will not be taking advantage of their opportunities if they do not make use of this expansion after the war demand ceases.

DISCUSSION OF UNIFORM COSTS

An address on uniform costs was given by W. P. Flint, secretary of the Millwork Cost Information Bureau, Chicago. He explained how the door and sash manufacturers had solved the problem of arriving at fairly uniform cost of production in factories of various sizes and working under different conditions. It was accomplished by employing accountants and experts to work out a system based on actual costs in many plants; but the scheme went further. The figures arrived at by the accountants were tested and compared with later figures from similar factories, and in course of time reliable results were obtained, and were found of great value in planning business and submitting bids. The association, represented by Mr. Flint, has 235 members, and is not yet three years old.

MANUFACTURERS FACING WAR PROBLEMS

It was decidedly a war meeting and the address by E. B. Saunders, of Boston, representing the Simonds Manufacturing Company, took as his subject, "How Manufacturers Are Facing War Problems." He stated it as his opinion that before the war ends, unless the end is nearer than most people believe, the manufacturers of

the United States will be as highly organized as are those of England at this time. There they have mobilized and are using all people and materials that can be employed for war purposes. The efficiency of their factories surpasses anything known in that remarkable country before the war. No idlers are to be found, no unproductive resource. The army at the front is backed by larger armies at home, in the fields, and workshops.

We must do the same in the United States. No man should suppose that this war can be won by the men in uniform alone. They cannot long meet the strain put upon them unless they are backed by every class and condition of people at home. It is a war of men, materials, and standardization, and the greatest of these is standardization.

We will have to meet the weeding-out process when it comes to separating the essential from the non-essential industries; and the industry which shall be judged non-essential must disappear in order that what is necessary may go ahead. The manufacturers who are abreast of the times and alive to the problems confronting us, must discover for themselves what they can do to help win victory. They must not wait for some one to find work for them. They must find it for themselves and they must let it be known what it is that they are prepared to do.

Mr. Saunders declared that thus far in the war the sacrifice in America has not been met by the ranks of laborers, but by manufacturers. They are the ones who are organizing for service and the money to finance the war is coming from them.

The appearance of women in the labor field, as competitors of men, has begun. It is claimed that in this competition three women can do the work of two men. Manufacturers must solve the labor problem within their own plants. They must protect and care for their laborers. In England, early in the war, workmen were on duty in some factories one hundred hours a week; but that was found to be a mistake, and the hours are now cut to a little more than half of that maximum, and better work is the result.

WAR PREPARATION

B. W. Lord's address was a war talk from beginning to end. The end which he held steadily in view was the winning of the war, and all his argument was devoted to that topic. He had recently spent a few days in Washington where he had a near view of war preparations. He had talked with leaders there, and came away impressed with the stupendous undertaking on which we are embarked. It will call for every ounce of our strength, and all of our energy and ability.

Mr. Lord made up his mind from what he saw and heard in Washington that the demand for veneers for war uses will far surpass any present expectations. He named a number of articles which he believed would call for large amounts of veneers, among such articles being airplanes, hydroairplanes, electric batteries, and shell and ammunition boxes. He found that prospective purchasers of veneers at Washington were not well posted

concerning the manufacturers and supplies of veneers, but were anxious to get in touch with producers of this article.

Mr. Lord discussed at considerable length the duties of the war committee to be appointed to look after veneer sales for the association. He warned against the scalper who will get contracts and then go among veneer manufacturers to buy the stock with which to fill his orders. The committee should get in contact with the mills.

F. F. Fish, secretary of the National Hardwood Lumber Association, had just returned from Washington, where he has opened headquarters for his association, and he gave an entertaining account of conditions there, from the lumberman's viewpoint. In common with all the other speakers he emphasized the necessity of better organization in order to deal with war problems.

EFFICIENT CO-OPERATION

Kenneth P. Gregg, St. Louis, Mo., spoke as an expert on the fundamentals of efficient co-operation. He based his argument on the assertion that unless efficient co-operation between all members and all divisions of an association is maintained, the association cannot be wholly successful at this time when the watchword is organization and co-operation everywhere. It is up to the veneer and panel manufacturers to show the government what they are able and willing to do in the fight now going on.

R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, was recently in Washington on business for his association, and he brought the same class of message which others have brought from the National capital—organization and still more organization. It must be brought about or there will be no success. The government has bought a billion feet of lumber for war purposes, and all has been bought from organizations, none from individuals. Formerly, the government looked with distrust and suspicion upon associations and organizations, but that day is past. The organization is now welcomed because it is needed.

Mr. Kellogg was followed by an earnest talk from Mr. Lord, who gave further ideas bearing on the absolute necessity for perfecting an iron-clad organization. He laid stress on the character of the war service committee, made up as it is, of members and non-members representative of the two industries all over the country.

The association then went on record with an undivided vote as agreeing to provide the committee with necessary money to carry on the work it was organized to do, the assessment to be made on a basis of class, according to the value of production, the maximum assessment per month being \$25 and the minimum \$5.

E. E. Hemingway then submitted the report for the committee on reorganization. The report was received and filed and the committee discharged.

H. E. Kline, reporting for the special grading rules committee, submitted suggestions for grading rules on veneer in the different woods. The suggested rules were adopted as the official rules of the association. A copy

of these will appear in the next issue of Hardwood Record.

The nominating committee then reported with recommendations for the election of the following officers:

PRESIDENT—A. E. Gorham, Goshen, Ind.

FIRST VICE-PRESIDENT—J. D. Maris, Indianapolis, Ind.

SECOND VICE-PRESIDENT—J. T. Horne, Tuscaloosa, Ala.

THIRD VICE-PRESIDENT—N. M. Willson, Jamestown, N. Y.

TREASURER—E. H. Deffebaugh, Chicago.

SECRETARY—Howard S. Young, Indianapolis, Ind.

B. W. Lord was re-elected as delegate to the Chamber of Commerce of the United States.

The meeting then adjourned.

Strength of Panels Compared with Lumber

A panel made of sheets of veneer with the grains of the different layers crossing at right angles is considerably stronger than a board of the same thickness all in one piece. That is because wood splits more readily than it breaks. In a board, the grain all runs one way, and by splitting along that grain the board parts and becomes two pieces; but that cannot happen with a panel made up of sheets with the lines of cleavage at right angles. If one sheet splits, that next to it must break across the grain. Not only is such a panel more difficult to split than is a board of equal thickness, but it offers greater resistance to tendency to warp. The sheets with grain at right angles counteract each other's warping stresses, and the panel remains true.

Red Gum's Value for Veneer Cutting

More veneer is cut from red gum than from any other three or four woods in America, and most of it is cut by the rotary process. Two or three reasons may be assigned for the high place held by red gum. It is abundant, and its inherent qualities give it value; but there is another reason why the rotary veneer cutter holds it in esteem. The symmetrical form of the trunk makes it an economical wood to work on the rotary lathe. Little need be cut away and wasted in making the logs round, they being naturally round. Perfect sheets are produced almost from the first turn. That is an important matter in the course of a season's run, for the heaps of waste and of imperfect sheets are reduced to a minimum.

That would not be the case if red gum bales were lopsided and ribbed, as some of the cedars, birches and maples are. It might be necessary to cut away nearly half a log before a perfect sheet of rotary veneer could be obtained. There are other woods as symmetrical in form as red gum. Among such are yellow poplar and tupelo gum. The cutting of rotary veneer is more exacting than is the ordinary sawing of lumber; for a log may be repeatedly turned, if of irregular form, in order to get the best lumber, but

the veneer sheet must go round and round from the beginning to the end of the operation, and it is important that the log be of regular form if it is to yield a high percentage of merchantable veneer.

Veneer Notes

At Conway, S. C., the Veneer Manufacturing Company has been incorporated to manufacture panels and box shooks.

The Mississippi Veneer Company has been incorporated at Lexington, Ky., with a capital stock of \$50,000.

An involuntary petition in bankruptcy has been filed by the Kansas City Column & Panel Company, Kansas City, Mo.

The Breece Handle Manufacturing Company of Portsmouth, O., which operated a handle factory at Kenova, W. Va., has been reorganized at the latter place and will be known as the Breece Veneer Company. The company is incorporated at \$100,000, the officers being: J. T. Breece of Portsmouth, president; C. O. Breece, Portsmouth, vice-president, and H. T. Breece of Kenova, secretary and treasurer. In addition to these, the incorporators are: M. H. Shumway, J. M. Gharam and W. B. Anderson of Portsmouth.

The Kenova handle factory will be used by the new concern, in which high-grade veneers will be manufactured.

More veneer is made from red gum than from any other two woods, and Arkansas leads all other states in gum veneer, though twenty states contribute to the supply.

The quantity of white oak manufactured into veneer is four-fold greater than red oak. The largest production of white oak veneer is credited to Ohio, with Tennessee second. Wisconsin leads in red oak veneer.

Ten or more imported woods are listed as veneer material in this country, but more is made from mahogany than from all other foreign woods combined. Spanish cedar stands second. Practically the whole of the Spanish cedar veneer is worked into cigar boxes. The veneers of ebony, rosewood, satinwood and Circassian walnut do not aggregate one-half as much as is cut from Spanish cedar alone.

The stock sawer in many a factory can make of himself either the most valuable or the most expensive workman in the place.

Grinding planer knives so hard that the edge is blued from the heat is a splendid way to get them back at an early date. Don't do it. It is a detriment to the steel, and when the edge crumbles, as it surely will, the smoothness of the stock will crumble with it.

The fact that the enterprising mill manager is never thoroughly satisfied with the best skilled employe, is a spur to greater effort and progress, and to that extent may be regarded as useful, yet it may get hard on the nerves and, occasionally, the tired workman may feel that he has a full measure of appreciation and could enjoy resting on his laurels for a minute.

Inspecting stock as it goes from the mill has a great deal to do with the reputation of a mill. A good inspector is a rarebit. The man taking stuff from a machine should turn every board over to see if both sides are perfectly cut and both ends of matched stuff cut clean and straight. A tight guideblock makes a nick on the first end and a loose one on the last end, and a loose pressurebar on the lower knife makes rough work, variable thicknesses, and a nick the whole width of the board when going out. A loose top bar makes wavy and uneven thicknesses of anything. The immediate report of the inspector should correct these faults.

The Lumberman's Round Table

Figured Gum in Window Panels

One of the most effective ways in which to use figured gum is in the construction of panels for show windows. The modern merchant knows that his windows are his best salesmen, and he dresses them up accordingly. Usually it is desired to have a handsome figured wood to form a suitable background for good-looking merchandise, and figured gum certainly serves a purpose here.

One of the leading shoe stores in Chicago has windows which are trimmed in figured gum, and finished in oil, without varnish or stain. The result is that the natural color of the wood is brought out, and the appearance is elegant and appealing. Circassian walnut in its palmy days never had anything prettier to offer than this particular installation of gum.

Fixing the Responsibility

A lumberman who recently broke down under the strain of handling too many details has decided that the best plan for him to pursue hereafter is to find one man big enough to handle an entire operation, and put it up to him to do so, taking the responsibility for the success of the work.

This manufacturer, who has had to deal with the general management of the enterprise, including office work, financing and sales, also attempted to watch all of the various departments connected with the mill; and the result, as stated, was that he broke down under the burden. A real superintendent, who could have assumed the entire task of running the mill, would have relieved him of all of this, and at the same time probably would have got better results than, in reason, could be secured by a man who has his mind crowded with dozens of other matters.

For example, it is hard for the head of the business to watch such details as log buying, inspection, the daily cut, the placing of cars, and all the other details which fall to the lot of the superintendent. Even though he has a department head who is immediately in charge of certain matters, he himself must think about them and supervise them to a considerable extent; and that is extremely difficult. The other plan is not only easier, but better, and gives each man a chance to do his best work, without having to worry with details which could be handled more effectively by someone else—the man on the job.

The lumberman referred to has had to pay a high price for his experience, but he realizes now that the lesson was worth learning. A proper organization involves the idea of distributing responsibility, and then making those to whom it is delegated respond to it.

Making Use of Motor Trucks

Lumber concerns which are using motor trucks are rapidly learning, in common with those in other lines, that there is more to getting value out of motors than is represented in the latter's ability to cover the ground rapidly. That is, the lumber must be handled efficiently, and the idle time of the truck held to a minimum if the investment is to prove profitable. That is because the truck represents more capital than horses and wagons, and the lumberman cannot afford to have this large amount of capital stand idle, as it must do when loaded in the ordinary way.

For this reason many lumbermen who are using trucks have equipped them with rollers, by means of which the lumber is rolled forward from stands or wagons on which it has previously been stacked. This enables the loading operation to go on while the truck is out of the yard, so that when it returns, the load is ready for it and can be rolled right onto the body without delay. The rolls are geared to each other, the gearing being arranged in such ratios as to enable the rolls, cranked by hand, to be turned easily by one man. Usually a man gets at the crank on the truck and another at that on the yard-wagon or stand, and the big pile, which may weigh five or six tons, is transferred without delay.

If the lumber is to be delivered onto the ground, it can be rolled off in the same way, a chain, fixed with one of the patented clamps which have come into use, holding it together. Or, in the case of wide lum-

ber, especially rough stock, sticking it at alternate ends every few courses holds it together and enables it to be dumped without chains.

A good many hardwood yards are developing local or city business of sufficient proportions to justify them in using trucks, and they are studying this question and experimenting in various ways. For instance, one yard in the Ohio valley has recently been using a truck made of a Cadillac pleasure car chassis. If it gives good results, a commercial car will undoubtedly be installed. But the right handling methods should be worked out when the truck is bought if it is to be worth while.

Too Easy to Get Credit?

The remark is often made that one of the reasons why overhead expenses are greater in the lumber business than they ought to be is that it is too easy for those who do not deserve credit to get it.

This is another way of saying that the lumberman who books an order without scrutinizing the credit hazard involved is introducing an element of speculation into his business.

Cases are frequently noted where a lumberman, knowing that the buyer is not a good credit risk, will nevertheless ship the lumber, if the price at which the order has been booked is attractive; and on the other hand, if the item sold happens to be a slow mover, the order appears so alluring that the credit end of the transaction is almost lost sight of.

Of course, when business is good, as it has been of late, the lumberman is in a position to choose his customers with more circumspection, and those who have a reputation for discounting their bills naturally get most consideration. But ordinarily the hardwood concern is compelled to do a lot more worrying about its accounts, and to accept a much higher proportion of paper, than is the rule in many other businesses.

In contrast to this, it should be noted that the hardwood manufacturer pays cash for most of the things which he buys. His timber is paid for as soon as it is delivered at the railroad station, and before the logs are received at the mill. Those who are jobbing lumber usually pay for it when it is taken up at the mill, and sometimes as soon as sawed and put in the pile for their handling. Freight don't permit much extension of credit, and labor is an item that demands cash every Saturday night. The only place where the lumberman has a chance to do business with the other fellow's money—which is what use of credit really means—is in connection with minor accounts for supplies, which are a small fraction of the total cost of operation.

Consequently, it looks as if the lumberman who is an "E. Z. Mark," when it comes to extending credit ought to apply the same methods to customers as he must adopt when buying himself, and endeavor to make the account one that will be liquidated promptly. You can't figure profits ahead of collections.

The Portable Units

The portable sawmills of the country, while individually small and insignificant, in the aggregate constitute quite an item in hardwood production, and there is every indication that this winter will be unusually busy among them. The demand and the good prices for many items will serve to stimulate activity among portable mills. A large part of their product is for local consumption which has the effect of reducing the demand for the lumber of the open market. They are beginning to look somewhat beyond this, however, and to become factors in supplying dimension stock and especially items for wagon, vehicle and implement work. Some of them have excellent timber available and while the quantity may be limited, the quality is there and those needing the product of this timber may well get in touch with the portable units to the end that most of it may be conserved for the best uses.

James E. Stark & Co., Inc., and Memphis Veneer & Lumber Company

The name of Stark has been associated with the early history of the country, as well as the lumber industry of the United States.

The subject company of this sketch, James E. Stark & Co., Inc., manufacturers of hardwood lumber, mahogany and veneers, has been in the lumber business from the time when the center of this industry was in Albany, N. Y., has followed the westward and then the southward trend of the lumber trade, for the past twenty years, has made itself a potent factor commercially, and to-day is representative of the highest type of development in the manufacture and marketing of hardwood lumber, which includes oak, ash, poplar, mahogany, and all southern hardwoods, as well as sawn veneers, oak flooring, and other forest products.

Modern Dry Kiln, Capacity 250 M. Ft. Memphis

A SAMPLE OF OUR RED OAK

The firm has a band saw mill of 50,000 foot capacity, located in Memphis, and a band sawmill with a capacity of 30,000 feet at Dyersburg, as well as a veneer plant at Memphis which produces 50,000 feet of sawn veneers daily. The illustrations can convey only a partial idea of the very large and continuously expanding operations.

This company has the one ambition of increasing efficiency, thereby giving the trade a higher standard of product at a lower cost of production and a relatively lower market price. It operates its own logging equipment, including skidders and log loaders, and with every facility for producing high-grade stock, its modern methods of kiln and air-drying the products, it should commend itself to all who are buyers of hardwood lumber.

One of its affiliated companies is the Memphis Veneer & Lumber Company, manufacturer of lumber and veneers, and another is the Memphis Hardwood Flooring Company, manufacturer of oak flooring. Both are located in Memphis.

The personnel of James E. Stark & Co., Inc., is made up of thoroughly practical lumbermen in each department. James E. Stark, the president and executive head, is well enough known as a practical lumberman to need no further introduction. M. C. Raymond, vice-president, came up through the ranks of the lumber industry in the producing end of the business, having been connected with several of the older houses, at one time operated a mill, and is in full charge of the operating end of the business. John E. Walsh, treasurer and sales manager, has been associated with the company for a

good many years, and has become an expert in the marketing of hardwood lumber, veneers and oak flooring. He is thoroughly acquainted with the requirements of the different lines of consuming trade, and is so well and favorably known by that trade that they have learned in trusting to his judgment in filling orders that they will be given most careful and painstaking attention. Under Mr. Walsh and associated with him in handling the sales are J. E. Thomas in charge of lumber, and J. C. Steele in charge of veneer, both of whom are practical lumbermen from the school of experience, and who spare no efforts to handle orders to the satisfaction of the trade. E. M. Slattery is another graduate from the school of lumber experience, con-

tinued on page 10

and manager of the company, in charge of the marketing department, with a corps of competent men to assist him. In charge of H. C. Roeske, who is one of the most practical lumbermen in the industry, and who has been an inspector in the past, the very high standing, and is now a director in the company. E. A. Okerblom, secretary, is a product of the lumber industry of Chicago, where he gathered more experience in lumber credits, through the varying vicissitudes of the trade, than would have been possible in any other trade center. He is an encyclopedia of the lumber financial trade, and is broad and liberal in his views of the practical side of granting lumber credits. No customer has had cause to complain of either his judgment or treatment in this department. He is in charge of the financial end of the business, and his department is conscientiously and thoroughly handled. Another practical and efficient manager of the business, and this story would not be complete without mention being made of him, is C. E. Somers, local manager at Dyersburg, who is a sawmill man of long experience, and whose judgment is considered of the highest value in all matters pertaining to the production of hardwood lumber, and whose efficient management has enabled the reputation of high-grade Tennessee hardwoods to be fully maintained.

All department heads of this company are men in the prime of life and the most productive period of their lives, and we may look for far greater accomplishments in the future.

The Mail Bag

B-1148—Persimmon and Dogwood Squares

Marvell, Ark., December 1.—Editor HARDWOOD RECORD: Can you tell us where we can find a market for persimmon and dogwood squares?

B-1149—Cherry Wanted

New York, N. Y., November 28. Editor HARDWOOD RECORD: We are after some 4/4 and 5/4 firsts and seconds cherry and probably you can advise us where we can purchase this stock.

B-1150—In the Market for Hard Maple

Pittsburgh, Pa., December 1. Editor HARDWOOD RECORD: We are trying to find the following: 1,000 ft. lin. 6x6 FAS and 300 ft. lin. 8x8 FAS hard maple, dry. Can you place us in communication with dealers who handle this class of stock?

B-1151—White Pine Needed

Philadelphia, Pa., December 1.—Editor HARDWOOD RECORD: We are in the market for one or two cars 4/4 plain sycamore, preferably steam kilned, and about 400,000 feet 4/4 white pine, box shorts or similar grade. We would be pleased to hear from mills able to make delivery.

B-1152—Dimension Stock

Chicago, December 1.—Editor HARDWOOD RECORD: We are in need of the following dimension stock, and would appreciate it if you can get us in touch with people who might be interested: Basswood, poplar or pine:

No. 1	No. 2	No. 3
$\frac{3}{4}$ x 18 $\frac{1}{2}$ x 44 $\frac{1}{2}$	$\frac{3}{4}$ x 16 x 41 $\frac{1}{2}$	$\frac{3}{4}$ x 17 x 35 $\frac{1}{2}$
$\frac{3}{4}$ x 11 $\frac{1}{2}$ x 44 $\frac{1}{2}$	$\frac{3}{4}$ x 10 $\frac{1}{2}$ x 41 $\frac{1}{2}$	$\frac{3}{4}$ x 11 $\frac{1}{2}$ x 31 $\frac{1}{2}$
$\frac{3}{4}$ x 11 $\frac{1}{2}$ x 18	$\frac{3}{4}$ x 2 x 41 $\frac{1}{2}$	$\frac{3}{4}$ x 11 $\frac{1}{2}$ x 16
$\frac{3}{4}$ x 2 x 44 $\frac{1}{2}$	$\frac{3}{4}$ x 10 $\frac{1}{2}$ x 15	$\frac{3}{4}$ x 2 x 35 $\frac{1}{2}$
$\frac{3}{4}$ x 2 x 15	$\frac{3}{4}$ x 2 x 13	$\frac{3}{4}$ x 2 x 14
No. 4	No. 5	No. 6
$\frac{3}{4}$ x 16 x 32	$\frac{3}{4}$ x 14 $\frac{1}{2}$ x 26 $\frac{1}{2}$	$\frac{3}{4}$ x 14 $\frac{1}{2}$ x 26 $\frac{1}{2}$
$\frac{3}{4}$ x 10 x 32	$\frac{3}{4}$ x 10 x 26 $\frac{1}{2}$	$\frac{3}{4}$ x 11 x 26
$\frac{3}{4}$ x 10 x 15	$\frac{3}{4}$ x 10 x 14	$\frac{3}{4}$ x 11 x 13 $\frac{1}{2}$
$\frac{3}{4}$ x 2 x 32	$\frac{3}{4}$ x 2 x 26 $\frac{1}{2}$	$\frac{3}{4}$ x 2 x 26 $\frac{1}{2}$
$\frac{3}{4}$ x 2 x 13	$\frac{3}{4}$ x 2 x 12	$\frac{3}{4}$ x 2 x 11

B-1153—Wants Market for Small Pieces

Dickson, Tenn., December 5.—Editor HARDWOOD RECORD: We are manufacturing 1" plain oak lumber tent sticks for the government. The shortest length they use is 16". We find we have quite a lot of good clear pieces which are 1" and 1 $\frac{1}{2}$ " wide, shorter than 16", and write to ask if you know of any consumers using this kind and ask you to give us a list. We could cut this up any length and remanufacture for width if we could find the proper consumer.

Anyone in position to use this material profitably can have the address of the correspondent on writing HARDWOOD RECORD.—EDITOR.

B-1154—Has Cherry For Sale

Brookline, Mass., December 6.—Editor HARDWOOD RECORD: Do you know if any of the airplane people can use cherry? If so, could you tell me the grades and the thickness, and who is using it? I have just taken up a block of very nice cherry.

Anyone interested in cherry for this or other purposes, can probably locate a good source of supply through this letter.—EDITOR.

B-1155—Wants Built-Up Stock

London, E. C., November 14.—Editor HARDWOOD RECORD: We shall be glad if you could put us in touch with manufacturers of American three-ply wood. We want stock 3, 4, 5, and 6 m/m thick, but the bulk

of the order will be 3 and 4 m. m. The sizes will be 48" x 48", if possible, but smaller sizes would be taken to suit the mill. The inquiry we have is for a large quantity.

Clubs and Associations

North Carolina Foresters to Meet

The eighth annual meeting of the North Carolina Forestry Association will meet at Wilmington January 25, 1918. The people of North Carolina have taken hold of their forestry matters in an energetic way and are giving special attention to educating the school children along that line.

Gum and Oak Associations Plan Consolidation

Plans which have been under discussion among lumbermen for some time, looking to the amalgamation of the interests of hardwood producers "into a comprehensive organization which would retain the present functions of the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association and at the same time permit wider activity in a greater field of endeavor," are rapidly coming to a head and indications are that the two associations at their annual meetings to be held here the third week in January will complete the steps already taken in this direction.

The committee appointed to handle all the preliminary details made a report to the boards of directors of the two associations at a meeting held in Memphis, December 1, and the board of each unanimously accepted the organization plan and ordered it transmitted to the members of the two associations. The final movement is therefore clearly up to the general membership of these two bodies at the annual meetings.

The full history of the negotiations so far conducted and the present status of the movement are contained in the following letter, which has been mailed to all members of the two associations by J. T. Kendall, secretary of the Oak Manufacturers' Association, and C. E. Van Camp, acting secretary of the Gum Lumber Manufacturers' Association:

Last June an informal meeting of lumbermen was held to discuss the advisability of amalgamating the interests of the hardwood producers into a comprehensive organization which would retain the present functions of the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association and at the same time permit wider activity in a greater field of endeavor. A committee of fourteen representatives was chosen from the two associations and this committee organized as follows: W. B. Burke, Lamb-Fish Lumber Company, Charleston, Miss., chairman; M. B. Cooper, Three States Lumber Company, Memphis, vice-chairman, and R. L. Jurden, Penrod, Jurden & McCowen, Inc., Memphis, secretary. The other members are: E. A. Lang, president of the American Oak Manufacturers' Association, Chicago; H. B. Weiss, president of the Gum Lumber Manufacturers' Association, Memphis; James E. Stark, R. M. Carrier, E. O. Robinson, J. W. McClure, W. C. Bonner, F. K. Conn, R. H. Darnell, W. H. Dick and B. F. Dulweber.

This committee has held several meetings, and, following that held in Memphis Saturday, December 1, it reported to the board of directors of the two associations the following resolutions:

WHEREAS, Discussion develops that a material saving in time, effectiveness and expense can be accomplished by centralizing the activities of the oak and gum associations into one strong and comprehensive organization, and

WHEREAS, There has been recently presented to the American Oak Manufacturers' Association a petition requesting that the constitution of that organization be broadened to permit the exploitation of other woods of contiguous growth, indicating thereby a popular demand by southern hardwood manufacturers for one general organization to handle hardwoods, and

WHEREAS, Your committee believes that this consolidation can be effected without the loss of the good will and prestige which have been gained by both associations through their advertising campaigns and other activities, therefore be it

RESOLVED, That the board of directors of both associations present to the membership of each association at their next annual meeting this matter for their consideration and approval.

The organization plan was then presented, fully discussed and unanimously accepted by the boards of the two associations for transmission to their respective members in accordance with the requirements of the by-laws and constitution under which the associations are now working.

At the annual meeting of these two associations to be held here in January, the matter will be brought up for final decision and it is to be hoped that every member of the two associations will attend these meetings and express his sentiments on the subjects. It is the biggest movement undertaken by hardwood producers in the history of the industry and should be given much thought and decisive action at the proper time.

The name of the new organization, the field it will cover, the hardwood items it will champion and all other essential details will receive the attention of the two annual meetings after they have adopted the foregoing recommendations of the committee and the boards of directors of the two associations.

Memphis Lumbermen Take Steps to Improve Living Conditions of Their Employees

Improving the living conditions of their labor and thus preventing a further exodus of negroes from Memphis to other parts of the country was one of the principal subjects engaging the attention of members of the Lumbermen's Club of Memphis at the last meeting held here some days ago. And, because it was impossible at that time to go into the subject in detail and to work out means of bringing about such improvement, this subject will be the principal one coming before the meeting of this organization Dec. 8.

There was a special meeting of the club held Nov. 14 at which representatives of the Southern Industrial Race Elevation Association appealed to members of the former to co-operate with the latter in the efforts now

being made to "keep Memphis negroes in Memphis." These representatives suggested that living conditions of the negroes might be substantially improved if members of the club cooperated with this organization which holds the leadership of the negroes in this part of the country. The lumbermen concurring in this view, a special committee was appointed to take the subject up further, composed of S. B. Anderson, chairman; J. O. Goshorn, C. R. Ransom, R. J. Lockwood and A. E. Mahannah.

This committee, through Col. Anderson, brought the subject to the attention of the regular meeting. Mr. Anderson said that there were several ways in which the condition of the negro labor employed in sawmills and lumber camps might be improved. He suggested that coupons be issued by lumbermen employing negro labor, coupons that could be used in buying goods at substantially lower prices. He said that this would prevent installment-plan buying and that it would also prevent the negroes from getting into debt and falling into the hands of the deputy sheriffs. He also suggested that, if the coupon plan did not prove practicable, stores might be maintained at the mills and camps where negroes could secure their provisions and other supplies at reasonable prices.

Mr. Anderson asserted with some emphasis that, if the lumbermen did not take steps to improve the living conditions of their labor, they would soon have no labor. He thought the deputy sheriff problem was the most serious and said that it was up to the lumbermen to give the authorities to understand that they would not, even for a moment, countenance the robbery of their labor through so-called legal processes. He mentioned the road tax law, whereby every man between certain ages must either work so many days on the roads or pay a commutation tax of \$3.50. He declared that the collection of this road tax furnished the deputy sheriffs with an opportunity which they improved to the utmost, as shown by the fact that whereas the original bill was only \$3.50, it was run up to \$7.90 if it became delinquent and passed into the hands of the deputy sheriffs.

Mr. Anderson arranged for representatives of the Southern Industrial Race Elevation Association to address the meeting of the club, but there was a misunderstanding on the part of the proposed speakers regarding the hour and the club deferred definite action until these men can appear and explain to the lumbermen something of the difficulties under which negro labor is operating and something of the problems which must be solved if Memphis negroes are to be kept at home. The club is keenly alive to the importance of taking definite and tangible measures to prevent further inroads on the labor supply of this city and section and the subject will be handled vigorously at the next meeting.

"What is 'invested capital'?" is another question that was brought prominently before the lumbermen when S. B. Anderson, chairman of the law and insurance committee, read a letter from Daniel C. Roper, commissioner of internal revenue, asking that he call together several representative lumbermen and write him their ideas regarding their interpretation of the term "invested capital." Mr. Anderson had prepared a reply to this official and, after considerable discussion, which showed a rather wide divergence of views on the subject, it was decided by unanimous vote that this should be forwarded as expressing the sentiment of the entire club's membership. The reply, which had been held up pending such endorsement, follows:

After a careful study of the provisions of the bill and discussion of the different paragraphs, the consensus was that as applied to the lumber manufacturing business, the capital stock and surplus shown on the books and in actual use in the business, should be figured as invested capital. This invested capital consists of mills, necessary equipment for operating mills and lumber yards, stock of logs and lumber on hand, receivables and timbered lands. All these items are essential to the successful operation of the business. There is no item that can be eliminated.

The opinion of the lumbermen in consultation was that the surplus used in the business is a part of the invested capital, the same as the amount of money paid in as capital stock. Some of the concerns have comparatively small capital and are operating very largely on the surplus instead of increasing the capital stock in accordance with the demands of the business. In such a case, it would be palpably unjust to figure "invested capital" without figuring in the surplus, which is very largely instrumental in the conduct of the business and largely responsible for the earnings of dividends.

Owing to the fact that the value of a sawmill depends entirely on the ability to secure a continuous supply of timber, it has been the practice of lumber manufacturers to charge off a considerable per cent of the cost of plants each year. If this practice should not be followed and the mill should not be charged off to profit and loss before the supply of timber is exhausted, at that time an asset would appear on the books which would be of very little actual value. A sawmill without a supply of timber has only a wreckage value. It is contended by some of the manufacturers that in addition to the capital stock and surplus shown on the books and invested in items named above, a fair valuation should be placed on the plant regardless of the fact that the value carried on the books is considerably less than the actual cost of the plant. This item, together with the capital stock and surplus, should show the invested capital.

Six applications for membership were filed at this meeting. They were referred to the committee on membership and will be voted on at the next meeting. There has been a remarkable growth in membership since the club resumed its sessions this fall.

The attendance at this meeting was the largest in quite a long while. Ralph May presided. The usual luncheon was served.

The Hardwood Campaign

The Northern Hemlock and Hardwood Manufacturers' Association and the Michigan Hardwood Manufacturers' Association have outlined a definite program for their campaign in supplying the government. They are prepared to supply and expect to supply wood for the following purposes:

Boxes and crates, saddle trees, portable houses, gun stocks, airplanes, escort wagons, auto trucks, ship timbers and finish, cot material, tent poles and parts, target practice supplies, and artillery wood.

A Call to Lumbermen

The executive committee of the National Lumber Manufacturers' Association, the members of which committee are R. B. Goodman, R. H. Downman, J. W. Blodget, C. A. Bigelow, J. W. Embree, Edward Hines, Charles S. Keith, A. L. Palmer, and W. H. Sullivan, has sent an appeal to all persons engaged in the lumber industry in the United States, putting up to them the problems which the war has brought forward for solution. The call follows:

It is only by greater cooperation as this cooperation is organized in the associations of manufacturers and dealers that the lumber industry can intelligently, promptly, and efficiently respond to the demands made upon it by the administration of this war.

In addition and paramount to the normal functions of association work in times of peace, are now new and unusual tasks in which we have no established precedents to guide us. The old channels of trade are rapidly shifting in all industries, including our own. The scope of our association activities must now cover many new fields, meet many new conditions, solve many new problems, disseminate an entirely new propaganda. The associations must, through their secretaries, officers and boards of directors, enlist every member in a closer unity than has ever yet been attempted within and between the great lumber producing regions of the country. We must earnestly and collectively begin the task of eliminating industrial waste, increasing production efficiency, economizing distribution; we must summon collectively the best experts in our ranks to fit our products to the constantly arising new demands of our army and navy. Already we have begun to meet these new demands through the formation of emergency bureaus in the different producing regions working in cooperation with the lumber committee of the Council of National Defense. Our response has been prompt and our meeting of the government needs is already a record for us to take pride in, but what has been done is simple and comparatively small compared to what we will be called upon to do as the intensity of the war administration develops as it must be developed to win the war. For our industry to meet these new problems as they arise necessitates an unprecedented demand on the part of our associations and upon the time and thought and energy of individual lumbermen. Subscriptions, assessments, and dues will no longer meet the situation. Every member of every association in the industry must do his part by attending the regular meetings, willingly and earnestly serving upon committees, making what may appear to be sacrifices in the matter of valuable time in carrying on this co-operative work.

No longer can salaried secretaries and, in some cases, a mere handful of principals carry on the co-operative work of the industry, however liberally they may be supplied with funds. Every association member must put the same intelligent effort and untiring energy into his association work that he puts into the operation of his private business.

While we make this plea as an appeal to individual patriotism it might also be made as an appeal to your individual and private interest. For all that you have and all that you gain is dependent no longer so much on your individual effort as it is upon the success of your co-operative work. This is true of your day's business, of your prospects for the coming year and of the ultimate future of your operation; it is true in a still greater sense of your immediate and of your future career as a loyal American citizen.

You are needed at more meetings than you ever have dreamed of attending; you are needed for more association work than you have ever before felt you had time to give and the services that are needed from you are not perfunctory in character, but call for the best you have to give.

And you manufacturer, and you dealer in lumber who are not association members have plainly before you now in our great need of industrial co-operation and efficiency no possible excuse that can justify you in shirking the obvious duty of co-operating with your brothers in our common industry.

Southern Lumbermen Discuss Car Shortage

The shortage of cars for handling logs to the mills as well as for handling the outbound shipments of lumber from points in the South is going to be brought as forcibly as possible to the attention of the proper authorities at Washington in the immediate future with a view to securing relief for hardwood lumber manufacturers and those engaged in woodworking lines south.

This was decided at the joint meeting at Memphis, Friday, November 30, of the governing board of the Southern Hardwood Traffic Association and members of the Southern Logging Association. Fifty-five lumbermen were in attendance from Arkansas, Tennessee, Mississippi and Louisiana, and it was agreed that authentic information should be compiled showing how lumber mills throughout the southern hardwood field are threatened with suspension of operations because of the shortage of cars and that this information should be submitted to officials in Washington with a view to having more cars diverted into the South.

Twenty manufacturers who attended the meeting agreed to assist in the compilation of data bearing on the shipping situation and the position of the mills with respect to log supplies and they further agreed to go to Washington to place the whole question properly before the authorities. They are:

J. W. Dickson, president of the Valley Log Loading Company; R. L. Jurden, Penrod, Jurden & McCowen, Inc., and a member of the Southern Hardwood Emergency Bureau; John W. McClure, Belgrade Lumber Company; W. H. Russe, Russe & Burgess, Inc.; C. B. Dudley, Dudley Lumber Company; J. F. McSweyn, Memphis Band Mill Company; R. E. Dickerson, Frank May, May Brothers; Frank B. Robertson, Ferguson-Palmer Company, Inc.; F. T. Dooley, Dooley Lumber Company; Robert Stimson, Stimson and Veneer & Lumber Company; W. A. Ransom, Gayoso Lumber Company and a member of the Southern Hardwood Emergency Bureau; and James E. Stark, James E. Stark & Co., all of Memphis; J. E. Swanson, H. B. Richardson and Paul Smith, of Helena, Ark.; Frank F. Fee, Dermott, Ark.; W. B. Morgan, Morgan Veneer Company, Pine Bluff, Ark.; W. B. Burke, Lamb-Fish Lumber Company, Charleston, Miss., and a member of the Southern Hardwood Emergency Bureau; and A. S. Johnson, of Winnfield, La.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic

Association, was instructed at the joint meeting to proceed to Washington to prepare for the committee's visit. He will ascertain what is necessary to be done to obtain relief, so that the committee will be in position to take the most effective means possible to accomplish the purpose of the visit. Mr. Townshend left December 4 for Washington. Meantime the committee will begin the compilation of the data bearing on the subject at issue and will respond immediately to a call from Mr. Townshend to come to Washington.

The report to be compiled by the committee will not only show to what extent hardwood manufacture is being forcibly curtailed through the shortage of cars, but it will also show how many government orders in the hands of hardwood manufacturers are being delayed through lack of the necessary cars for handling raw material to the mills. The committee will also, in accordance with a motion offered by John W. McClure, prepare statistics showing the enormous quantities of hardwood lumber on hand at present at the mills, as result of shortage of equipment for its transportation, and will also show how vast are the requirements of the government for hardwood lumber.

Reports made to the meeting showed that logs are piling up along the lines of railway in the southern hardwood region because of inability of the railroads to furnish transportation to the mills and that lumber plants, in consequence, are operating with only a scant supply of logs on hand. They also indicated that many of the mills are being forced now to shut down at intervals because they have to await logs before they can operate.

J. W. Dickson, president of the Valley Log Loading Company, said that his firm had been seriously handicapped all autumn through car shortage and that part of its machinery would have to suspend operations because there are not sufficient cars to keep the loaders busy. He said that it had been impossible to operate the equivalent of two full weeks on the Memphis-Marianna cut-off on the St. Louis, Iron Mountain & Southern the entire fall.

W. B. Morgan of the Morgan Veneer Company, Pine Bluff, Ark., reported the car supply in the Pine Bluff district wholly inadequate with the result that many mills were on the verge of a shut-down.

Operators of mills in the country districts declared that they have large quantities of fuel wood ready for moving and no cars in which to move it. It was decided that efforts should be made to secure cars for handling this fuel wood with a view to relieving the coal shortage.

Transit arrangements also came in for much discussion. Under present plans lumber manufactured from certain logs must be shipped out over the line of railway which brought in the logs. It was agreed that some modification of this arrangement would be necessary during the period of the war, since any effort of the roads to insist on the terms of this transit agreement would render ineffective a general distribution of cars among all the roads. This will also be taken up with the authorities at Washington.

Walker Wellford of the Chickasaw Coopersage Company and president of Associated Coopersage Industries, gave it as his opinion that the car supply in the South would not be materially increased until more export freight is moved through the gulf ports. He declared that South Atlantic and gulf ports have been practically abandoned since the beginning of the war, with tremendous resultant congestion of freight cars enroute to North Atlantic ports.

Frank F. Fee of the Fee-Crayton Hardwood Lumber Company suggested that proper thought be given to the building of cars for logs and lumber to give greater capacity.

Elliott Lang of R. J. Darnell, Inc., recently returned from Washington, said he had enlightened the Car Service Commission on the car situation south as affecting hardwoods and that some relief had been promised.

Other lumbermen back from Washington reported that the government is anxious that hardwood mills be operated continuously at full capacity because their operation is regarded as a vital factor in the successful prosecution of the war.

E. O. Davis, acting secretary of the recently launched Southwestern Manufacturers' Club, Beaumont, Tex., announced that that organization would co-operate in any movement looking to relief from the present unfavorable car situation.

The opinion was freely expressed during the meeting that the railroads are not doing their utmost to furnish relief. Complaints were registered on the score of delays in placing empties, of pulling loaded cars, of poor handling, of insufficient switching and of other deficiencies in the management of the roads. These complaints, substantiated by relation of actual experience in this respect, will be embodied in the report to be submitted to the Car Service Commission and the Interstate Commerce Commission at Washington.

The need of a representative of the Southern Hardwood Traffic Association in Washington for the period of the war was discussed favorably but action thereon will not be taken until the next meeting of the board of governors of this organization.

Transportation Committee Meets

The transportation committee of the National Lumber Manufacturers' Association met December 1 at the Lumber Exchange building, Chicago, and the following representatives were in attendance:

California Redwood Association—W. R. McMillan.
Michigan Hardwood Manufacturers' Association—J. C. Knox.
Northern Hemlock & Hardwood Manufacturers' Association—A. L. Osborn.
Southern Cypress Manufacturers' Association—E. W. McKay.

Southern Pine Association—A. G. T. Moore, W. T. Hancock, F. G. Wisner, G. F. Thomas.

West Coast Lumbermen's Association and Western Pine Manufacturers' Association—L. S. McIntyre.

North Carolina Pine Association, Northern Pine Association, Western Carolina Lumber & Timber Association—Represented by W. A. Wimble.

National Lumber Manufacturers' Association—R. S. Kellogg.

National Association of Box Manufacturers—Jas. C. Jeffrey.

The main purpose of the meeting, as announced in the call, was the consideration of the tentative final report of Examiner Esch under I. C. C. Docket No. 8131. After full discussion of the various aspects of the case the following resolution was unanimously adopted as expressing the attitude of the committee thereon:

The transportation committee of the National Lumber Manufacturers' Association once more reaffirms its position with respect to the proposed reclassification of lumber as expressed in the resolution adopted at the meeting on September 16, 1915, the meeting on January 17, 1917, and still further expressed through the proposed classification recommended by the committee under date of April 4, 1917, the latter classification specifying three groups of articles—viz., Group No. 1 listing products of saw and planing mills and accessory lumber plants that should move uniformly on the lumber rate throughout the United States, whether in straight or mixed carloads; Group No. 2, products of a more advanced stage of manufacture which may properly take a higher rate than lumber, and Group No. 3, miscellaneous forest products which should be accorded specific rates based upon the merits of individual cases, and in general lower than lumber rates, but in no cases higher than lumber rates.

The committee reaffirms all of its previous declarations and statements of position presented to the commission under Docket 8131, which are a matter of record, and believes that the tentative conclusions of Examiner Esch in this case are not in accordance with these principles nor based upon evidence presented at the hearing.

In view of the existing conditions confronting the country growing out of the war and the radical nature of the examiner's tentative conclusions and the disruption which would result if adopted, we urge that this case be put on the indefinitely suspended docket, and if the commission do not see fit to sanction such procedure that the report of the examiner be subject to further hearing by the commission and presentation of pertinent evidence by counsel representing the National Lumber Manufacturers' Association and its affiliated interests.

The secretary was instructed to transmit copy of this resolution to the Interstate Commerce Commission, and also to the carriers who appeared in the case. He was also instructed to ask the secretary of the affiliated associations to furnish Judge Wimble with a statement of their exceptions to the Esch findings and proposals not later than December 10, in order that he may bring all of the matter together for presentation to the commission.

Baltimore Lumber Exchange

The annual meeting of the Baltimore Lumber Exchange was held December 3 at the Merchants' Club, and an attempt was made to put the exchange on a better footing. That was the keynote of Pembroke M. Womble's address. He pointed out that concert among the members was what was needed, and he urged that petty jealousies be forgotten and all members work together.

This idea found further expression in the recommendation, contained in the annual report of the president, Parker D. Dix, that a room or rooms be secured, which would be used as permanent headquarters of the exchange, to be open during certain hours every day, where the members might meet to get better acquainted and where business and other matters could be talked over, with the result of making the headquarters a central point for the trade. This recommendation was approved by the exchange by unanimous vote.

A patriotic touch was introduced, suitable to the war situation, when Rufus K. Goodenow proposed that a standing toast be drunk to the President of the United States.

John L. Alcock in the course of a few remarks at the dinner following the business session expressed his high appreciation of the privilege of being an American citizen, which, he said, he had gained, not by birth, but from choice, he having come from England and been naturalized. Mr. Alcock went on to say that this privilege carried with it certain solemn obligations, which at this time called for self-sacrifice and high patriotism, to the end that the blessings of peace might again be vouchsafed to the peoples of the world.

Various other short addresses were delivered as the company lingered over coffee and cigars.

The dinner lacked some of the more elaborate features of similar events of former years in consideration of the fact that this is war time. The decorations and entertainment were omitted, though the menu was very substantial and not less enjoyable than before. The feast was preceded by the business session at which the annual reports of the officers were read and the annual election took place. The reports showed the exchange to be in good condition, with 9,140,082 feet of hardwoods inspected during the year, which is rather over the average and shows a good volume of business done. Of course, the vast bulk of the business going through the hands of the Baltimore lumbermen is not inspected here, so that the records of the exchange inspection do not really show the amount of trade.

President Dix in his address stated that the volume of business for the past year compared favorably with former years, though the past year was one of the most trying and vexatious the exchange has had in its history. He expressed apprehension that the coming year would bring trials and vexations, and that owing to the enormous calls for foodstuffs and other supplies, the box and shoo manufacturers will have consider-

able trouble in meeting the great demand that will be made upon them for containers, and the problem of housing the rapidly increasing population of the city, with the many new manufacturing and other enterprises, together with the government work that is going on, will give the retail dealers and others their difficulties to get a supply of lumber sufficient to meet the calls that will be made upon them, but a generally prosperous year seems to be assured.

The election of officers resulted as follows:

PRESIDENT: Parker D. Dix.
Vice President: Pembroke W. Worley.
TREASURER: L. H. Gwaltney.
MANAGING COMMITTEE: Pembroke W. Worley, John E. Alcock, of John E. Alcock & Co.; F. A. Ascher, of James Lumber Company; W. Hunter Edwards, B. W. Edwards & Sons; Lewis Jull, Lewis Jull & Co.; Henry P. Dreyer; Rufus K. Goodenow; Daniel MacLean, MacLean Lumber Company; Bridgeway Merryman; Theodore Motin, Theodore Motin & Co.; David M. Wolf, Canton Lumber Company, and John H. Zonck.

The secretary will be elected later by the managing committee, and there is every indication that Mr. Gwaltney will be continued in the office.

The question of the inspection rules under which the exchange works came in for some discussion, the point being raised whether, since the exchange has adopted the rules of various associations peculiar to the respective woods, any changes adopted by these organizations would have to be acted upon especially by the exchange or the managing committee, or whether they would go into effect automatically from time to time. The question was finally referred to the inspection committee for its recommendation.

The liability of the exchange for injury to any of the inspectors also came up, it being the opinion that the exchange itself would not be liable under the law, but that the individual firms or corporations employing the inspector injured would be.

Memphis Club Nominates

The following candidates for officers of the Lumbermen's Club of Memphis for the ensuing year were announced by the nominating committees at the meeting of the Lumbermen's Club of Memphis on December 3.

RED TICKET. For president, Earl Palmer, Ferguson Palmer Company, Inc.; first vice-president, M. B. Cooper, Three States Lumber Company; second vice-president, R. J. Hackney, Brown & Hackney, Inc.; secretary-treasurer, J. Staley Williford, Bellgrade Lumber Company.

BLUE TICKET.—For president, J. F. McSweeney, Memphis Band Mill Company; first vice-president, J. H. Hines, Hines Lumber Company; second vice-president, D. E. Heuer, A. N. Thompson & Company; secretary-treasurer, J. Staley Williford, Bellgrade Lumber Company.

Directors on the red ticket are: E. L. McLallen, Nickey Brothers, Inc.; John Walsh, James E. Stark & Co.; and Richard Petrus, Stimson Veneer & Lumber Company.

Directors on the blue ticket are: W. C. Bonner, J. H. Bonner & Sons; R. A. Taylor, DeSoto Hardwood Flooring Company; and Edgar Lehr, Green River Lumber Company.

The reports of the nominating committees were made in most humorous vein by H. J. M. Jorgensen and J. D. Allen, Jr., chairmen, respectively, of the red and blue, while the nominees made brief responses.

The election will be held December 15. Electioneering has already begun and will be kept up to a high pitch until the last vote is cast. These campaigns are conducted in a friendly rivalry and always add much zest to the spirit of good fellowship.

Six new members were elected at the meeting and three applications for membership were filed with the proper committee for action prior to the next meeting.

The question of taking steps that will improve the condition of labor employed at the hardwood plants owned by members of the club came in for considerable discussion. The club decided that final action should be postponed until the next meeting.

There were seventy-three members and visitors present and the meeting was characterized by much enthusiasm. R. C. Stimson, vice-president, occupied the chair in the absence of President Ralph May. The usual luncheon was served.

With the Trade

Moore & McFerrin Suffer Fire Loss

Fire of unknown origin destroyed the sawmill of Moore & McFerrin, on Wolf river, north of Memphis, December 3, with an estimated loss of \$25,000, fully covered by insurance. The mill had not been in operation during the day and the fire is supposed to have been occasioned by sparks from some of the stacks in the vicinity. Firemen from the city fought the blaze for four hours and succeeded in confining the flames to the mill proper, thus saving 4,000,000 feet of lumber and the box factory of the firm located close by.

No announcement has been made by the management with respect to rebuilding, but it is expected that the plant will be replaced in due course.

A Difficult Job

The United States agent who went to Russia six months ago to study the lumber situation is probably not finding the job an easy one just now. Roger E. Simmons was holding the job down somewhere in Siberia at last accounts, but that was before complete anarchy broke loose in that

unfortunate country. Since then no news from Mr. Simmons has been made public; but general news coming out of Siberia has not been reassuring. There are accounts of robbery of travelers as well as of all well-to-do citizens, even in cities and hotels. Persons wearing good clothes are stopped on the streets and compelled to exchange their garments for rags, and are relieved of their money and jewelry. It is to be hoped that Mr. Simmons has not fared so badly as some others in that land where anarchy reigns at present.

Wood Made Waterproof

The Duntun End Grain Up Wood Company was recently organized at Grand Rapids, Mich., to produce wood products by a process which it is claimed will render it impervious to water. It will bear as a trade mark the words "Mo Nark," and it is announced that the wood so treated will be useful for countertops, tables, and wainscoting. Among those interested in the new company are: John C. Duntun, Charles B. Kelsey, Gregory M. Luce, John W. Blodgett, G. K. McMullen, C. P. Foote, A. H. Brandt, A. Otto, James Bayne, James S. Hawkins, Mae Godfrey, H. C. Cornelius, G. A. Krause, James A. Curtis, O. H. L. Wernicke, A. F. Porter, F. T. Hulswit, Fred N. Rowe, Gilbert B. Daane, Charles M. Alden, F. W. Lonsby, and Carroll F. Sweet.

Planing Mill Burns

The Dixie Planing Mills at Dixon, Tenn., one of the largest establishments of its kind in middle Tennessee, which had been working at full speed for some time on a government contract for tent poles, was completely destroyed by fire on November 20. The blaze was discovered about 11 o'clock and spread rapidly, despite all efforts of the fire department. The buildings, together with the lumber yard, were completely destroyed.

H. T. Cowan, president of the company, estimated the loss at \$150,000, with no insurance. At least 100 men will be thrown out of employment as a result of the fire.

Returns to the West

George X. Wendling has returned to the Far West, where he had spent the most of his busy life in the lumber business. Two years ago he accepted a position with an adding machine company in Ohio, but the call of the wild has been too strong for him and the announcement has gone out that he is again in the lumber business on the Pacific coast.

Change in Organization and Ownership

The Bridgeport Wood Finishing Company, Still River, Conn., has announced changes in its organization. The paint and wood finishing department has been sold to E. I. du Pont de Nemours & Co. of Wilmington, Del. The Bridgeport company will continue to operate its silex business and will retain its ownership of the Still River plant, but the name, for convenience, will be changed to the Lithowhite Silex Company, which is more descriptive of the business it will still carry on.

The Last Call

Colonel W. A. Mitchel, in command of the Tenth Engineers, the forestry regiment which has the distinction of being the largest regiment in the world, has sent out the last call to lumbermen who wish to join the regiment. Between now and December 15 men who have been registered can volunteer in the forestry regiment, even though they have been called by local boards to report for physical examination. They can enlist upon presentation to the recruiting officer of the certificate for his local board that he will not be needed to fill any deferred percentage of the quota of its board.

This affords an opportunity to those who understand lumbering to join the foresters. The opportunity ends on December 15, and after that the drafted men will be sent to camps in the United States for training for service abroad.

A Big Hickory Log

Commenting on the big hickory log illustrated on this page, **HARDWOOD RECORD** has received the following letter from Peers & McGlone, who manufacture hickory dimension stock at Bierne, Ark.:

"We enclose herewith a post card picture which explains itself. There may be larger hickory logs than this one, but so far we have not heard of them."

HICKORY LOG 41"x16" MANUFACTURED INTO AUTOMOBILE RIM STRIPS BY PEERS & MCGLONE AT BIERNE, ARK.

Pertinent Information

Southern Carriers Ask for Rate Changes

J. H. Townshend, secretary manager of the Southern Hardwood Traffic Association, has been advised by several southern roads.

That the Southern carriers are going to ask the Interstate Commerce Commission, in conjunction with eastern lines, to grant authority for advances of 2 to 3 cents per hundred pounds on hardwood lumber shipments from all producing points in the South, from the Atlantic on the east to the Rio Grande on the west, to destinations in Eastern Trunk Line territory.

That they contemplate the cancellation of all water and rail rates and all water competitive rates from the Southeast and Carolina territory to eastern points and making the rates to Buffalo-Pittsburgh on the lowest combination.

That they further contemplate advancing rates from all Mississippi points to Virginia cities from 24 cents to 29 cents, or within 3 cents of the rate to Baltimore.

That they will readjust rates from all Arkansas, Louisiana and Texas points to eastern destinations, with some slight possible reductions.

Mr. Townshend says that, while advances in some instances may be as high as 5 to 6 cents per hundred pounds, the general effect will be an advance of 2 to 3 cents per hundred pounds. He says further that the advances now proposed would be considerably less than those asked in the 15 per cent rate case which they are supposed to supplant, amounting to about 7½ per cent.

Just before leaving for Washington to prepare the way for the volunteer committee representing the joint conference of the Southern Hardwood Traffic Association and the Southern Logging Association, with a view to securing relief from the intolerable transportation conditions affecting the manufacture and distribution of southern hardwoods, Mr. Townshend stated that the traffic association had not disclosed its attitude toward this newest proposal on the part of the carriers, but intimated that this would receive attention as soon as he returned from Washington.

Help for the Railroads

The Interstate Commerce Commission filed a special report on December 1 with the Senate and House of Representatives, concerning the situation of the railroads in the crisis produced in transportation by the war. The following extracts show the trend of the report:

Since the outbreak of the war in Europe, and especially since this country was drawn into that war, it has become increasingly clear that unification in the operation of our railroads during the period of conflict is indispensable to their fullest utilization for the national defense and welfare. They must be drawn, like the individual, from the pursuits of peace and mobilized to win the war. This unification can be effected in one of two ways, and we see but two.

The sudden, unforeseen, and unprecedented demand for transportation occasioned by the war placed a strain upon the facilities and equipment of the railroads which they were not and are not prepared to meet. There was created a need for immediate and extensive additions to existing facilities and equipment. This need is coincident with demands upon capital, as well as upon labor, manufactures and natural resources, such as we have never known. Important additions and betterments will require new capital.

Even if the railroads have more money, the immediate construction of necessary facilities and equipment could not readily be effected. Labor is scarce and the cost is mounting. So with materials and supplies. Car and locomotive builders are largely engaged in producing equipment needed abroad, both by our allies and by our own forces in the conduct of the war. The steel and other materials needed for such construction, as well as the labor are also needed in other phases of the conflict. Under such conditions, and pending the acquisition of such additional facilities and equipment, it is indispensable that those now in existence should be used to their fullest capacity, primarily for the uses which are most vital to the country's defense and welfare, but without unnecessary hindrance to the industry and commerce of our people upon which their ability to contribute toward the success of the war so largely depends.

If the unification is to be effected by the carriers they should be enabled to effect it in a lawful way. To that end, in our judgment, the operation of the antitrust laws, except in respect of consolidations or mergers of parallel and competing lines, as applied to rail and water carriers subject to the act to regulate commerce, and of the antipooling provision of section 5 of that act, should be suspended during the period of the war, and until further action by the Congress. In addition they should be provided from the government treasury with financial assistance in the form of loans or advances for capital purposes in such amounts, on such conditions, and under such supervision of expenditure as may be determined by appropriate authority. As a necessary concomitant the regulation of security issues of common carriers engaged in interstate commerce should be vested in some appropriate body, as has been recommended in our annual reports. The rights of shippers for reasonable rates and nondiscriminatory service under the present jurisdiction of the commission need not be seriously interfered with by such unified control. Some elastic provisions for establishment of new routes would probably be needed.

Woods for Government Boxes

Standard specifications for packing boxes for the army have been promulgated by the War Department. The specifications go into complete details regarding the kinds, sizes, grades and thicknesses of lumber to be used, the styles of boxes required and the number of cleats and nails necessary to give the desired strength. For purposes of manufacture the principal woods used for boxes are classified in four groups, as follows:

GROUP 1—White pine, norway pine, aspen, spruce, western yellow pine, cottonwood, yellow poplar, balsam fir, chestnut, sugar pine, basswood, cypress, willow, noble fir, magnolia, white fir, buckeye, cedar, redwood, butternut, cucumber, alpine fir, and lodgepole pine.

GROUP 2—Southern yellow pine, hemlock, Virginia and Carolina pine, Douglas fir, larch.

GROUP 3—White elm, red gum, sycamore, pumpkin ash, black ash, black gum, tupelo, maple, soft or silver.

GROUP 4—Hard maple, beech, oak, hackberry, birch, rock elm, and white ash.

The thickness of the lumber to be used in making boxes and the length of the nails is varied according to these lumber groupings, in order that every advantage may be taken of the natural strength of the particular kind of timber used.

Forest Service Appropriation Asked

Appropriations aggregating \$5,731,000 are asked of congress for the next fiscal year for the United States forest service, in estimates just received by congress. Other estimates submitted include \$500,000 for care of Indian timber, etc., \$500,000 for protecting timber on the public domain, \$83,000 for investigating tree diseases, and \$246,448 for fighting the white pine blister rust.

Interstate Commerce Matters

The Interstate Commerce Commission continues to receive applications from the carriers and their agents for approval of tariffs they would like to file raising the rates or charges on lumber and lumber products in various ways. Among the applications recently received of this character are the following:

From Missouri Pacific R. R., proposing cancellation of tariff I. C. C. No. A-955 (tariff No. 959-B), involving increase of 2.5 cents per 100 pounds in the rates on shaved hoops, carloads, from Chamois, Missouri and St. Aubert, Mo., to Chicago, Ill.

From Great Northern Ry., proposing non-application of the rates on cooage, including wooden pails, barrels, casks, etc., from Cohasset and Hill City, Minn., to Missouri River and other points published in tariff I. C. C. No. A-3355 (G. F. O. No. 895-E).

From Nashville, Chattanooga & St. Louis Ry., proposing increase from 13 to 14 cents per 100 pounds in the rates on lumber, staves, heading and tan bark, carloads, from Bridgeport and Orme Junction, Ala., and Richard City and South Pittsburg, Tenn. (when from certain Tennessee River landings or Southern Ry. stations) to Brookport and Metropolis, Ill. (when for beyond), published in tariff I. C. C. No. 2206-A (Northern and Western Lumber Tariff No. 3).

From Chicago, Milwaukee & St. Paul Ry., proposing increases ranging from 1½ cent to 3 cents per 100 pounds in the lumber rates between Milwaukee, and Granville, Iron Ridge, Grafton and other points in Wisconsin named in I. C. C. B-Nos. 278 and 3362).

From Missouri Pacific Ry., proposing cancellation of Eldorado & Bastrop Ry. I. C. C. No. 17 (M. P. R. R. tariff No. 2781) involving increases in rates on lumber and forest products of 6 cents per 100 pounds from White, and 6½ cents from Venice, Ark., to Natchez, Miss.

From Chicago, Rock Island & Pacific Ry., proposing cancellation of rate of 13 cents per 100 pounds, carloads minimum weight 30,000 pounds, on shingles from Duluth, Minn., and Superior, Wis., to Chicago, published in I. C. C. No. C-9386 (tariff No. 10977-K) and application in lieu thereof of 12 cent rates with scaling carload minimum weights.

M. P. Washburn, agent, proposing restrictions to cordwood only of wood carload rate from Gulfport, Miss., to New Orleans, La., published in item 57, page 71, of tariff I. C. C. No. 189 (G. P.-M. V. tariff No. 2).

Great Northern Ry., proposing increases in carload minimum weight to 30,000 pounds for cars under 36 feet in length and 34,000 pounds for cars 36 feet or over in length, in connection with the rates on lumber and other forest products between points in Minnesota, published in tariff I. C. C. No. A-3955.

Southern Ry. System, (New Orleans & Northeastern R. R.), proposing elimination of the Louisiana Ry. Co. as a participant in the lumber rates to points published in New Orleans & Northeastern R. R., I. C. C. No. 2785 (Tariff No. 640-D).

Missouri Pacific R. R., proposing cancellation of rates on lumber, etc., from Ouachita & Northwestern Ry. stations to C. F. A. trunk line and other territories, via T. & G. Junction, La., Fremont & Gulf Ry., and Rochelle, La., published in tariffs I. C. C. A-Nos. 2726, 2887, 3127, 3213 and 3308 (tariffs Nos. 1503-D, 111)-F, 4953-B, 3793-D and 4202-C).

Another matter taken up at Washington recently was the recommendation of the National Lumber Manufacturers' Association that a special charge for reconsignment of lumber be made effective as a war measure. This matter has been laid before the railroad war board.

The free time allowed on lumber and other export freight is to be reduced from 15 days to 10 days at north Atlantic ports and from 10 days to 7 days at Gulf ports under the recent decision of the Interstate Commerce Commission in the suspension case entitled export freight free time. The commission rejected the railroads' proposal to reduce the free time on export freight at both sets of ports to 5 days.

The lumber traffic affected passed chiefly through the Gulf ports. It was not proposed to change the practice of no limit of time on shipments moving under through export bills of lading, held at New Orleans, Mobile or Pensacola. Commissioner Walley made the report in the case, Commissioner Harlan dissented, holding that the reduction of free time sought by the carriers should be allowed; while Aitchison and Anderson, who are new men on the commission, took no part in the disposition of the case.

The commission heard oral arguments in the complaint of Laona & Northern Ry. against Chicago & Northwestern Ry. The complainant is said to be controlled by the Connor Land & Lumber Company. B. R. Goggins pleaded for the complainant that the defendant should restore allowances paid to complainant before the commission decided the tap line case, for service performed in getting many cars of lumber, etc., to the trunk line, and to pay reparation at the rate of \$2 per car for the past several years, and to establish joint rates with complainant and pay its divisions out of the same on business handled. Intrastate shipments in a state proceeding are based on the same proposition.

R. H. Widdicombe argued for the Northwestern that the complainant had not filed tariffs providing for allowances and divisions and that therefore no claim for the same could legally be paid.

The next day arguments were heard in the complaint of Cornell Wood Products Company against the Santa Fe Ry. Defendant waived argument in this case and the only speaker was W. E. Lamb, representing

complainants. The latter alleges that unreasonable and discriminatory rates on wood pulpboard shipments from Cornell, Wis., to Illinois points, Iowa and other states, are charged and seeks reparation on that account. The case was taken under advisement by the commission.

The commission has received an application from E. B. Boyd, agent, for approval of advanced rates on lumber and other forest products from Minnesota, Wisconsin and Canadian producing points to points of destination shown in tariff W. T. L.—I. C. C. No. 605 (W. T. L. No. 739) predicated on increases from 11 to 12 cents per 100 pounds previously established from St. Paul and Duluth to Chicago, and due also to correction of improper rate alignment now published in individual issues of the Northern Pacific, Great Northern and Minneapolis, St. Paul & Sault Ste. Marie railroads.

The unusual happened when the Department of Agriculture, for the Forest Service, filed a brief as intervenor in the complaint of Willamette Valley Lumbermen's Association against the Southern Pacific. The case is pending before the Interstate Commerce Commission. J. N. Teal represents the complainants.

The government's brief stated that 47,500,000,000 feet of standing timber is in the national forests of the Willamette valley, besides other billions in the forfeited land grant of the Oregon & California Railroad. The sale of the government timber, it is declared in the brief, will be retarded by the rates attacked in the complaint, which, it is said, exclude complainants from territory consuming 40 per cent of the fir timber production. Attention is called by the government to the fact that the timber resources of the country must be developed for war purposes, and it is said that the Willamette valley rate situation hinders this work. Much of the government timber, it is stated, is overripe, and it is declared to be necessary to develop new markets for the product.

Hardwood Planting Recommended

The planting of various hardwood trees to form windbreaks for the protection of farms, etc., is recommended by the Forest Service in a special bulletin on the subject. In the Middle West, where the soil is reasonably moist, it is recommended that cottonwood be planted. Osage orange, green ash, mulberry or locust may also be used. Cottonwood should be underplanted with green ash or red oak to fill in the gaps as the cottonwood grows big and the lower part becomes bare of branches. In the Southwest sagebrush is suggested. Eucalyptus is suitable for California windbreaks, and in the Pacific Northwest it is said that Lombardy poplars and cottonwood are very efficient. Even small willows can be used to advantage in that section. Besides the benefit derived by the farms from the protection of crops by windbreaks, the bulletin tells of direct returns from planting hardwood trees in windbreaks.

The estimates are for annual income per acre, discounted at the rate of 4 per cent from the final value of the timber when cut. No allowance, however, is made for the cost of planting, which it is thought should be charged against the farm crops.

Policy for Water Power Development

An important change in policy regarding the development of water power on government land is suggested in the report of the Secretary of Agriculture, just issued. The secretary says:

The present industrial situation, and particularly the scarcity and high cost of fuel and construction materials, have increased the cost of steam power and make it highly important that action be taken at the next session of Congress. Legislation which will make it possible to safeguard the public interests, and at the same time to protect private investors, should result in securing cheaper water power and in conserving the coal and fuel oil supply. Since three departments of the government are vitally concerned in water-power legislation and its possible terms and would be vitally affected by the administrative handling of matters under such legislation, it would seem desirable to consider whether it is feasible to devise an executive body on which the three departments will be represented and which will be able to utilize to the best advantage all their existing agencies.

The three departments which will be interested in the development of the power are Agriculture, Interior and War, and the proposed commission would represent all three. Heretofore, the Forest Service, which belongs in the Department of Agriculture, has had most to do with the water power business.

Business Must Not Lag

"In time of war prepare for peace" was the slogan that Charles A. Wacker, chairman of the Chicago Plan Commission, carried to the home defense committee of the Chicago City Council in asking that certain public improvements be carried on in spite of the war. The essence of Mr. Wacker's lengthy argument was that the preliminary work on public improvements is comparatively inexpensive, that all other countries at war, including Germany are either going ahead with public and industrial work or planning for work after peace that will prevent idleness and an abnormal demand on charity and that other countries have learned the lesson of conservation of human life.

Mr. Wacker quoted from a New York authority as to what was being done in Europe and asserted that even today France is demolishing tenement houses, so that in the future men will live under more sanitary conditions. England, he said, is planning the improvement of thousands of miles of streets to keep the soldiers busy after the war; planning to

build thousands of homes for workingmen. Germany, he said, was going ahead with the construction of subways, even though women have to be employed.

Positive assurances have already come from Washington, through a member of the newly enlarged Council of National Defense, that the passenger automobile will come so far down in the list of non-essentials as not to restrict seriously the present output of pleasure cars.

Howard E. Coffin, now chairman of the vitally important aircraft production board, frankly points out the danger of cutting down industries which are economically non-essential only in the snap judgment of a few officials. Weak industries will not give the nation pep to beat Germany.

Southern Railroad Outlook

Southern lumber interests see hope of relief from serious car difficulties during the coming winter months in statements from Washington that hundreds of cars loaded with export materials will be shortly converted from the congested eastern districts and routed through New Orleans. This decision is said to have been reached by the railroads' war board. With empties plentiful in this section, mills will have no difficulty in handling northern orders.

The railroads' war board finds Atlantic ports congested with export cargo. The order provides that "immediate measures be adopted to transfer the movement of foodstuffs and other export materials to Southern and Gulf ports." A Washington dispatch says:

As a result hundreds of cars consigned to eastern ports already have been rerouted to New Orleans. The centralization of authority in the railroads' war board makes such prompt action possible, but it is an entirely different matter to insure the presence in New Orleans of the requisite ocean tonnage to keep this freight moving. Some thought, however, has been given to the matter as the war boards' instructions advise that in order to avoid congestion at seaports and regional gateways, the prompt use of embargoes which, it says, "should be established immediately on signs of trouble, without waiting, as has frequently been done, until congestion actually has occurred."

Enormous Building Program

That Great Britain will erect within the first two years after peace half a million or more houses for workingmen, to relieve congested conditions now existing, especially in industrial centers, is forecast in the report of an American consul at London recently received by the State Department, which says:

One of the most important questions in Great Britain for several years past, and one which has assumed political prominence at many electoral campaigns, is that of the housing of the working classes. This subject is now being taken in hand by a departmental committee appointed by the government. It is admitted by the board that 500,000 houses are now urgently wanted, but other authorities estimate that not less than 1,000,000 houses are necessary, costing \$1,216,625,000. On the question of finance, government aid has been promised. In the meantime a grant of \$97,330,000 has been asked for by some housing organizations. The government in November, 1914, decided in favor of a free grant from the exchequer, as well as loans, to permit of local councils charging customary interest without incurring loss; and while that policy is still in force it has, so far, only affected certain munition areas.

Figures on World Crops

Six world crops make a record with corn in the lead. Bumper crops of corn, oats, potatoes, rice, sugar beets, and tobacco for this year are shown by estimates compiled by the International Institute of Agriculture at Rome. Wheat, rye, barley, and flaxseed, however, have fallen below the five-year average of production from 1911 to 1915.

The production of wheat in seventeen countries, not including the central powers, will be 1,868,000,000 bushels, 85.6 per cent of the five year average. Corn raised will amount to 3,312,000,000 bushels, which is 14.1 per cent greater than the average production for the last five years. Other crops are estimated as follows:

	Per cent.
Rye, 147,000,000 bushels.....	92.2
Barley, 587,000,000 bushels.....	96.0
Oats, 2,682,000,000 bushels.....	113.9
Rice, 70,000,000 bushels.....	115.5
Flaxseed, 38,000,000 bushels.....	69.8
Potatoes, 719,000,000 bushels.....	112.4
Sugar beets, 10,000,000 short tons.....	106.6

There is something almost beyond belief in the colossal totals of crop values in this season's results of farming. It would seem that, after twenty years' rise of purchasing power on the part of the farmer, the tendency had at least reached a climax. Some preliminary estimates place the aggregate worth of crops and animal products at the unprecedented sum of \$18,000,000,000 as the American farmers' addition to the national wealth at current prices for the year 1917. Last year it was placed at between thirteen and fourteen billion dollars. But both prices and yields have, as a rule, vastly increased for the current year. At the October 1 price wheat had a record value of \$1,324,000,000, or \$452,000,000 more than the crop of 1916. Oats were worth \$427,000,000 more than that of a year ago. And corn at \$1.75 a bushel had a farm value of \$5,620,000,000.

The Red Spruce

Louis S. Murphy, of the Forest Service, has written a report on red spruce which has been published as Bulletin 544. The scope is not confined to red spruce but includes all of the commercial spruces of the United States, and deals with them from both the lumberman's and the forester's standpoint. It is stated that the total stand of all spruces in the country exceeds 116,000,000,000 feet, board measure, and this is located in the far northwestern states, among the Rocky Mountains and in the eastern states. The red spruce is found in the latter region, chiefly from

Maine to Virginia. South of New York the spruce is chiefly confined to high mountain regions. The subject of reproduction of spruce is discussed at considerable length. If properly protected against fire, young growth will come on where the old has been cut, provided seed trees are within reach of the areas.

Lists of Soldiers

Many firms and corporations are publishing lists of their employees who are serving in the United States army. The officers of the forestry regiments are desirous of showing their appreciation of the assistance furnished by lumber firms whose employees have joined the forces which will do lumber work. The officers of the forestry regiments are desirous of hearing from lumber firms and receiving lists of their employees who have entered this special service. This information should be sent at once to Maj. George H. Kelly, Engineers Regiment, Washington, D. C.

Deposits in World's Leading Banks

According to London *Statist* of November 3, 1917, the deposits in the large banks of the world aggregate approximately \$94,000,000,000. This included no bank whose deposits did not exceed \$100,000,000, and therefore all the banks except the largest were omitted. The figures represented eighty-four banks. The largest was the state bank of Russia, with deposits of \$1,426,665,000; the next is the imperial bank of Germany with \$1,166,775,000; third, bank of England, \$894,325,000; the largest American deposit is in the National City Bank of New York, \$629,125,000.

Mahogany Trade in England

Consul General Skinner reports from London that the controller of timber supplies has withdrawn, until further notice, all restrictions on the trade in mahogany of all kinds. On September 6 the board of trade in England took possession of all mahogany stocks exceeding 5,000 feet, and the more recent action is a reversal of that policy. It is improbable that this action will have much effect on the mahogany business in the United States, unless indirectly through a change in price.

Forests Should Supply Fuel

The government has published a bulletin pointing out the advantages of using wood as fuel while coal is scarce and high in price. People who live within easy shipping distance of forested regions have doubtless thought of this method of conservation. Weight for weight, it is generally counted that coal furnishes twice as much heat as wood; but before anything like exact comparisons can be stated the kinds of wood and the kinds of coal must be stated.

Seasoning of Wood

Books relating to methods of handling wood in various forms have been following one another from the press fairly rapidly in the past few months. The latest contribution to literature of that class has just come from the press of the D. Van Nostrand Company, New York, and from the pen of Joseph B. Wagner. It is a book of 250 pages, well printed and handsomely illustrated. The book does not impress the reader as containing many results of original investigations by the author; but it reviews much work done by others and draws practical conclusions. One of the strongest features of the work is its illustrations of dry kilns and apparatus to facilitate the seasoning of various kinds of forest products. This part of the book contains seventy pictures covering machines, tools, and appliances useful in and about the kiln, as well as a number of types of kiln.

The book is not wholly taken up with the subject of wood seasoning, but about one-third of the space is devoted to a discussion of forests, wood species, and the technology of wood. In some matters Wagner does not precisely agree with some other authors who have written on the subjects; for instance, he differs from both Sudworth and Sargent in the nomenclature of American trees, or some of them; and his explanation of bird's-eye figure, that it is due to attacks by insects and is confined near the heart of the tree, is not exactly the view which some other writers have held.

The book is sold by the publisher at \$3 a copy.

Semi-Annual Red Cross Report

The war council of the Red Cross has published its first semi-annual report, covering 144 pages of printed matter. The recent nation-wide campaign to raise a fund of \$100,000,000 for this work makes the report a matter of general interest, and following are a few of the points brought out:

The campaign for \$100,000,000 has produced \$88,000,000 to date, and this will be exhausted by spring.

Forty-nine base hospitals have been equipped for the army and five for the navy.

Twenty sanitary units have been equipped to look after camps.

Red Cross nurses enrolled for service number 14,000, of whom 2,000 are working abroad.

Millions of women have been mobilized for work on surgical dressing, etc. Courses in home care of sick and in dietetics have been completed by 34,000 women.

Red Cross membership has grown from 200,000 at the beginning of the war to 5,000,000.

The Red Cross is serving 3,423 military hospitals.

Foodstuffs to the value of \$2,870,000 have been furnished for military and civilian relief in France.

The work has been extended to all belligerent countries.

The Burl Record Broken

A redwood burl nine feet in diameter and weighing seven tons has been brought out of the woods of northern California and is on exhibition in San Francisco. It grew one hundred and fifty feet from the ground. The tree fell and was consumed by fire, but the burl was little damaged, except that a hole was burned through its center. This is the largest burl in existence, so far as known. The Field Museum in Chicago has a section of one nearly as large that was brought a few years ago from the redwood region.

Interesting Dispute on Fire Loss

Gratifying progress is being made in the movement of the fifty-seven cars of hardwoods, which had been held at Atlantic ports ever since March 25, 1916, under a British order in Council, and permission to forward which was recently obtained from the British authorities. A number of the cars have been moved from Baltimore and others from New York, Philadelphia and Boston. Norfolk and Newport News appear to offer less facilities, and it has been arranged to divert the shipments held there to other ports, no cargoes going out of Newport News that require dunnage. The arrangements for the shipment were made by Harvey M. Dickson, secretary of the National Lumber Exporters' Association, at the conference which he held with Connop Guthrie, British minister of shipping in New York. Three of the cars which belonged to Smith & Co. of Parkersburg, W. Va., were lost in the big fire at the docks of the Baltimore and Ohio railroad at Locust Point here several weeks ago, when a damage estimated at \$5,000,000 was done. Mr. Smith came here a week ago to confer with the insurance men, the latter having raised the question that because of the long time the cars had remained here the insurance had lapsed and the company was no longer liable. This contention is of course combatted by the firm, which maintains that as there is no time limit in the policy it makes no difference whether the shipments were on the way one month or one year or two years, the insurance being for a continuous shipment until the lumber is laid down at the dock on the other side.

Mechanical Qualities of Wood

Bulletin 556 has been published by the Forest Service as a professional paper prepared at the Madison, Wis., laboratory. It was compiled and written by J. A. Newlin and Thomas R. C. Wilson, timber engineers, and is the result of tests which have been going on for years. The publication deals with scientific questions and the language is largely technical, but most of the terms are explained in a way to make them easily understood by the reader of average information along that line. Part of the information was contained in preceding publications by the Forest Service; but this bulletin brings it together and presents it with the latest revisions. The bulletin ought to be read and kept for reference by all persons who manufacture articles of wood. It deals with weight, hardness, strength, stiffness, shrinkage and other qualities; and figures are given for the same wood in both its green and dry condition, thus making comparison easy. For the purpose of illustration, the weights of a few well known woods, both green and air-dry, are quoted from the bulletin in pounds per cubic foot as follows:

	Green	Dry		Green	Dry
White ash.....	51	40	Red oak.....	64	44
Basswood.....	41	26	White oak.....	62	48
Beech.....	55	44	Yellow poplar.....	38	27
Yellow birch.....	58	44	Sycamore.....	52	34
Cottonwood.....	49	28	Black walnut.....	58	37
White elm.....	52	35	Hemlock.....	48	28
Tupelo.....	56	34	Longleaf pine.....	52	42
Red gum.....	50	34	White pine.....	39	27
Shag bark.....	64	53	Red spruce.....	34	28
Sugar maple.....	56	43			

A Valuable Food Tree

The carob tree of the Mediterranean countries supplies much provender for horses, cattle, sheep and goats, and also human food. It closely resembles the honey locust tree of the United States, and its beans and pods are the edible crop. It is claimed this was what John the Baptist ate with honey. It was the "locusts"—not insects as some suppose. It is claimed also that this was the lotus which Homer says caused those who ate it to forget all they had ever known. Carved carob wood 4,000 years old is in existence. A recent consular report published by the government gives an account of this tree's food value. Our honey locust should be as valuable.

Hardwood News Notes

CHICAGO

A. C. Quixley, head of the Quixley & Bulgrin Lumber Company, city, announces a change in style to the Quixley Lumber Company. The business will be continued as heretofore by Mr. Quixley, with offices in the Fisher building.

The Nashville Hardwood Flooring Company, manufacturer of the "Acorn Brand" of oak and beech flooring at Nashville, Tenn., with branch

office and warehouse in Chicago headed by E. Bartholomew as manager, is generously remembering its trade right now with attractive and useful little "Don't forget" memo pads between leather covers.

HARDWOOD RECORD is in receipt of a patriotically designed "season's greetings" card from E. C. Atkins & Co., Inc., Indianapolis, Ind., the sentiment being the same as incorporated in its advertisement appearing in this issue of HARDWOOD RECORD.

L. D. Gotshall of the Gotshall Manufacturing Company, Toledo, O., visited the trade the latter part of last week.

The South Side Stair Company, city, has filed an involuntary petition in bankruptcy.

John A. Colby & Sons, Inc., city, have increased their capital stock from \$150,000 to \$250,000.

◀ BUFFALO ▶

A big falling off in the number and costs of building permits occurred in Buffalo during November. The number of permits was 254, with costs of \$504,000, as compared with 507 permits and \$1,042,000 in November, 1916. The lack of house building has increased the demand for small houses and flats, and these have become so scarce that rents have had an advance. In the long run something will have to be done in the building line to accommodate the increased number of workers in local industrial plants, some of which are rushed with orders and employing the largest numbers in their history.

One of the reasons why nobody has ventured to build a canal fleet for the enlarged waterway between Buffalo and the Hudson is that it is hard to say what it is best to make it of. To build of steel, as was the original idea, would be to wait six months or more for the material, and so the new fleets may be made of wood, as the old ones were. A leading canal forwarder said recently that he did not believe much in steel boats for going through the canal locks. They were too unyielding, where a wooden hull will give enough to avoid many accidents.

The supreme court of the District of Columbia has handed down a decision affirming its jurisdiction in the case of G. S. VanGorder, the Peoples Bank of Buffalo, the Assets Realization Company and others against several Washington men who are directors of the East Lake Lumber Company. It is claimed that the directors appropriated about \$200,000 of the company's money. The case will go on trial soon at Washington, in spite of the efforts of the defendants to have the jurisdiction changed.

Shortage of fuel is hampering the operations of many woodworking and other plants in this territory and the outlook for the winter is very uncertain. Buffalo industrial concerns in some instances burn gas, which is in short supply. A. J. Elias is a member of a local committee canvassing the gas situation.

◀ PITTSBURGH ▶

The E. T. Lippert Saw Company of Millville, Pa., is planning to build a big addition to its plants.

The Pennsylvania State Forestry Commission is arranging to survey 15,000 acres more of forest land on the western watershed, most of it in Bedford county, Pa.

Building operations in Pittsburgh last month made a total of \$2,543,918. This was a gain of \$790,000 over November, 1916, and \$103,000 over October, 1917.

The Holgate Brothers Company, Kane, Pa., which has a big wood-turning plant in that city, has let the contract for an addition to cost \$18,000. W. H. Davis is general manager.

E. V. Granden, a well-known lumberman of western Pennsylvania, died at his home in Washington, Pa., December 3.

President A. Rex Flinn of the Duquesne Lumber Company is now a captain of artillery in the United States Army and has been assigned to Camp Lee, at Petersburg, Va.

The American Lumber & Manufacturing Company has secured the contract for 2,400 feet of oak shipped timber, fir and yellow pine which must be delivered at Portsmouth, N. H., by January 1, 1918. President W. D. Johnston is out West now superintending shipping of this mammoth order.

◀ BOSTON ▶

The annual meeting of the Massachusetts Forestry Association will be held at Boston on December 13, the principal feature of the program being a discourse by Dr. J. G. Sanders, economic zoologist for the state of Pennsylvania. He will speak on the conservation of our forests and food resources through the prohibition of importation of plant materials.

The third annual meeting of the Massachusetts Wholesale Lumber Association, Inc., will be held at Youngs hotel, Boston, on December 12. The preparation of a calendar of routine and special business is now being arranged by the officers.

The Eastern Lumber Company of Boston is reported as having liquidated and retired from business.

◀ BALTIMORE ▶

Information has been received from Washington to the effect that the demands of the military forces of the United States in the way of food and other supplies, together with those of the Allies, will create an enormous inquiry for boxes and box shooks, and that not less than 17,000,000 feet of lumber will be needed by the United States government

alone for cartridge boxes and other munitions and supplies. To this end the government is in the market for gum, birch, poplar, and various other kinds of low-grade stocks, which have heretofore been under pressure. The inquiry should give the whole list a very decided lift.

The American Propeller & Manufacturing Company, maker of aeroplane propellers in this city, has been elected a member of the Baltimore Lumber Exchange.

A recent caller here was Mr. Anderson of the Domestic and Export Lumber Company of New York, who was trying to get steamer space for three carloads of export lumber, which have been delayed for an indefinite period. The three cars are not among the 57 owned by members of the National Lumber Exporters' Association, which the British government agreed to have go forward. It is said that the prospects for an increase in the exports are very encouraging, considerable more space on steamers being regarded as in sight.

John L. Alcock & Co., located at Baltimore and Gay streets for years after the fire of 1904, have moved to the fifteenth floor of the Munsey building.

◀ COLUMBUS ▶

Building operations in Columbus in November were not so active as in November, 1916, but on the whole the records are fairly good considering the hindrances of present conditions, especially transportation facilities. Last month 158 permits with a valuation of \$273,385 were issued, as compared with 217 permits and a valuation of \$554,965 for November, 1916.

Findlay M. Torrence, secretary of the Ohio Association of Retail Lumber Dealers, announces that the annual convention to be held in Columbus, January 24-26, will be at the New Southern hotel. The business sessions will be held at Memorial Hall. At the same time the annual meeting of the Union Association of Lumber, Door and Sash Salesmen will be held in Columbus, with headquarters at the same hotel. It is expected that fully 1,500 delegates will attend the convention.

Robert J. Hough, formerly a traveling salesman for the W. M. Ritter Lumber Company, has been commissioned a captain in infantry after a course in intensive training at Ft. Benjamin Harrison, Indianapolis.

The Liberty Lumber Company, Columbus, has been incorporated with a capital of \$25,000 to deal in hardwoods and yellow pine in a wholesale way. The incorporators are E. R. Clarridge, R. E. Smith, W. L. Pierce, F. R. Rodgers and Golda K. Baker. The offices are located at 601 and 602 Joyce Realty building.

The Brasher Lumber Company, recently incorporated with a capital of \$150,000 to take over the business formerly conducted under the name of the H. D. Brasher Lumber Company, has been organized by the election of H. D. Brasher, president; E. G. Dillow, vice-president, and H. B. Walker, secretary and treasurer. The company has taken over a long leaf mill at Glendon, Ala. In addition it conducts a jobbing business with headquarters in Columbus.

Papers have been filed with the secretary of state increasing the authorized capital of the North Columbus Lumber Company, Columbus, from \$25,000 to \$75,000.

The Consolidated Lumber & Timber Company, Cleveland, has been organized with a capitalization of \$2,000,000 to take over the holdings of the Buehner interests at North Bend, Ore. J. A. Slattery, E. J. Maskee and S. Larson are stockholders.

At Marietta the Central Manufacturing & Lumber Company has been succeeded by the Citizens Lumber Company, with headquarters at Parkersburg, W. Va.

A new lumber company for Cleveland has just been organized by Milton S. Steward and Oren Monroe. It will be known as the Stewart-Monroe Lumber Company, and will cater especially to small housing work in the southern part of Cleveland. Headquarters and yards have been established at Broad View Road, South Brooklyn.

R. W. Horton of the W. M. Ritter Lumber Company reports a better demand from retailers, as dealers' stocks are getting low. A large majority of the orders call for immediate shipment. Considerable buying is also being done by factories, especially those making boxes, furniture and implements. Shipments are slow because of embargoes and railroad congestion.

The National Army Cantonment at Chillicothe is now as nearly completed as it ever will be and a large force of the workmen has been relieved.

◀ INDIANAPOLIS ▶

H. C. Atkins of E. C. Atkins & Co. has been appointed on a committee of business men to assist in solving the fuel problems that are confronting the Indianapolis public. The committee also will conduct an investigation to ascertain what would be a fair retail price for coal. Mr. Atkins has been devoting much of his time lately to patriotic work. He was the campaign manager of one of the leading teams which recently collected funds for the U. M. C. A. war work.

The Hardwood Lumber Company of Wabash, Ind., has dissolved as a corporation.

The Booth Furniture Company of Indianapolis has increased its capitalization from \$40,000 to \$150,000.

The Consumers' Lumber Company, South Bend, Ind., has been incorporated with a capitalization of \$10,000. The directors of the company

EVANSVILLE

O. Grimwood of Grimwood & Hinton has returned from a business trip. He reports that the lumber manufacturers of this section are having much trouble getting cars, and says that when they are not bothered by the car shortage they have to worry over the labor problem.

Mr. Hinton of the hardwood firm of Grimwood & Hinton has disposed of his interest in the Evansville Coffin Company and is now devoting all his time and attention to the lumber business.

Daniel A. Wertz of Maley & Wertz, hardwood lumber manufacturers, is back from a business trip in the northern part of the state and says that while trade is not booming manufacturers are holding their own very well. Mr. Wertz is making arrangements for the annual of the Indiana Hardwood Lumber Association, which will be held at Indianapolis in January of next year.

The John C. Smith Hoe & Tool Company, one of the best known concerns of its kind in the Central West, has embarked into a new business,

that of manufacturing cars for use in coal mines. The company had experienced a great deal of trouble in getting materials for hoes and other tools and decided to go into the other line of business. The concern is now busy and has no trouble in getting all the lumber it needs.

The plant of the Henderson Wagon Works at Henderson, Ky., has been closed down and will be offered for sale. The stock in the factory is owned largely by the banks and trust companies of Henderson, who were desirous of realizing on their stock, and it was decided for that reason to close down the plant and quit business. The company recently refused to accept a government order for \$300,000 worth of army wagons.

Newton McKim, living at Aurora, Ind., on the Ohio river several miles northeast of here, has had an old house torn down that was built more than one hundred years ago by the grandparents of his wife, and the walnut logs of which the house were built were sold. The logs were pronounced as good as new and brought a good price. The old house was known as the "Gray Gables," and was one of the landmarks of Dearborn county.

The Benham-White Company of Crothersville, Ind., with a capital stock of \$17,000, has filed articles of incorporation. The company will manufacture woodenware. Directors for the first year will be Clayde W. Keach, Harlan B. White and Alex W. Benham.

Thieves are said to be stealing thousands of dollars worth of walnut, beech and poplar trees in Brown county, Ind., a few miles north of here, and the authorities will make an investigation. Thousands of acres of timberlands in Brown county have never seen the ax and are many miles away from the nearest house and it is said the thieves have been working undisturbed day and night.

MEMPHIS

The Crenshaw-Gary Lumber Company, which has its headquarters at Memphis and its mill at Richey, Miss., announces that it has already received one of the new barges it ordered some time ago and that it will use this for handling logs to its plants, as well as lumber therefrom, as soon as the water in Sunflower river is high enough to make this plan practicable. The barge has a capacity of 500,000 to 600,000 feet. Furthermore, the company has ordered several more of these barges and they will be put into service as soon as they are delivered, provided the water is high enough for this purpose. This company has been able for more than a year to operate only one of its mills because of the poor transportation service furnished by the Southern Railway in Mississippi, but it believes that its transportation problem is in a fair way of being solved through these barges. Sunflower river empties into the Mississippi at Vicksburg and lumber will be handled south on that stream to the Mississippi and thence to such destination as can be reached thereby.

J. F. McIntyre & Sons, Inc., Pine Bluff, Ark., have traded all of the hickory timber, 8,000,000 feet, on their 12,000 acres of hardwood property near that point to the Archibald Wheel Company for all the hardwood timber, except hickory, on the several thousand acres of timberlands owned by the latter. It is estimated that there are 4,000,000 feet of hickory on the latter tract which still belongs to the Archibald Wheel Company, thus giving it control of 12,000,000 feet of this material. J. F. McIntyre & Sons, Inc., have entered into an agreement with the Archibald company to saw all this hickory timber, all the logging to be done by the latter. This is perhaps the largest hickory transaction ever put through in this part of the country, and the negotiations have been materially hastened by the big demand for hickory from the government and from the builders of automobiles. It is reported that the government is in the market for 180,000,000 feet of hickory, and this one transaction involves one-fifteenth of that amount.

Brown & Hackney, Inc., with headquarters in Memphis, have purchased from the Tensas Land & Lumber Company, near Transylvania, East Carroll Parish, La., 6,000 acres of hardwood timberlands and a single band mill with daily capacity of 35,000 to 40,000 feet. The new owners have already taken charge of the property and are preparing to begin operations as soon as possible. They have cut out their timber holdings at Mounds, Ark., where they have operated for some years, and they are removing all of their logging and other equipment to Transylvania, where they are building seven miles of standard gauged road. The timber consists principally of cottonwood, gum, cypress and oak. Announcement of the purchase and of the plans of the firm has just been made by Mark H. Brown.

C. E. Van Camp, acting secretary of the Gum Lumber Manufacturers' Association, is at Grand Rapids, Mich., where he is looking after the handsome exhibit of gum lumber being made at the Better Homes Exposition at that point. Mr. Van Camp is taking the place of Secretary Pritchard, who has been called to Washington to manage the Southern Hardwood Emergency Bureau for the period of the war. He is also replacing Mr. Pritchard in the capacity of listing officer for west Tennessee and eastern Arkansas for the Twentieth Engineers (Forest).

The Jorgensen-Bennett Manufacturing Company has completed two dry kilns built to replace those destroyed by fire some weeks ago. This firm is now able to operate at full capacity and take care of the requirements of its customers.

Among members of the lumber colony at Memphis who received commissions at the second officers' training camp at Fort Oglethorpe, Ga., are: D. E. Stanton, formerly assistant secretary of the American Oak Manufacturers' Association; H. H. Clark of the office force of Penrod, Jurden

& McEwen, Inc., and Richard J. Welsh of the Welsh Lumber Company. Each was awarded commission as second lieutenant. Memphis hardwood industry is now particularly well represented in officers.

◀ LOUISVILLE ▶

John Churchill, president of the Churchill-Milton Lumber Company, Greenwood, Miss., formerly of Louisville, passed through the city last week on his way back to Greenwood, having been at Baltimore, where he underwent a minor operation.

The Norman Lumber Company recently closed a good contract for its sawmill waste for a period of one year. This concern handles poplar, and between its planer and box shuck plant annually handles many cars of good waste, which can be utilized in paper making.

A voluntary petition in bankruptcy has been filed by the New Albany, Ind., woodworking house of Peter Jacobson & Sons, listing liabilities of \$40,000 and assets of \$26,760.45. This concern was moved to New Albany from Louisville about six years ago, after its plant was burned. Last March it suffered severely in the tornado which did so much damage in New Albany, and efforts to get started again were in vain. Peter, Era and Clarence J. Jacobson and Myrtle Marzian are the petitioners.

The War Department has awarded a contract to the Alfred Struck Company of Louisville for all repairs, improvements, enlargements, etc., to be made at Camp Taylor, which was recently completed by Mason & Hanger, who had the general contract. The Struck company also has a government contract at Jeffersonville, Ind., where it is building a new addition of several acres of buildings to the quartermaster's depot.

A number of Louisville men have recently received commissions in the army, graduating from the second Officers' Reserve Camp, at Ft. Benjamin Harrison, Indianapolis. Six men went up to this camp from the office of C. C. Mengel & Bro. Company, all of whom were commissioned first or second lieutenants. The list included E. B. Ford, Ferd Graham, E. C. Kornfeld, Sam C. Mengel, Culver Vaughn and William M. Johnson. Ross Kirwan of Kirwan Brothers, Louisville mill operators, has been commissioned a first lieutenant in the regular army. His brother, Edward E. Kirwan, was commissioned a first lieutenant some months ago, graduating from the first camp as an officer in the Officer's Reserve. Walter Cumcock of the Roth Lumber Company, a relative of W. R. Willett of the W. R. Willett Lumber Company, was commissioned a lieutenant. Marc Wymond of the Chess & Wymond Company, obtained a first lieutenant's berth, while Will Wymond of the Holly Ridge Lumber Company, has been appointed to the aero squadron. A number of men connected with the woodworking and allied trades have received commissions.

In order to obtain a bond issue of \$100,000 to provide for extensions, improvements and additional working capital, the Hoosier Panel Company of New Albany has placed a mortgage covering its plant with the German-American Bank & Trust Company, which has arranged the floating of the bonds. These bonds bear 6 per cent, and will mature in lots of \$3,000 the first half and \$3,500 the last half of each year until 1932.

In order to take care of increased business and generally larger operations, the Embury Box Company has filed amended articles of incorporation, increasing its capital stock from \$150,000 to \$200,000.

George Henry, seventy-three years old, vice-president of the Alfred Struck Company, died on November 25, following a short illness. Mr. Henry had been with the company for thirty-four years. He is survived by his wife and a daughter.

A new brick building is being erected at the plant of the Wood-Mosaic Company, New Albany, to house a big hog that is being installed to grind up wood waste for use under the boilers. Numerous big lumber mills are now paying more attention to wood waste, which is worth considerable with coal at present high prices.

The car shortage has been giving the Edward L. Davis Lumber Company some trouble, but the demand for ash has been extremely good, walnut, hickory, oak and other hardwoods being active also. With a fair car supply, however, business would be just about all that could be asked for, as the demand is greater than the supply just now.

Complaint has been filed before the Interstate Commerce Commission for the account of the W. P. Brown & Sons Lumber Company by the Louisville branch of the Southern Hardwood Traffic Association, naming the Chicago, Rock Island & Pacific and the Southern Railroad Company, and attacking a rate of 17½ cents from Brasfield, Ark., to Athens, Tenn., via Memphis, on lumber in car lots. A new rate of 16 cents is asked and reparation for overcharges.

After meeting each Tuesday evening over a period of ten years the Louisville Hardwood Club is now meeting only on the first and third Tuesdays of each month. This matter was brought up at the annual meeting in November, and was later voted upon. The organization at its last November meeting changed its constitution and bylaws in order to hold the meetings twice a month, and also changed to admit non-resident members, who have representatives in Louisville. The principal matter of interest was an address by Mr. Stubbs, Canadian representative of the Card Lumber Company of Chattanooga, Tenn., who discussed lumber conditions as they exist in Canada. Mr. Stubbs stated that business was much better than it has been. However, in order to avoid traffic troubles the company has shipped large stocks into Canada, and has them on storage to take care of the Canadian trade.

One of the largest shipments of soft building lumber by express on record out of Louisville was a two-car shipment made by the Alfred Struck

The MOWBRAY
& ROBINSON CO.
(INCORPORATED)
CINCINNATI, OHIO

All Three of Us Will Be Benefited if You Mention **HARDWOOD RECORD**

Company last week to Walls Brothers of Chicago, who are building the Winton hotel at Cleveland. This contract is a bonus arrangement, and the time is nearly up. A car of lumber shipped from Louisville on October 23 did not reach Cleveland until November 15, and the contractors are not taking further chances. The express charges to Cleveland are about \$400 to \$500 a car, as compared with \$150 by freight. However, on a bonus contract, working in favor of both contractor and owner, a day's difference on the wrong side means considerable.

The country in western Kentucky is being combed for hickory and white oak by the Forbes Manufacturing Company, wagon builder, who has a big government contract for wagons. About \$50,000 worth of hickory is required, big logs being used as well as small bolts for axles, singletrees, spokes, etc. The company is advertising in the papers in hopes of being able to get the farmers interested in turning loose of a bit of timber.

One of the largest and most attractive weddings of the season was that of Miss Elizabeth Booker, sister of Ned Booker and Bodley Booker of the Booker Box Company, to Capt. George Maynard Chescheir of the One Hundred and Thirty-eighth Field Artillery, held in Louisville last week. Following the ceremony the young couple went South, where they will occupy an army shack at Camp Shelby, Hattiesburg, Miss., where Capt. Chescheir is stationed.

About forty men have been released from the works of the Winchester Lumber & Manufacturing Company of Winchester, Ky., due to traffic conditions which have tied up things for the organization. At the present time embargoes prevent it from shipping its manufactured products into much of the East, where its principal business is handled, while at the same time it has been unable to secure cars in which to make shipments.

W. R. Willett, head of the W. R. Willett Lumber Company of Louisville has been kept hustling during the past few days in getting a big pine contract of about 2,000,000 feet of pine for government work at Jeffersonville, Ind., delivered, but has about cleaned up this work, and is again lending most of his attention to hardwood business.

◀ ARKANSAS ▶

As the result of the scarcity of railroad equipment, operations at a number of the veneer and hardwood manufacturing plants at Helena are now suspended, among which are included the Kurz-Downey Company, the Arkansas Veneer Company and the Theo. Fathauer Company of Arkansas. The car shortage situation has been acute for some time, but it has recently gotten to such a stage that some of the plants, as above stated, have found it advisable to suspend operations for a while at least. While the railroad officials exhibit a hopeful attitude, the plants are without sufficient raw materials to justify their operating, and many of them are finding it very difficult to secure sufficient cars in which to ship out the manufactured products made before the car shortage became so bad. It is not determinable just when these plants will again be able to proceed with their work.

Some of the Helena industrial plant owners are feeling some elation over what they consider a signal victory for the lumbermen of that place, in the recent announcement by the railroad officials that the order issued some time ago forbidding the use of equipment of any character for cross-town switching has been withdrawn, and that the old arrangements will now be put into operation again. Several industries of that place are entirely dependent upon custom mills for their products, and in a number of cases this business is necessarily handled by cross-town switching, or between Helena and West Helena, a distance of some seven miles.

The restoration of the old order of things is due to the efforts of the Southern Hardwood Traffic Association, which had charge of and handled the question of the discontinuance of this class of service for its members at that point.

Practically all of the plants manufacturing boxes, barrels and screen doors are now employing many women, and even the regular lumber manufacturing plants, both hardwood and yellow pine, are finding women suitable for certain kinds of the lighter work.

Most of the manufacturing plants of the state have shortened the hours of labor, and increased the scale of wages for labor. The average is perhaps 20 or 25 per cent over what it was a year ago. But even this added inducement fails to bring out all the needed laborers, probably due to the fact that they are simply not to be had. While some of the larger manufacturers say they are getting along in fair shape, most of them admit that they are having considerable difficulty in securing all the help they need.

The Frisco Stave Company of Jonesboro has filed articles of incorporation with the secretary of state and is now operating as an Arkansas corporation. Its capital stock is \$15,000. R. L. Smith, H. L. McNieve and W. W. Case are the incorporators.

A. J. Welsinger is preparing to erect a plant at Lake Village, Ark., for the purpose of manufacturing sawed staves.

The Delta Mill Work Manufacturing Company of Dermott, Ark., and the Mohawk Lumber Company of Magnolia, Ark., have recently surrendered their charters.

◀ WISCONSIN ▶

The Northern Casket Company, Fond du Lac, Wis., with branch plants at Sioux City, Ia., and Denver, Col., is establishing new departments for the production of all-metal coffins on a commercial scale. The output of hardwood caskets will not be diminished.

The Shawano Lumber Company, Shawano, Wis., has increased its capital stock from \$75,000 to \$150,000. E. H. Steiger is president.

The Dollar Bay Lumber Company, Dollar Bay, Mich., shut down its mill for the season, after sawing about 5,000,000 feet. Woods operations are being conducted on a scale indicating a similar cut during the coming season.

The Kiel Woodenware Company, Kiel, Wis., which is building a one-story factory addition, 80x320 feet, and enlarging its power plant, is in the market for a 250-kilowatt generator set and new motors ranging from 5 to 50 horsepower.

The Gustave Kaye woodworking plant at Grand Rapids, Wis., had a \$2,500 loss by fire on November 22.

The Globe Shipbuilding Company, Superior, Wis., is being enlarged by the addition of an area of 400x1,500 feet, which is being equipped with three electric traveling cranes.

The Henshaw-Worden Lumber Company, Antigo, Wis., has been incorporated with a capital stock of \$100,000 to take over saw and planing mills and a large part of the timber holdings of the Kingsbury & Henshaw Lumber Company, Antigo. C. E. Henshaw, J. H. Worden and A. B. Goodrick are the organizers of the new company. John J. Kingsbury, senior member of the Kingsbury-Henshaw concern, died several months ago. The Henshaw-Worden interests have purchased the steam creeper-tractor, sleighs and other equipment of the Kellogg Lumber Company.

F. J. O'Neill has been appointed general manager of the Shawano Lumber Company, Shawano, Wis. Mr. Rinehard will continue as superintendent of the mill.

The Waukesha Manufacturing Company, Waukesha, Wis., established many years ago by Madden Bros., has been purchased by Harry L. and Harlow H. Ferris, Waukesha, who will continue the manufacture of packing boxes, livestock crates, sash and door, etc.

The Northern Wood Products Company, Glidden, Wis., is erecting a factory addition and installing considerable new equipment. W. A. Thomas is president.

The Dempsey Lumber Company, Tacoma, Wash., with a branch at Racine, Wis., has been chartered in this state. The capital stock is \$500,000 and the Wisconsin interest is stated to be \$36,000.

The Marinette & Menominee Box Company, Marinette, Wis., which recently purchased the plant and business of the Peninsular Box & Lumber Company, Menominee, Mich., is transferring the machinery and equipment to Marinette, where it is being installed in the former sawmill building, which has been doubled in size and connected with the main factory. A new sawmill was erected about a year ago. The Peninsular company was established in 1896. Harry L. Haslanger is general manager of the combined concerns.

The N. Ludington Company, Marinette, Wis., which opened its sawmill in 1858, and has been sawing almost continuously since that time, sawed its last pine log late in November. From this time on the mill will be operated with logs brought by rail, and the cut will be mixed timber, with a large percentage of hardwoods. The Ludington Company is owned principally by the Hon. Isaac Stephenson, Marinette, former United States Senator from Wisconsin, who was active in its management for the last sixty years.

The Appleton Hay Tool Company, Appleton, Wis., a large manufacturer of car-moving devices, has purchased a large tract of hard maple timber in northern Wisconsin to insure its plant an adequate supply of bolts for handles for the car-movers. The company is 2,000 devices behind on its orders, many of which come from England and France. Heretofore its entire supply was furnished under contract by an Oshkosh handle plant, but this is insufficient. Handles for car-movers for France are one-third longer than those for other countries because of the smaller car wheels used by French railroads.

Lumber manufacturers of Wausau, Wis., are overcoming the acute shortage of cars, which has interfered seriously with supplying mills with logs, by putting large stocks of logs on rollways along the sidings at their camps, instead of attempting to ship large quantities at once. Logs will be kept on the rollways until they are needed at the mills. Heretofore logging camps were not equipped with an adequate number of landings, and the result was that more than twice the number of logs needed each day were shipped to the mills during the winter, when cars are scarce, instead of distributing the shipments more equally over the spring and summer periods, when cars are in more liberal supply. By means of a judicious handling of logs, mills at Wausau expect to be able to maintain their cut at least at normal during the coming year, and logging operations have been planned accordingly.

The labor situation shows considerable improvement and logging operations consequently will be of larger volume than earlier anticipated. The higher scale of wages which is now being paid has produced a more adequate and steadier supply of men for woods work. However, the situation still is not entirely favorable and many hundreds of men are wanted in the northern hardwood belt.

F. C. Barlow, who left the position of superintendent of the sawmill department of the Phoenix Manufacturing Company, Eau Claire, Wis., to enlist in the Tenth Engineers (Forest) Regiment, which is now in France, has written a letter home in which he speaks of having been assigned to act as mail censor, but that he expected at the time, which was October 30, to be engaged in supervising the work of two companies of forestry en-

gineers. Mr. Barlow received a commission as captain of forestry engineers, but until the regiment was ready for actual duty as indicated by its title, he and other officers were set at other necessary tasks somewhat out of their line.

The wholesale lumbermen of Superior, Wis., and Duluth, Minn., the Twin Ports at the Head-of-the-Lakes, were the guests of the retailers of the two cities on November 21 at a banquet in the Hotel Superior. Last summer the wholesalers defeated the retailers in a thrilling baseball game, the stake being dinner. Advantage was taken of the occasion to talk over business conditions. It was stated that although it appeared from the building reports of the United States that the demand for lumber of all kinds for construction purposes shows a falling off, the fact is that business has been very good and much better than in some past years, due to the heavy absorption of lumber by the government and those furnishing the government with materials, supplies and other goods.

The Upper Peninsula Loggers' Association was organized at a meeting of representatives of twenty-five logging and lumbering operators in northern Michigan, held November 30 at Houghton, Mich. The organization is similar in nature and scope to that recently formed in Wisconsin and other states at the suggestion of the Council of National Defense and the Food Administration. L. G. Hillyer of the Baraga Lumber Company, Baraga, Mich., was elected president and J. H. Bice of the Greenwood Lumber Company, Ontonagon, Mich., secretary and treasurer. Numerous lumber companies of northern Wisconsin which operate logging camps in the peninsula are members of the new association.

W. A. Holt of the Holt Lumber Company, Oconto, Wis., was elected president of the Northeastern Wisconsin & Upper Peninsula Loggers' Association, which was organized at a meeting held in Green Bay, Wis., on November 16. Albert Klass, Oconto, was elected secretary and treasurer.

C. J. LeSure, founder of the LeSure Lumber Company, Sellwood building, Duluth, Minn., who retired from its active management three years ago, died from heart failure after an illness of two days, at the age of sixty-six years. He was born in Genesee, Wis., on April 10, 1851, and located in Duluth in 1894, in which year he financed and supervised the construction of the LeSure sawmill on Grassy Point, one of the largest mills of the day and still an important producer.

Edwin R. Radford, a leading timber and lumber operator of Menominee, Mich., died at a sanitarium at Battle Creek, Mich., on November 28, aged sixty-seven years. Mr. Radford for many years was vice-president and general superintendent of the Wisconsin Land & Lumber Company, Hermansville, Mich. He was for twenty-four years chairman of the Menominee county board of supervisors and held many other offices of public trust.

J. H. Reiser, Milwaukee, traveling representative of the Wausau Lumber Company, Yawkey-Bissell Lumber Company and Marathon Lumber Company, Wausau, Wis., has received word from his son, Raymond, who enlisted in the United States Navy when war first was declared upon Germany, that he now is a yeoman on board the United States supply ship Kanawha. Mr. Reiser received a postal card message from his son at Halifax upon his return from the first trip to France.

The Hardwood Market

< CHICAGO >

The trade continues quiet in Chicago, inventory taking having its usual further effect in addition to results from other causes. Local lumbermen are laying their plans so as to be prepared in case certain of the industries appearing on the list of 500 unnecessary articles be limited in their manufacture or eliminated entirely from their usual production. Some lumber is moving into Chicago, part for reshipment and a large quantity for use in different factories which are operating on commodities and materials having to do with the war. But the building situation and its prospects remain unchanged insofar as betterment is concerned.

The local trade dependent upon outside mills for its supply of lumber is finding great difficulty in filling orders on books on account of car and labor troubles at the mills. In fact, many lumbermen are concentrating today on the question of getting shipments rather than soliciting new business, and while results are not entirely satisfying, personal attention to this feature is helping the movement somewhat. Some lumber is being offered at reduced prices, but on the whole the difficulty in securing stocks is maintaining the markets in firm shape.

< BUFFALO >

Lumbermen generally are much disturbed about the rumors that the trade is to be held up on account of decisions that their shipments in general lines are not needed. Lumber shippers with a supply on hand are stiffening their prices on that account, while furniture and implement factories are afraid to buy lest they find themselves unable to ship their product after it is manufactured. This uncertainty bids fair to continue indefinitely.

The report that the government has asked for 13,000,000 feet of heavy

oak for war uses, supposed to be for cannon carriages, has increased activity and tended to stiffen prices. Buffalo has quite an amount of that lumber, but some dealers think that prices will be higher next year than now and do not care to dispose of their stock too rapidly. Oak continues to be about the best wood in demand, though maple is wanted to a large extent.

The hardwood demand is fairly large in industrial plants which are filling war orders. Business at most yards is about as good as a month ago, though there has been a falling off in the inquiry from furniture factories and from the building trade. These two lines are not expected to do much during the remainder of the year, though a revival in trade is looked for next spring. Car scarcity threatens to become worse, while numerous embargoes are in effect upon the rail lines.

Receipts of lumber by lake during the past month were about 3,500,000 feet, bringing the total for the season up to approximately 46,000,000 feet. Vessels have been scarce and freights abnormally high, so that receipts have been less than usual.

◀ PITTSBURGH ▶

Hardwood men are chiefly worried by the difficulties in getting shipments and not by the lack of business. Orders are coming along in a very fair way considering the lateness of the season, and business would not be at all bad if deliveries could be made in anything like good time. The railroad situation is worse this week than ever before. There is little or no hope of any improvement in shipping conditions for the lumbermen this winter. As a result, wholesalers are very careful about the kind of business they take on. Trade with the manufacturing and mining concerns is good. Those plants which have war orders are buying a lot of hardwood lumber. Mixed hardwoods to the mining trade are good sellers. More inquiries have also come of late from the retailers, as their stocks were getting very badly broken.

◀ BOSTON ▶

The hardwood trade of this district is becoming a sharply defined industry, divided into government and non-governmental classes, the former characterized by heavy demands, high prices and favorable transportation facilities, and the latter surrounded by practically insurmountable obstacles. There is comparatively little interest in the values of stock for domestic consumption, the normal influences on price being of no operative effect. The manufacturing customers for this class of material express serious doubts as to their ability to continue producing much longer or to deliver goods they are completing whether contracted for or not. The finish and building men being almost out of the market, it is a question with the dealers in general hardwoods what possible opportunity there is for them to operate with safety in any reasonable volume, unless they have the capacity to enter the market with stock directly or indirectly demanded for war requirements. For such of that business as can be handled, which is relatively smaller in a commercial than in a producing section, the problem is reduced to substantially that of getting the lumber on the cars and getting price enough to cover the extraordinary costs. The situation of dealers working in either class of trade is uncertain and productive of much concern of what will happen when a change comes and how long can current conditions be sustained.

◀ BALTIMORE ▶

The volume of business in hardwoods keeps up well enough, even though most orders are for immediate delivery. Members never have much ahead and always seem to be just at the end of their activities. The freight embargoes on the railroads, of course, are worse than ever, keeping most of the members of the trade busy trying to straighten out transportation tangles. But in spite of all these drawbacks, new orders come in with sufficient freedom to bring the aggregate of transactions up to fairly impressive figures. Many of the dealers are using every endeavor to add to their holdings, foreseeing a scarcity of stocks or such serious impediments in the way of the distribution as to cause local famines; and they want to be in a position to take care of the wants of their customers. The mills, for their part, are hampered in their operations by the scarcity of labor, and they experience great trouble in getting railroad cars or permits to have these cars go forward. While the hardwood trade is less subject to the requirements of the government than yellow pine, the necessities of the box makers are forcing a general extension of the wood used in the manufacture of containers, and the recent announcement that some 17,000,000,000 feet of all kinds of lumber would be required to take care of the needs in this direction is certain to cause a tightness in the offerings of poplar, gum, birch, and other woods which have heretofore not been worked up into shooks. That this call will have a pronounced effect upon the value of the woods in question is hardly to be doubted, so that there is likely to be a further rise even in the higher grades, even though the ordinary activities in which these higher grades find use are being interfered with. There is also a prospect that the factories which turn out interior trim and which have not been rushed of late will be called upon for larger quantities of their product because of the house construction that is in prospect, the housing facilities being very far short of those required to take care of the thousands of workers

LUMBER AND MILL WORK

Elmira, N.Y.

November
 9th,
 1915.

Paepcke Leicht Lbr. Co.,
 Chicago,
 Ill.

Gentlemen:-

We are using your Red Gum lumber in the manufacture of our high class interior trim and general planing mill work.

This gum is giving excellent satisfaction, being highly graded, soft texture, good widths, and long lengths, also dry, straight and flat.

Respectfully,
 Harris, McHenry & Baker Co.

Dict.
 RKN/LG.

Of course it is true that

Red Gum

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

The inherently superior qualities of Red Gum can be brought out only by proper handling

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

Paepcke Leicht Lumber Company

CONWAY BUILDING 111 W. WASHINGTON ST.
 CHICAGO, ILL.

Band Mills: Helena and Blytheville, Ark.; Greenville, Miss.

attracted by the new enterprises at different points. Altogether the outlook for a good demand for hardwoods is promising, and while for the time being a slowing down may have taken place, the increased requirements are bound to make themselves felt. The indications also are that exports will be augmented, the stocks held abroad having been reduced to very small proportions.

◀ COLUMBUS ▶

The hardwood market in central Ohio territory has been quite firm and active during the past fortnight. Buying is better, and while shipping facilities are still restricted, a larger amount of lumber is coming into the local market. On the whole the tone is better and prospects are higher.

Manufacturing establishments are in the market for stocks, and quite a few orders have been received from furniture, box and implement factories. Factories are buying mostly for the present and are not inclined to accumulate stocks to any extent.

The retail trade is improving and there is a distinct movement to stock up for expected winter demand. Building operations are slightly better and generally speaking there is a better feeling in building and contracting circles. Stocks are considerably broken and hurry orders have been made to replace them. Prices are firm at the levels which have prevailed for the past month. Several advances have been recorded. This is especially true of chestnut and poplar. Collections are usually good.

Plain and quartered oak, ash, and basswood are in good demand and prices practically are unchanged. Poplar is moving well, especially the lower grades. Other hardwoods are unchanged.

◀ INDIANAPOLIS ▶

Hardwood manufacturers in central Indiana report a continued improvement in demand, which is attributed to an increasing number of war orders calling for hardwoods. The customary channels of business are not producing the demand that was expected, but this loss of business is being made up by the orders of other plants, which in many cases have been only small consumers in the past. The furniture industries, however, present a brighter outlook as stocks on hand are becoming small, and these manufacturers are showing increased interest in the market. The demand for box making materials continues to improve.

Ash, hickory, oak, and walnut are in the heaviest demand. Prices are steady, but tend upward. The car shortage gives the trade much difficulty, and operating problems are increasing. In many localities operation has been hampered by a lack of fuel. Labor is scarce, especially in small manufacturing centers.

Very little activity exists in building. Building operations last month amounted to only \$400,200, a loss of \$320,876, compared with the values for the corresponding period of last year. Building operations for the first eleven months of the year are valued at \$7,017,159, compared with \$8,407,030 for the corresponding period of 1916.

◀ CLEVELAND ▶

Slump in building operations, due to the advent of colder weather, has not affected the position of hardwoods in this market, with one exception. That is oak flooring which is about \$2 per thousand lower than a fortnight ago. This slight reduction, however, is due only to the fact that this wood is a little more plentiful than others. Other descriptions continue firm. Offerings in yards and by dealers are decidedly limited because of the car shortage. Maple flooring is in good demand, although values are no higher than formerly. Principal business for these woods is in factory and other industrial construction work. For this much cypress is being used, and the absence of keen inquiry for this material in small house construction offsets the outlet in industrial channels and keeps quotations steady.

◀ EVANSVILLE ▶

Trade with the hardwood manufacturers of southwestern Indiana is reported fairly good in some lines, while in others it is inclined to drag. Lumber that is being used in the making of war materials is in brisk demand, but that for regular routine trade is not so active. Logs are coming in slowly owing to the inability of manufacturers to get flat cars. The up town mills in Evansville are being operated steadily, but some of the large mills will be forced to close down soon unless the log situation improves. The labor shortage is worrying some of the manufacturers.

Quartered white oak has been off for some time, while plain white oak is good. Plain red oak is in good demand, but the call for quartered stock is light. Cottonwood is moving fairly well. The box factories are working on war orders and it is expected that cottonwood will be in good demand for some time. Elm and maple are only fair, while gum is off. Hickory and the best grades of walnut are in strong demand and ash is moving well. The poorer grades of walnut are in slight demand. Collections are fair. The general trade outlook is not bad and manufacturers believe that the new year will start off all right. Building operations are slow and no improvement is looked for until early next spring. Sash and door men and planing mill owners say trade is nothing to brag about now. Many of the large wood consuming factories in Evansville are being operated on time. Plow factories are especially busy.

Easiest Handling

buy the

Hoosier Self Feed Rip Saw. This machine has earned thousands of dollars for owners in the manufacture of dimension lumber, crating, etc., because its entirely novel design, resulting in surprising ease of operation and adaptability, makes possible a profit where a loss is often expected in this work. The

Hoosier Self-Feed Rip Saw

has a positive and powerful feed which handles the heaviest material the sawmill takes just as readily as the lightest.

The table, raised and lowered with the crank in front of the machine, is always level—always securely locked.

The Hoosier rips anything up to 6 inches thick and 17 inches wide. It feeds 35, 75, 100 or 150 feet a minute.

Manufactured exclusively by

The SINKER-DAVIS COMPANY
INDIANAPOLIS, INDIANA

This "HOOSIER," the rip saw which makes profitable dimension manufacture and grade refining at the mill possible. Hundreds of users already—you will be another if you will let us tell you all about it—Will you?

← MEMPHIS →

The hardwood market displays an excellent tone, for which there are two good reasons furnished by hardwood lumber manufacturers. One is the curtailment of output forced by the failure of the carriers to furnish the necessary cars to keep the mills supplied with logs and the other is the increasing demand for southern hardwoods. The supply is thus cut, to some extent at least, at both ends, and this process is taking place at a time when stocks are admittedly considerably below normal. Advances have recently occurred in some items and still higher prices, in the opinion of prominent members of the trade, would be a perfectly logical development on the basis of the foregoing premises and of other conditions obtaining at present.

Box manufacturers are doing the largest business in their history and are absorbing all the low-grade cottonwood and gum they can find. It is suggested that, with the general curtailment of hardwood output, which must necessarily involve both cottonwood and gum, the box manufacturers will not be able to secure enough low-grade stock to meet their requirements and that they may find it necessary to use the entire cut of gum logs in their plants. It is pointed out that prices on low-grade cottonwood and gum are rapidly reaching the level where it would require only a limited amount of further improvement in prices to make it possible to use every grade of lumber manufactured from gum logs in box factories. And this view is gaining ground for the reason that there is nothing like the demand there has been heretofore for the higher grades of red and sap gum from the furniture trade, from manufacturers of interior trim and from other sources, a condition which necessitates finding a ready outlet for these comparatively dull items. The higher grades of cottonwood, too, are in less active demand than the lower and this may mean the use of rather high grades of this material in the box factories.

High-grade quartered white oak is moving more freely than heretofore. This development has come as a surprise in view of the restrictions thrown around furniture and cabinet manufacturers and in view of the comparatively limited building operations in all parts of the country, but it is none the less welcome on this account. The excellent demand for thick plain oak stock running thicker than 4/4" has caused most manufacturers to saw the thick stock to the comparative neglect of the thin. As a result there is more inquiry reported for 4/4" oak in No. 1 common and better in proportion to the supply available. Ash is reported moving well in all grades and the demand for hickory is the largest ever experienced. Cypress is moving in good volume, but there is little doing in elm.

← LOUISVILLE →

The government demand for hardwoods continues to feature the local sale of hardwoods, and practically all of the local operators are being

kept busy on orders for use in some department of the navy or army. The demand for ash appears to be unlimited, and all grades are in big demand. Hickory and oak are probably the two next most active woods, while gum and poplar are moving fine. The demand for walnut is the greatest ever known, and mills are having trouble in getting enough logs to fill government requirements. Some of the small mills are now cutting and shipping walnut flitches to mills making gunstocks. As only the best grades are used in gunstocks there is much cheap dimension walnut on the market. Mahogany is active, and the mills are having no trouble in disposing of their output, while the aeroplane demand for walnut, mahogany and ash is fairly brisk. Low grade hardwoods are being kept well in line by the demand from the box manufacturers. Veneers and glued-up stocks have been fairly active all fall. However, embargoes are playing havoc with shipments into eastern sections, and the car shortage in the South is such that many mills have been forced to suspend operations while awaiting cars. Very few long contract orders are being taken, but immediate shipment orders are coming in so fast that there is no scarcity of business. Some of the people who in past years endeavored to place contract orders are holding back while awaiting the outcome of the proposed regulations relative to shipping non-essentials.

← MILWAUKEE →

Considering the period of the year, when business usually is rather quiet, the demand for hardwoods of all kinds at this time is reported to be good and for certain grades it is excellent. Prices are being firmly maintained and the tendency is upward, although it is hardly likely that any important changes in lists will be made until after the close of the year.

Reports from the northern Wisconsin hardwood districts indicate that logging and lumber operators are overcoming to a great extent the unfavorable conditions which earlier had been expected to affect the coming year's supply to a very material extent, commencing with a restricted output of logs because of the shortage of labor and unfavorable transportation conditions. While the car situation is steadily growing worse instead of better, the labor market is easier as the result of a general advance in the wage scale, which has not only increased the supply, but improved the quality of the men available for woods work.

A large percentage of hardwood lumber business, of course, is transacted directly on government account, and with concerns executing federal contracts, including material for airplanes, motor vehicles, trailers, and even furniture and fixtures for depots and other needs. Yet there is a fairly good demand from purely private sources, and this a source of much gratification to the hardwood industry. In general conditions are regarded as more favorable than they have been for some time past.

CLASSIFIED ADVERTISEMENTS

Advertisements will be inserted in this section at the following rates:

For one insertion.....25c a line
For two insertions.....40c a line
For three insertions.....55c a line
For four insertions.....65c a line

Eight words of ordinary length make one line. Heading counts as two lines. No display except the headings can be admitted.

Remittances to accompany the order. No extra charges for copies of paper containing the advertisement.

EMPLOYMENT WANTED

MANUFACTURERS-WHOLESALEERS-EMPLOYERS

when you want good Salesmen, write the Empire State Association of Lumber, Sash & Door Salesmen, J. H. RUMBOLD, Sec'y, North Tonawanda, N. Y.

MANAGER WITH BEST

of references from present and past employers desires to make a change. Eleven years' experience in lumbering, estimating, milling, mapping, river work, purchasing and office duties. Technical education as engineer and forester. Address "BOX 116," care HARDWOOD RECORD.

NORTHERN MANUFACTURERS**Ahnapee Veneer & Seating Co.**

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

We have the following for sale

1 car 5/4 FAS Unsel. Birch

35,000 ft. 6/4 No. 1 Com. & Btr. Unsel. Birch

Our stock is manufactured from a nice class of timber and therefore runs to nice grade and extra good widths and lengths.

We select your request for delivered prices

LARAGE KALAMAZOO BLAST GATES

OUR smaller sized Blast Gates are made to fit over the pipe in place of inside. This gives an absolutely unobstructed passage thru the pipe, decreasing the resistance, and at the same time obviating the danger of the pipe becoming clogged by reason of the material catching between the side of the pipe and flange of gate. The gain in area thru the straight way gate over that in the old style is from 10 per cent in 8-inch gate to about 50 per cent in 2-inch. It can readily be seen that this is a very decided advantage when there are many small branches.

From 2 inches to 8 inches

Larage S. W. Gate Old Style Gate

These Blast Gates are well made, with good, heavy sheet-steel slides—practically airtight. They are well adapted for blast pipes to forges, pipes to exhaust fans, hot-air piping and in fact anywhere where the pressure does not exceed three or four ounces.

LARAGE FAN COMPANY.

Michigan Hardwoods *Cadillac Quality*

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

DIMENSION STOCK Mahogany and Walnut

Aside from our production of lumber and veneers—We are manufacturing kiln-dried mahogany and walnut dimension stock at the rate of 2,000,000 feet annually, and this department has been steadily growing since 1902. We think that these simple facts make detailed argument unnecessary—as to our prices, quality of our stock, and promptness of service.

However, we have ready for mailing a circular which explains in detail how and why you can save time, money and trouble—through our dimension stock.

But if you don't care for the circular, and if you realize what an expensive luxury your waste pile is, send us your cutting bills, as you would give them to your stock-cutters. We will quote a specific price for each style you manufacture.

C. C. Mengel & Brother Co.

DUHLMEIER BROTHERS & CO., OHIO
Manufacturers, Cincinnati

Were all the Oak timber to be destroyed over night the effect on business in general would be chaotic.

The Band Mill, Planing Mill and Dry Kiln of the
Williams Lumber Company
is located at
Fayetteville, Tennessee

Why has Oak always led in offerings at the furniture shows? Ask anyone who sells furniture.

All lumber piled in same lengths and similarly loaded in cars
CLAY LUMBER COMPANY, W. VA.
Manufacturer, Middle Fork

A & C—
Manufacturers of Hardwood Lumber; also Millwork, Finish, Trim and Oak Flooring.
WEST VIRGINIA TIMBER CO., W. VA.
Charleston

Kentucky Soft Texture White Oak, Red Oak and Poplar. High-class, sound, square edged White Oak Timbers, 10x16 ft.
AMERICAN LBR. & MFG. CO., Pittsburgh, PA.
Manufacturer and Wholesaler

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.
The J. M. Logan Lumber Company, Knoxville, Tenn.
The Little River Lumber Company, Townsend, Tenn.
The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

OAK, POPLAR, MAPLE

Walnut, Chestnut, Hickory, Cedar, Ash, Basswood, Beech

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Value of Adequate Supplies of Furniture Woods

It was stated in a former summary, printed in this space, concerning the advantages possessed by the Memphis district as a source of supply for furniture woods, that one of the prime considerations is the ability of a market to fill repeat orders without changing the quality. The strong position occupied by Memphis in that respect was shown. To appreciate the full importance of this factor, it is necessary to refer to the extent of the demands made by furniture manufacturers in the United States.

The total purchases annually of woods of all kinds by furniture makers in the United States exceeds 944,000,000 feet, board measure. Only three industries of this country exceed that quantity of lumber. These are planing mill products, boxes and car construction. While furniture is made from most grades of hardwood, the percentage of best grades is high. Though interior parts may be of cheap woods, yet they are not selected haphazard. They must possess suitable seasoning qualities or the furniture maker does not want them. Of course, the higher grades must likewise possess the desired seasoning qualities along with their other qualities.

In this respect, the Southern hardwoods are in a class by themselves. Not only are they abundant, but their qualities are fully up to standard, and the manufacturer who has built up a furniture business on quality of wood can always feel assured that if the wood comes from the Memphis district, the quality will accompany every repeat order. That holds true not only of the high grades for exterior parts of furniture but holds as well for cheaper woods for the inside, hidden parts. Quality is as essential in the latter position as in the former.

(To be continued)

Crenshaw-Gary Lumber Co.

The Story of the Third Appalachian Logging Congress

Appears in LOGGING for
JANUARY 1918

instead of in December as previously
announced.

The change is due to the postpone-
ment of the meeting making it
impossible to hold the press long
enough to get the story in the Decem-
ber number.

LOGGING dons a new dress with this Jan-
uary 1918 number, climbing right into a class
with the most modern monthlies of general
appeal. Send for a sample copy FREE.

DULUTH, MINN., U. S. A.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

THE APPRECIATED GIFT

YOU send holiday remembrances to your trade to express appreciation of cordial business relations.

Isn't the expressiveness of such a gift dependent upon its character, its originality, its very **difference** which stamps it as a tangible token of your real desire to please?

Could that desire be more sincerely expressed than to make your gift have the form of something of definite value and exclusive usefulness?

Wouldn't it be wise for you to send a copy of

American Forest Trees

a strongly-bound, finely printed exposition of every commercial type of American forest growth?

Written by lumbermen for lumbermen (in the lumbermen's language) this book has, withal, been pronounced by the highest experts as totally above criticism as far as its accuracy and dependability are concerned.

Send your lists and we will check carefully to avoid duplication.

On more than one we have a sliding scale of price that is very attractive.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Review and Outlook

General Market Conditions

THE LEAF IS ABOUT TO BE TURNED. What will be written on the blank page to follow is of concern to all of us, but cannot be foreseen by any of us. We know what the past has been. We know what the development is today, and we know about what would happen should the present course hold for another year.

The next twelve months hold promise of one of two things: Either that the present attrition will continue, necessitating our applying ourselves more and more closely to the one problem of war development, or that through some means, peace throughout the world will come in place of world-wide conflict. Of the two, the first prospect offers less uncertainty as to the position of industry than does that of sudden peace.

To as closely as possible discern the future's effect on business, using the term as involving the creation of all commodities and materials and their sale and transportation, it is necessary to turn to the past, for there lies the one lesson for guidance.

There is no question that the past few months has seen a more general realization of the fact that we are in a man-sized war than has any period since we entered the conflict. The sending of men to the training camps and across the water revealed to the nation a promise of sterner developments in the near future. The nation's participation had, before this realization became country-wide, been a thing rather apart from everyday life, a movement which the people for the most part watched more as an audience than as performers. But it is one big stage now—we are all performers and each has his part in the caste. The dress rehearsals are over and we have gotten down to the grim business of putting the thing over and doing a good job of it.

National participation in the prosecution of the war is having two effects. The first effect is positive and direct and emanates from the guiding heads at Washington. It concerns the bearing which specific war needs have upon industries.

The second is psychological and is felt through the influence of war thought upon the population as a whole. It affects the business situation not through direct action or mandate, but by changing the temper of our population effecting a gradual cooling off of our arder for frivolity and extravagance and a resolve to provide for uncertainties of the future by saving during the present.

The greatest effect of the first influence has come through gradually increased restriction on shipment of commercial lines, and through the turning of labor and manufacturing resources into war work. On the other hand, it cannot be said that the effect of the public attitude towards war conditions has yet been overmarked. Nevertheless it has been sufficient to cause some uneasiness in nor-

mal commercial channels. Such reaction, though as might be detrimental to business and as coming through the public initiative has in the main been caused by high prices of materials and labor which have restricted investment and development, and through high prices of necessities which have quite radically curtailed the purchase of those things not strictly necessary.

But whatever might be the economist's explanation, the fact remains that during the latter months of 1917 the trades upon which lumbermen have counted for the movement of most of their product have shown less and less tendency to active buying. On the other hand, this has been balanced by the sensational expansion in the needs for war prosecution, and it has been authoritatively stated that when war production is in full swing it will require (considering what goes directly into war appliances as well as the thousands and thousands of accessories) 50 to 60 per cent of the producing capacity of the sawmills. As under normal conditions the full production has been taken care of through regular commercial outlets, the prospect is directly encouraging.

The building business was one of the first and most seriously hit of all lines. Building has been restricted to the point where the need for new construction for residences and industrial purposes demands resumption of operation. The building restriction has without doubt reached its lowest ebb, and yet it has as a whole fallen off considerably less than one-half. There is no reason for thinking that any normal industry will be curtailed to a greater extent than this; that is, considering normal industries as a whole. Some will be curtailed to the vanishing point, but the average curtailment will undoubtedly not show more than a 30 or 40 per cent restriction at the extreme. This means that the lowest ebb of wartime production of commercial commodities will probably be not less than 50 per cent of normal production, and 60 to 75 per cent might be nearer the mark. Then, placing war production on top of this will mean that between the two influences the production of hardwood lumber will be balanced by more than an adequate market. This, of course, is merely a theoretical glimpse of what may possibly develop. In the meantime, the big problem is to readjust production so that it may fit in properly, providing its quota of material for normal lines and at the same time being in position to produce with the utmost expedition and efficiency for war purposes.

The one thing absolutely certain is that the average selling price for lumber will in the future more fairly represent the worth of material than ever in the past. There continue to be radical and in many cases ridiculous fluctuations and spreads, but mounting costs are gradually forcing a close analysis of production figures. Considering that mills as a whole necessarily operate on approxi-

mately the same cost, the result of this analysis must inevitably be more uniform, ideas of fair selling prices with a readjustment to meet war needs, thus bringing about a better balance in commercial lines, this influence would be even more marked.

Another factor having a great deal to do with prices is the mounting evidence that the lumber trade will be hard pushed to provide sufficient stocks to meet demands. Labor difficulties—increasing scarcity of experienced help, and increasing inefficiency of pick-up labor being the chief troubles—are going to be great drags on lumber production during 1918. Many northern mills are providing for day and night shifts so that this effect may be overcome as far as possible. Prospective night runs though will result in an even further reduced production per man in all probability.

Lumber will be strong in 1918 because there will be need for all that can be produced and shipped. Commercial lumber products will continue good property because commercial needs will inevitably take second place to government needs. If this is not brought about through voluntary action by lumber producers and users, it will be brought about arbitrarily by the authorities at Washington. In the end it will be the same.

A Wheelbarrowful of Lumber

EVERY PRODUCER AND SELLER of hardwood lumber should secure a copy of the December 15 issue of the *Saturday Evening Post*. We refer in that issue to the full page advertisement of the Pullman Company. Read that advertisement and see the fate which is in store for lumber if lumbermen do not keep constantly before them, even in these times of stress, the fact that the future of lumber rests with the lumbermen themselves.

The Pullman Company hands out to the public as a piece of delectable bait the statement that in its modern, almost aseptic cars, the wood used would hardly fill one wheelbarrow. Just think of it! A scant wheelbarrowful of wood now used where a few years ago several hundreds of feet were used. And the Pullman cars use but a small percentage of the total. The same change is true in the construction of day coaches, dining cars, mail cars, express cars and so on down the line of railway rolling stock.

It matters not that the Pullman Company lays itself open to criticism through this advertisement; criticism of its statement of facts on the one hand and criticism of its policy in thus unnecessarily and unjustifiably knocking a stable and necessary article on the other. The influence of what in effect is a direct statement by the Pullman Company that wood construction cannot be made sanitary might and probably will be disastrous to lumber, not in a way that will be discernible by lumber manufacturers immediately, but in that it contributes another point of the public's misconception of the proper use and utility of lumber and wood products.

The Pullman Company advertises the car with the wheelbarrowful of wood as the nearest possible approach to the sanitary vehicle. Sanitation has been the plea upon which all interior work has been eliminated from Pullman and other cars. Had lumbermen found out how wood could be made just as sanitary as steel they would have had a strong case, for no one will argue that a wooden interior is not more comfortable, both actually and suggestively, than a steel interior. If lumbermen had found out how wood could be applied with adequate provision for sanitation, the Pullman Company would not now be advertising that its new cars contain no more than a wheelbarrowful of wood.

Less there be other wheelbarrow advertisements in the future, let lumbermen heed the necessity and now while the public is hearing more about wood than it ever did, do a little talking and investigating of their own, so that the public may know the how and the why of lumber's proper use and so that after the war is over the market for lumber may be on the increase and not on the decrease.

More Initiative Needed

DURING THE RECENT ANNUAL MEETING of the Veneer and Panel Manufacturers' Association in Chicago, emphasis was laid on one feature of the war situation by several members who had lately been in Washington where they had discussed

business matters with boards, committees, and officials. It was the opinion gained from talks with government officials that men and associations which are in a position to supply the government with war material should at once make known what they can furnish, and when; and not wait to be asked. They should decide what service they can render, then offer that service, and not be backward about it.

To make it a specific case, the manufacturer of veneer panels ought to determine what kinds of panels he can make, how many he can produce in a given time, and what facilities he has for increasing the quantity and kinds of his output, and he should offer his services to the government, without waiting for a special call. The call has already gone out to every man and association, and the answer ought to come back promptly in no uncertain terms. The government needs men with initiative, men who do not need to be told what to do, but who can think on their own account.

There is abundant testimony that the war boards will welcome offers from men of that kind, men who can see an opportunity and grasp a problem without being told or shown. The man who knows what he can do and offers to do it is the man who will be welcome. Many a man who has something for sale and will make the fact known will get war business which he would never hear of if he should sit down and wait for the government to locate his place of business.

It was stated that a large order for veneers was recently placed with difficulty, not because of scarcity of that kind of stock, but because those who were placing the order did not know who had such stock for sale. It is needless to say that the order would have gone to men who had previously made known the fact that they could furnish the material. The war boards will welcome offers, and they want information. Instead of turning a proffer down cold, they gladly list it where it can be referred to when needed.

Emphasis has been laid on the fact that better success will follow if business men act through their associations than if they attempt to go it alone. This proves the importance of the associations and how greatly it increases the powers and opportunities of the individual members.

A Country for Sale

SOMEBODY HAS STARTED THE REPORT that a movement is on foot for selling Siberia to the United States for \$30,000,000. Let it be hoped that no foundation exists for such a report. The purchase of Siberia by this country would be foolish. It would be unwise to accept it as a gift, with all its great resources. Its gold mines are among the richest in the world. Its agricultural lands compare with those of Minnesota, Iowa, and Nebraska, and are first class. Its forests are as extensive as those of the United States, though probably not quite so valuable. But notwithstanding all these resources, we should leave Siberia alone so far as any propaganda for its purchase is concerned.

In the first place, by buying it, we would buy a war with what may be left of Russia, for no government now exists there with authority to sell Siberia. We would come into immediate possession of an insurrection, for the Siberians are at it now and have the habit. We would lay the foundation for war with Japan without fail, and for probable war with China, Persia and other countries on the border. We have enough trouble of our own without buying more.

Siberia is as large as the United States, and it has resources for developing great wealth; but it is too much like a yellow-jackets' nest to offer any temptation to us. It is a good country for the United States to let alone. The wisdom of taking over the Philippines has not yet been entirely proved, and there are ten reasons against taking Siberia to one for not taking the Philippines. Let the Siberians work out their own salvation. We can trade with them, help them, and encourage them, but we don't want to buy their country nor would it be acceptable if tendered to us as a gift.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

Reorganization in Signal Corps

There has been a reorganization of the Signal Corps system of obtaining wood for airplane production. The old wood section of the corps has been abolished and Major Charles R. Sligh, Grand Rapids, Mich., furniture manufacturer, who was in charge of it for a time, has been transferred elsewhere. The hardwood end of the game is now in charge of Major Shepler, chief of the division of planes production of the Signal Corps. He will have an assistant devoting himself partly to the hardwood situation and partly to dealing with questions pertaining to the ash, walnut, cherry, birch, maple, oak, mahogany and other kinds of wood used in making propellers and other parts of airplanes.

The main part of the work of the old wood section, however, has been converted into the division of spruce production of which Col. Bryce P. Disque, formerly warden of the Michigan state prison at Jackson, Mich., is the head. Col. Disque is in the field with headquarters on the West Coast, devoting his energies to obtaining spruce and fir for airplanes for America and her allies. He is said to have ample assistance, funds and authority. As to the latter, he has power to raise a military force of 8,000 men to get the material out of the woods and to run the sawmills if necessary, or protect the work on the government timber at least.

Assisting Col. Disque are Russel Hawkins, in charge of logging and milling operations, with headquarters at Portland, Ore.; Lieut. J. Van D. Crisp, disbursing officer, also at Portland; and Major Fred W. Leadbetter, who is an old lumberman, paper manufacturer and railroad builder. His office is here and in it G. E. Lippincott, of Philadelphia, a wholesale lumberman, is on duty.

The reorganization plan is understood to be practically along lines recommended by E. T. Allen, who at one time represented the government in the spruce and fir country in connection with the aviation program. Allen resigned several months ago because of differences with Sligh and now Sligh has been transferred. He may not stay out of the airplane work, however, as he is a candidate for appointment to the new aircraft board. If he is appointed he will in a measure supervise the work of the men who have succeeded him in charge of the wood end of airplane production.

Lumber Bureaus Active

The latest lumber bureau to open here is the Alabama-Mississippi Emergency Bureau, which has an office in the Munsey building, in charge of M. L. Wootten of the Standard Lumber Company of Birmingham, Ala.

The Douglas Fir bureau has received two big orders lately: one for 20,000,000 feet of material for barges and lighters to be built on the Atlantic coast for use by the army quartermasters in loading vessels for France; the other of 24,000,000 feet for airplanes for the Italian government.

The Georgia-Florida emergency bureau has received an order for 30,000 additional pieces of piling and the North Carolina Pine bureau has been called upon to offer piling for the first time since the beginning of the war.

Many millions of feet of lumber are being ordered chiefly from the pine bureaus for the construction of warehouses, shipyards, piers, embarkation camps, supply depots, etc., in Virginia, New Jersey, Maryland and other states. The details of these projects are not generally available.

Matters of Price

The question of prices paid by the government for lumber for cantonments and other war purposes has been arranged for a time. The prices charged by the Southern Pine and Georgia-Florida emergency bureaus for the month ending December 10 are in effect until March 10 unless the Federal Trade Commission finds meanwhile that the labor cost in producing the material is higher than it was during the fall and early winter, in which case the price will be adjusted accordingly January 10 or February 10.

Prices of shipbuilding material are not touched at all. Prices

of fir for other government purposes, especially shipyard construction in the east, for 90 days beginning December 10 are to be stationary, it is reported, at a slight reduction below the current market. Prices of North Carolina pine placed through the N. C. Pine bureau are to be based on delivery at Norfolk, Va., the government paying the freight beyond that point, which practically causes a slight increase in the cost of such lumber to the government.

The trade commission hopes to be able to submit some interesting reports on the cost of lumber production in connection with government war contracts and otherwise. The commission has a staff of men at work on the study of costs. It is said to have data on costs at 42 southern pine mills and to be getting such data from 25 or 30 more mills, the whole collection to be typical of the industry, large, middle class, and small mills.

The commission is being assisted in work on details and methods of cost accounting for the lumber industry by P. C. Riekey of the Long Bell Lumber Company and W. L. Wuescher of the Great Southern Lumber Company.

F. K. Paxton, assistant purchasing agent of the Emergency Fleet Corporation, is understood to have made arrangements for commandeering barges and tugs to bring up timber, piles and lumber from the southern states to the ship yards and other construction work and shipbuilding plants of the north Atlantic coast, thus relieving the railroads to that extent.

The railroads in the East have embargoed lumber and other things north of Richmond, Va.

It is understood that there will be no contracts let immediately for portable buildings for the American army abroad, on account of the scarcity of shipping tonnage to carry it across the sea. Later on the portable house matter presumably will be taken up.

Mr. Yegge has been in charge recently of the office of the National Association of Box Manufacturers in this city. Secretary F. C. Gifford has been in the West for a time. The box association has been offering its services to the government, in conferences through a committee with officers of the Council of National Defense, War Department, etc. The box people are ready to cooperate and to help, but their assistance has not been sought to any extent as yet by the managers of the war machine here. Hardwoods will be required in quantities for many boxes, and box manufacturers say that the specifications of the government are not practicable. One type of box about which the manufacturers have been talking with ordnance officers is to carry detonating fuses. The box is birch wood, rather strong and heavy, tin lined, and has two trays in it with a number of holes in them, through which the fuses are passed, holding them in place.

Officers Appointed

A number of additional officers have been assigned very recently to the 20th Engineer forestry regiment, at American University Camp.

Men are being commissioned officers in the spruce battalion being organized by Col. Disque on the Pacific Coast to cut and manufacture airplane stock. On the other hand, it is stated that about 100 men who were examined for commissions in the forestry regiment have been advised that they will not be needed.

H. H. Sheep of Florida, formerly in charge of the Georgia-Florida Yellow Pine Emergency Bureau here, has been commissioned lieutenant at Fort Oglethorpe officers' training camp. George Craig of Philadelphia has been assigned to the job of recruiting men there for overseas service in the forestry regiments, it is reported. Major Kelly of the 20th engineers expects to go across with the next battalion that goes. He has been doing great work in organizing and equipping the regiment. E. G. Griggs, former president of the National Lumber Manufacturers' Association, hears that his prospect for a commission in the forest regiment seem good. His friends hope it will soon be "Major" Griggs. R. B. Allen, secretary of

the West Coast Lumbermen's Association, is also reported to have prospects for an army commission.

Meeting of Lumbermen

A representative delegation of lumbermen from the National and other trade associations attended the recent conference of war service committees here called by the Chamber of Commerce of the United States. The lumbermen attending the meeting talked of the possibility of greater co-operation in the industry and between it and the box industry and related industries. The lumbermen had an advantage over most of the other industries represented at the conference because they are already largely mobilized for war work for the government. The lumber delegates registered as follows:

J. E. Rhodes, National Lumber Manufacturers' Association; A. R. Turnbull, N. C. Pine Association, Norfolk, Va.; Sam E. Barr, National Hardwood Lumber Association, Chicago, Ill.; E. T. Allen, National Lumber Manufacturers' Association; M. E. Preisch, National Wholesale Lumber Dealers' Association, New York; E. F. Perry, National Wholesale Lumber Dealers' Association, New York; Thos. A. Jones, Columbus Lumber Trade Exchange, Columbus, Ohio; J. C. Marshall, Lumber Trade Exchange, Columbus, Ohio.

Mr. Rhodes, serving chairman, addressed the meeting and explained the extent to which lumbermen had been able to assist the government in its herculean task of putting the country on a war footing, and dwelt with particular emphasis upon what the Southern Pine Association has been able to do.

Supplies of Walnut

An authoritative statement has been obtained about the recent government conference with walnut men and the situation generally as regards walnut lumber supply. The statement is as follows:

The director of lumber and members of his staff have completed a survey of the walnut situation in which they have had the assistance of a number of well-known specialists in manufacturing walnut lumber. The result is reassuring as to the adequacy of the American supply for gun stocks and airplane propeller material, in view of the requirements not only of the United States but of its allies. As a result of the conference it seems desirable that R. H. Downman, director of lumber, should be advised by individuals who are in a position to supply either walnut logs or walnut flitches, 8" and over wide and 8' and over long, with a statement of prices they want for the material. While the amount of walnut available seems to be sufficient for all practical purposes, parties submitting this information may be provided with a market for their product with which they are not now familiar. Ordinarily, the supply of walnut most suitable in size and quality and near the existing market will, no doubt, have first call on the business. This suggests a means by which owners of walnut can show their patriotism.

It is inadvisable for them to attempt to profiteer in walnut. There is nothing in the situation to justify inflation of prices. Figures at which present business is being placed are such as to insure a satisfactory profit.

Four substitutes for walnut for gun stocks are available and in the order of their suitability they are birch, mahogany, maple and gum. The United States government has not had to use any of them. The Russian Government has had many gun stocks made of birch.

This government has in sight a definite supply of 2½" birch as a reserve against any temporary break in the walnut supply that might result from a long spell of bad weather or poor condition of the country roads. Walnut is preferred for gun stocks, but this government will use substitutes for it if necessary.

A high compliment was recently paid to the lumber industry by Mr. Barouch of the War Industries Board, in charge of the raw material division, when he declared that no industry has done more than the lumber industry in assisting the government in its war preparations, and that opinion was shared by the secretary of war.

While the lumbermen realize that the necessities of the nation made it possible for them to demonstrate the efficiency of their organizations, and conclusively prove that there has been no desire on their part to profiteer at the expense of the people, they have sufficient faith in the patriotism of the majority of men identified with other industries, to know that had they been called upon for similar service they would have as fully measured up just to the opportunity.

Forest Service and the War

In the forester's annual report he points out the methods and plans of the Forest Service to turn its resources and facilities over to the assistance of the war forces. Speaking of the uses of wood along that line, he says:

On aircraft the efforts of the service have included the development of methods by which spruce and ash can be artificially dried without loss of strength and toughness, obviously involving supplementary strength tests; tests to determine the best substitutes for these species, and for each species selected the development of safe methods of artificial drying; study of the effects of steaming on mechanical properties of ash and spruce, to develop the best conditions for bending; the selection of the woods most suitable for propellers; tests to determine the proper methods of conditioning and the best technique for propeller construction; strength tests on veneers and built-up construction; advice and assistance on specifications; and the training of inspectors of wood for airplanes.

On wooden ships an attempt is being made to cover the whole field of the proper technical use of wood, including specifications, the best methods of conditioning, preservative treatment against decay and marine borers, the selection of substitutes, steaming and bending, etc.

Efforts on vehicles have been centered mainly on the development of methods of drying the hardwoods which are used, and assistance to manufacturers in putting the best methods into commercial practice. Wherever possible assistance has been given to hardwood distillation plants in order to increase the production of acetone and other products so greatly in demand for munitions making. A commercial demonstration has shown that the cost of producing ethyl alcohol from wood waste can be materially reduced. Profitable production is important from the standpoint of munition making, and also food conservation. Methods have been developed in commercial demonstrations under which walnut and birch can be kiln dried for gun stocks in a much reduced time with comparatively little loss.

In general, much assistance has been given on a great variety of war problems relating to forest resources and the manufacture, purchase, and most efficient use of wood and other forest products.

Data urgently needed as a basis for airplane design and construction, regarding such matters as the selection of the best species and the best substitutes, the development of safe methods of artificial drying, and the best technique in construction, can not be supplied as rapidly as they are needed with the present force and equipment. An increase in funds for this important work is urgently called for.

Chair makers Are Handicapped

A Washington newspaper publishes the following explanation of why there is said to be a shortage of furniture in the North:

"If some of our brethren of the North have no chairs to sit in, blame it on the war," remarked Zeb Vance Walser, a prominent lawyer of Lexington, N. C., at the Raleigh. "That part of North Carolina in which I live—the western part—has become one of the most important furniture manufacturing centers of the United States," continued Mr. Walser, "and the manufacturers have just begun to feel the pinch of the war. In other words, they have only recently come to understand and to realize in the full sense that furniture making is not classed as an essential industry. The result is that the factories of western North Carolina are bulging with furniture stock that cannot find its way to market. There is no trouble getting the furniture as far as Washington, but there it stops, and it has been practically impossible to get transportation farther north. It is, of course, a matter of deep concern to our manufacturers, and means that if there is no relief the factories will have to shut down. I have no doubt that if the exigencies of war should demand it the furniture men would accept the situation cheerfully, for they know, as we all know, that everything must be subordinated to the requirements of the war."

The Webb Bill

The Webb export trade bill in which lumbermen throughout the country are very much interested, has passed the senate at last and gone to a conference committee representing the two houses of congress, where differences between them will be adjusted. The bill permits combinations among exporters so that they can compete with foreign monopolies in the markets of the world.

The Eight-Hour Law

The Western Pine Association, which employs 16,000 men and has an annual cut of 2,200,000,000 feet, has announced that it has adopted the eight-hour working day, which will go into effect January 1, 1918.

Not only is eight hours proposed for logging camps and lumber mills, but, in a bill recently introduced by Representative Kelly of Pennsylvania, the eight-hour principle would have to be applied to the production of all sorts of manufactures of wood, and to the products of every factory, mine, workshop and other establishment if it is to enter interstate or foreign commerce.

Forest Products Statistics

Director of the Census Rogers recommends in his annual report that statistics of forest products ought to be collected and published regularly. It is well known that the main feature of such statistics heretofore has been their irregularity and the lack of plan and system in their compilation and publication. Another criticism has been the delay in such publication, such statistics often being two or three years late.

Federal Trade Commission's Report

The Federal Trade Commission has submitted its annual report, saying, among other things:

The general investigation of the lumber industry commenced during the fiscal year 1916 was continued, especially with respect to the fundamental conditions in private holding of timber and the manufacture of lumber and with methods of trade organization in the lumber industry. During the fiscal year 1917 the commission has assisted the forest service in the preparation and publication of several numbers of its series of "Studies in the Lumber Industry." In its work on the problems of the

lumber industry it has had the cooperation of the Bureau of Foreign and Domestic Commerce and the Forest Service. As a result of this joint investigation there was created in April, 1917, an advisory committee on forest industries to study continuously the problems of timber using industries and to determine a national policy with respect to standing timber resources. On this committee are represented the forest service, the bureau of foreign and domestic commerce, and the federal trade commission. Conferences and hearings with other government agencies and with representatives of the industry have been continued.

Differences in Housing Program

A complete investigation of the shipping board and the shipbuilding program was recently ordered by the Senate, which instructed its commerce committee to make an inquiry. The probe will cover the wooden ship program and other operations of the board, its fleet corporation, and other phases of the situation.

The investigation resolution followed the latest shakeup in the board, which included the resignation of Rear Admiral Harris as general manager of the fleet corporation, the promotion of Charles Piez as his successor, and other changes. Chairman Hurley announced that James Heyworth would remain in charge of wooden shipbuilding, and that Admiral Bowles would have an important place in the new organization.

The retirement of Harris after only about a month's service as successor to Admiral Capps was due in part to differences he had with the board over the question of housing. Mr. Hurley said Harris wanted to embark immediately upon a housing program to cost \$12,000,000 to take care of workmen at shipbuilding yards. The board is working on the housing question, J. R. Flannery being in charge of the work. The board is reported to plan lending money to shipyards so that they can build houses for their employees. It may have to buy or build houses itself; or it can co-operate with states and cities in providing housing. It is reported to be planning alternate rows of frame and brick houses in shipbuilding towns so that the fire risk will not be so great as though all wooden houses were erected.

Planing Mills Put on War Footing

A company under the name of the St. Louis Wood Products Company, St. Louis, Mo., composed of seventeen sash, door and millwork interests, has recently been incorporated under the Delaware laws, with a capital stock of \$25,000. The object of the corporation is to consolidate facilities

for securing contracts from the government for material in the construction of cantonments, war emergency buildings and the manufacture of cases and boxes for the shipment of supplies and ammunition.

The officers of the new company are: President, E. T. Bradbury, Riddle-Rehbein Manufacturing Company; vice presidents, Geo. H. Fox, Fox Bros. Manufacturing Company; Christ Beckemeyer, Gravois Planing Mill Company, and W. E. Hay, Wellston Planing Mill Company, who is also director of sales; secretary, J. P. Larson, manager of the Planing Mill Listing Bureau; treasurer, Charles E. Reis, Carondelet Planing Mill Company.

Personal Mention

Joseph Lang was here recently on a tour of shipbuilding yards, which he is visiting for the Southern Pine Emergency Bureau to see how the wooden ship and shipyard construction work for which it is furnishing materials is going.

Examiner Chantland of the Federal Trade Commission has gone West to confer with persons connected with the complaint filed by the commission some time ago against a number of lumber concerns and others in the Northwest and middle West, alleging unfair competitive methods in their dealings with the mail order houses.

A. E. Clarke of Edward Clarke & Sons, Toronto, and Gardiner I. Jones, Boston, are among the hardwood men here this week in connection with government business and other matters.

Roy H. Jones, manager of the Northern Hardwood Emergency Bureau, expects to spend Christmas in New York.

Director of Lumber Downman has gone to his Virginia farm for the holidays.

C. H. Worcester, one of the hardwood men on Mr. Downman's staff, has gone to Chicago for the holidays.

Horace A. Taylor, the other hardwood advisor of the government, goes to his home in Buffalo for Christmas.

Other lumbermen in town are B. B. Burns of Huntington, W. Va., and R. L. Jurden, Memphis, a subcommittee in charge of the Southern Hardwood Emergency Bureau; L. F. McAleer of the Natabany Lumber Company, who represented wooden paving block interests in the east; George Dascomb of the Dascomb Lumber Company, Chicago, and others.

Lumbermen Are Coming Through

Revelations at Washington since Congress reconvened strikingly prove that the biggest opportunity for helping the nation in this crisis lies not in money contributions but in the contribution of personal services. The money can be secured. If it is not forthcoming through appeal it will be raised through taxation and similar means. But the country would be no better off had it \$50,000,000,000 in its treasury if there were no organization for converting that money into the means required to fight our battles on land and sea.

The only personal service of any consequence or value is that service offered by the unselfish business man who is beyond the point where he is looking for aggrandizement in honor or money. The voluntary offering of brain power by men whose brains have brought them to success in their own business is the highest duty of the leaders in industry, commerce and business. So far as this willingness to sacrifice has gone, the lumber trade may be proud of its contribution. Leaders in the industry, men whose time is worth untold dollars to themselves if applied in their own interest, have laid aside thoughts of their personal organizations and have entered into the work of helping whip into shape Uncle Sam's big business so far as it concerns timber, lumber and resulting products.

As an illustration of the way business brains will help where professional and political brains would not may be cited a little incident which has been mentioned in *HARDWOOD RECORD* before. It concerns a representative of one of the allied governments who was here to contract for purchase of millions of dollars worth of material which would come from the lumber field. It seems that this man's contracts were completed and that the conditions under which he had worked them up provided that when the transactions went through his personal gain would be a cool million dollars. His figures, to the professional mind, would not have signified anything out of the ordinary.

Frank F. Fish, secretary of the National Hardwood Lumber Association, in telling of this incident before the recent veneer

and panel meeting, stated that after the contracts had all been signed up and were ready for delivery they were brought to the attention of R. H. Downman, who now has entire charge of lumber purchases for the allied and United States governments. Mr. Downman, being a practical lumberman, immediately perceived the camouflaged graft and took steps to stop the transaction, thereby saving the Italian government on one order exactly \$1,000,000.

This, as stated, is just one instance showing why men who have practical business experience in their respective lines should be willing to give their services to the government and why the government should rely in every way upon officials chosen from the respective fields of industry and business.

Mr. Fish in the same talk went on to tell about the work his association is doing at Washington, mentioning the new War Service Bureau of the association, organized two or three weeks ago at the request of Mr. Downman. In this connection Mr. Fish said he called at the offices of all the officials who might be interested in hardwood purchases and tendered the services of his entire corps of highly trained inspectors amounting to almost one hundred men. His tenders were gratefully accepted in each case and since his return from Washington he has had requests for the services of about a dozen inspectors on government work.

Lumbermen are coming through—they are coming through wholeheartedly and voluntarily, with earnestness and sincerity behind everything they do or suggest. If the efficiency and earnestness with which lumbermen's efforts were co-ordinated and are being administered characterized all branches of the work of the government itself, we would need to have no fear that the fullest measure of results in the quickest possible time would be achieved from the immense expenditure of money which the government has contracted and will contract for.

When the head of an institution is always on time in the morning there is not a very imperative call for the use of the time clock.

Seasons Greetings

As the year closes our thoughts go to you with whom the past twelve months have brought such pleasant contacts.

It is our cordial wish that you may feel to the full the Season's halo of memories and realities---that you may approach the new year with a firm foundation of accomplishment in the old which will insure your successfully meeting the issues of 1918 ❄

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

War Creates New Demand for Veneer

Address by B. W. Lord Before the National Veneer and Panel Manufacturers' Association, December 11, 1917*

WE ARE AT WAR with the greatest military organization the world has ever known and we are in very serious war—how serious no one of us has the least conception. As President Wilson stated in his message to Congress, the first thing we must all consider is to win the war and take up other matters afterward.

This war game is the greatest game that has ever been played, and if any of you gentlemen wish to realize what it means, you should spend some time in Washington and see what the government is doing to organize, systematize and equip along every possible line of offense and defense, and the tremendous army of business men who are giving their time and their efforts, absolutely unselfish, to help the government in this crisis.

One of the best posted men in Washington stated to me last week that the two matters which the different war boards consider of the greatest importance and the greatest necessity are the immediate construction of our merchant marine and the immediate construction and equipment of our air fighting forces.

The training of our aviators amounts to nothing unless they are supplied with enough and properly equipped battleplanes, and these battleplanes mean a large amount of veneer and panels. How large that amount is no one seems to know, but I want to give you a few reports which I have heard and I want to give them to you without any authentic basis for these statements.

It is reported that the government has placed orders for 22,000 battleplanes and these are to be followed with orders for 75,000 more.

From a prominent business man who is giving his time and is going to France to serve the country in the assembling of airplanes, I received the information that one plant was being constructed and equipped for the building of the Liberty motor and they were equipping their plant for a capacity of 500 motors per day.

The government recently placed an order for a million and a half feet of panels for 3,000 airplanes, which figures about 500 feet of panels to the plane, so that if these Liberty motors were all used for airplanes, it would require about 250,000 feet of panels per day to build planes for the motors.

In addition to the battleplanes that our own country requires, England and France are depending largely upon this country for their supply of veneer and panels for the construction of their planes, so that the amount of material that the veneer mills and panel mills would be

called upon to supply for the war work would be very great indeed.

ADDITIONAL MATERIAL NEEDED

In addition to the airplanes, there will be a large number of hydroplanes required, which come under the Navy Department. Then, in addition to these, a large amount of material is required for storage battery separators for batteries of all kinds; not only for motor vehicles, submarines, field batteries, but for every other purpose. Then there is material used for high-powered switches, and panels used for engine beds, and undoubtedly there will be a great many other purposes for which veneer and panels will be required.

There is considerable talk of using a three-ply case for munition boxes on account of having to ship our stock across the water and such a great distance, and if the government shall use built-up stock for boxes, the amount required will be tremendous.

There has been a very large use of built-up stock for diaphragms in shell boxes. The English shell box is made with diaphragms for holding the shells. These boxes contain four shells—the shells put in with the points down, and three diaphragms—one at the bottom, one at the top, one about the middle. Diaphragms are about 9 inches square with four holes.

In the Russian shell box and the French shell box the shells are packed either two layers of four or three layers of three, the shells lying horizontal and kept separate by a system of blocks and wedges.

As to the American shell box, evidently the fiber box people got busy and had the specifications call for each shell to be in a fiber container and the shells carried horizontally, but some shells that were to be stored and not used soon were to be encased in tin hermetically sealed.

If the veneer people were properly organized and properly represented, they should have the merits of the diaphragm box as adopted by the English war board thoroughly investigated and tried out, and properly brought before the proper board.

BIDS ARE FEW

While in Washington last week Mr. Young and I called at the signal corps department and they showed us an order for 1,500,000 feet of panels that they had recently placed, and they had very few bidders and they did not know whom to go to secure this material.

In calling upon the British munition board they showed me an order for 12,000,000 feet of rotary veneer that they wished to place. They had only one bid on it and

*The war service committee suggested by Mr. Lord was created and means for the financing of its work were provided in the session.

did not know to whom to go for the material. The one bid they had was from a concern not strictly in the veneer business.

In talking with the different war boards, none of them seemed to know of whom to secure veneer or panels, and there seems to be a strong desire to know whom to go to to secure information. The feeling seemed to be that they would like to work through an association or war committee representing an association, as under the present conditions some outsiders get in touch with some war board that has a large order to place and accepts the order and then goes around and scalps on it. This is not efficiency; it is not economy; and it is not for the best interests of either the veneer or panel industry, and it is certainly not to the best interest of the government.

LACK OF INFORMATION

Another very vital point is that specifications are submitted for material and these specifications may not be submitted with the full knowledge of the actual conditions, so that if a practical committee representing the veneer and panel men could confer with these boards, submitting specifications, those specifications could undoubtedly be modified in different ways to enable the mills to produce the stock better, more economically and more quickly and to save the government a large amount of money.

The Forest Products Laboratory at Madison is doing wonderful work in its tests and experiments, as it undoubtedly appreciates the conditions under which so many specifications are submitted, and if this association had a war committee or a war council, it could probably co-operate with the Forest Products Laboratory and might be able to give some assistance in the hard work which the laboratory has in approving or disapproving woods or panels that are submitted to it.

FOREIGN SPECIFICATIONS

This country has not had any practical experience in battleplanes and is relying upon the experience that England and France have had with their battleplanes. Specifications for American planes are being made according to the construction of English and French planes, and while the first object is to have a battleplane safe, and one that will stand the actual tests which it has to go through, still we must take into consideration that the foreign planes are built in foreign countries and are built of what wood and what material are available in those countries. This country may be able to build a better plane with the material we have, and that is preferable to trying to imitate the foreign countries with what material they have available. This problem, as I understand it, is the one that the Forest Products Laboratory has to solve and I think every veneer man and every panel man here should give every assistance possible to this laboratory.

These are some of the conditions as they appear to

me. As to the best remedy: Everyone, of course, believes that he can suggest a theory or a plan which will solve all troubles, and the plan which I would like to suggest is not any idea of my own, but is the plan followed out by most of the large industries of this country.

WORKING THROUGH COMMITTEES

The National Chamber of Commerce is forming or has formed a war service board, which is composed of chairmen of war service committees, each chairman representing a committee which represents an industry. This committee of chairmen works in conjunction with the National Council of Defense and this council of chairmen is able to give the government the co-operation of practically all the industries, and it gives it in such a way that the industries can be of great benefit to the government. On the other hand, when any industry needs cars or fuel or anything of that sort, if it is brought up through this council the government is able to give relief, but it probably will be difficult for any individual concern to secure relief unless the matter is brought up in some such way, for the railroad conditions, fuel conditions and all conditions of supply and material will probably become harder and much more difficult as we get further into the war.

If we win the war it is going to require the combined efforts of all the resources of this country, not only in the fighting forces, but the industrial forces, and it will probably require the greatest efficiency of every industry. The only way to secure that efficiency is by co-operation. As you know, the Interstate Commerce Commission has recommended forgetting the Sherman act and pooling all railroads.

ISOLATED EFFORTS WILL FAIL

It is quite possible that some veneer mills or some panel mills can slip around and pick up desirable contracts and make a lot of money, but that is not going to win the war. If we want to do the most good for the country and if we want to win I believe we should forget our personal interests, we should forget all personal feelings, and we should all work with the one purpose of doing the most good for our country when she needs us.

In regard to a war service committee to work with the war council of the National Chamber of Commerce, I believe we should appoint a committee that thoroughly represents us, and in which we have absolute confidence. We should have a committee that represents not only this association, but every veneer mill and panel mill in the country. This committee should not be too large, but it should be representative, and that committee should have power and it should have authority, and it must be backed up by every single manufacturer.

The exports of veneer are not separately shown in government figures. The item is grouped with a miscellaneous collection listed as "all other," and there is no way of telling how important veneer is in the group. It is known that veneer panels are shipped to many countries, some of them going as far as South Africa. The usual name of veneer in foreign countries is ply wood.

The Plant Behind the Service

This view shows a portion of our large modern plant, by means of which we are able to give you as close to one hundred per cent. efficiency in Service as we believe it is possible to obtain. With about one hundred and fifty cars of the choicest logs coming into our walnut mills regularly each month, we are in an excellent position to execute orders for

Walnut Lumber

Forty years' experience has earned for us the reputation of being able to furnish a class of Walnut that is unequalled. That is the reason why our trade is steadily increasing. "Hartzell" Service and Quality mean something. Large stock of all grades and thicknesses constantly ready for shipment.

We also manufacture highly figured **WALNUT VENEERS**, and make a specialty of Table Tops and Talking Machine Dimension Stock.

The Architect and Built-Up Panels

Possibilities of Interesting the Designer in Better Products for Interior Trim

ARCHITECTS ARE PECULIAR. They are different from other people, combining, as they do, engineering with art, business with a profession. They admit their distinctiveness, and hence it may be taken for granted in considering them.

Because they are sui generis, and stand apart from ordinary buyers of various products, manufacturers whose business is influenced to a large extent by the way in which architects favor their goods have found it wise to make a special study of the situation; to organize architectural departments; to train salesmen in the proper method of approaching them, and, in short, to treat the architect exactly as if he were an important, particular, hard-to-sell prospect.

For that is exactly what he is.

Although he does not buy anything outright, his ability to include a product or an idea in a design is so great that it is necessary to get him interested as well as the owner. The latter, recognizing the technical character of building design, usually puts the entire proposition up to the architect, after giving him his ideas in a general way. Thus, no matter how much effort has been spent on the owner, in getting him interested in the use of any

particular item in a new building, it is the architect who has the final say, and whose recommendation goes a long way in the direction of deciding the matter.

What does this mean from the standpoint of the concern making high-grade face veneers or built-up panels suitable for interior trim?

It simply suggests that as part of the sales work which is being undertaken, something be done to interest the architects in this kind of work, and stimulate their efforts to have high-class wood interiors provided for in their designs of fine residences, hotels, clubs, hospitals, schools, theaters and other public buildings.

There is no doubt that a great deal could be done along this line. The possibilities of embellishing interiors by means of the right kind of wood panels, properly finished, are so great that once an architect became really enthused on the subject—as he would probably be if he were given an opportunity to study it at short range—he would be a “fan” on the use of built-up panels ever after, and would lose no opportunity to improve his buildings by the inclusion of fine work of this character. There are so many handsome buildings which are lacking in the elegant, rich and livable qualities produced by wood panels that one is justified in assuming that the lack is due to failure on the part of someone to suggest this treatment to the architect.

Of course, it would not do to go to the designer and tell him of his ignorance on the subject of wood in interior trim. He probably thinks he knows all that it is necessary to have knowledge of on this and every other subject connected with building. His professional dignity might be affronted by a blunt suggestion of this kind. But if a diplomatic salesman were to intimate that he could show some ideas and samples having to do with securing an unusual and distinctive effect for a certain class of buildings, the architect would probably unbend sufficiently to take account of the suggestion and permit the salesman to show what he had to offer.

The veneer man could work along this line with the panel man. In fact, the two should do a little teamwork, because their interests in the matter are mutual. The veneer man seldom hears of the job until the veneers needed for the panels are to be bought, and then the information comes from the concern which is to build the panels and install them. However, if he had been apprised of the project early in the action, he would have been in a position to get in touch with the architect, to show him the possibilities of veneered work in fine woods, and to make certain that the job would include this feature.

There is no reason why those interested in the wood-work should sit back and wait for the final decision to

be made, without bestirring themselves to see that it is made right—that is, favorable to them. If a manufacturer of wall paint or roofing tile or flooring or heating equipment or electric light fixtures or lavatory equipment hears of an important building job, he does not wait for things to happen; but he proceeds to make them happen. His method is to go to the front, take an aggressive stand with reference to the importance of his own product, and see that it gets consideration in the final round-up.

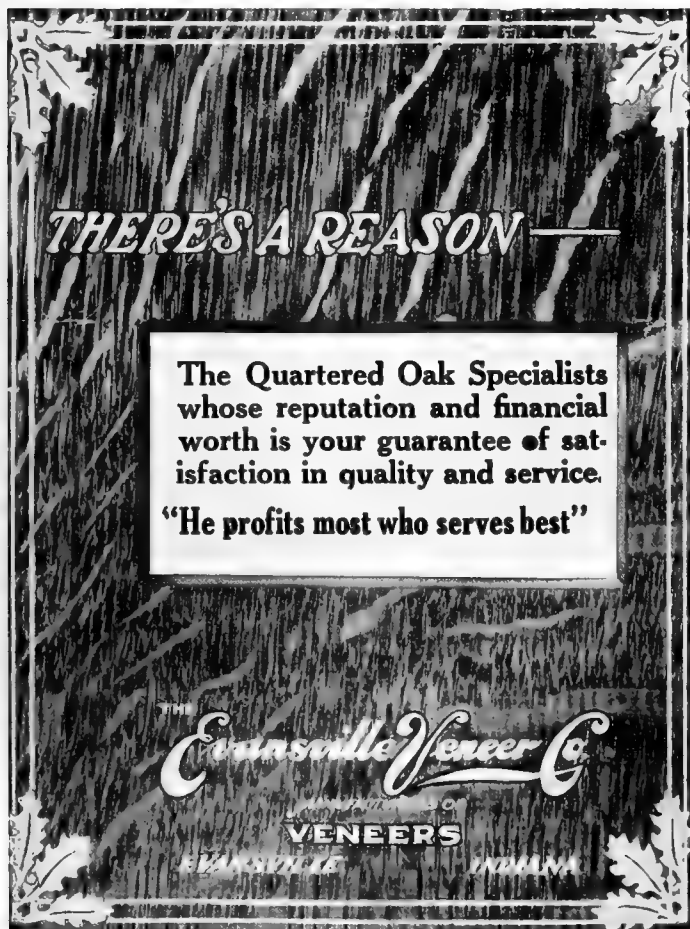

Of course, the situation there is strictly competitive; that is, the manufacturer knows that somebody in his line will get the business, and his job is to see that his own product is given proper consideration before and after bids are taken. In the case of panels for the building, there is danger that this feature may be entirely eliminated; that some other treatment for the walls may be decided upon, and hence that nobody will handle the work. While this makes the immediate competition less evident, the competitive element is still there, but the competition is with other materials instead of other manufacturers in the same field.

The panel concern may perhaps feel that it is better for the veneer company not to appear in the matter, and that it can take care of the business without difficulty. This feature can be solved by a definite arrangement between the veneer and the panel concern, whereby it is understood that the product of the former will be used in case the latter gets the contract. They can both then work to the one end of having wood panels included, and of having the contract awarded to the concern which has demonstrated its ability to furnish the right kind of material for the job which is being figured on.

This is in line with the methods followed by manufacturers in other fields. For instance, if a heating equipment concern is interested in a particular building, it arranges for a certain contractor to submit a bid, based on the use of its product. In other words, it ties up its interests with a particular contractor who will handle the work, and helps him to influence the architect in favor of this product. This plan is generally found to be satisfactory, and the efforts of the two concerns involved are then directed to the same end.

The veneer or panel concern which is interested in the development of building work may not be in a position to go far afield in its efforts along this line. But it is always possible to undertake work in the local field. Every concern which is in a position to supply material suitable for important building jobs ought to cultivate at least the architects in its immediate vicinity, occasionally sending them samples of fine veneers, having a sales representative call to supply information in the event that an important building which may include wood panels is to be erected, and, in short, showing the architect that the facilities of the concern are at his disposal.

This is likely to lead to some interesting and valuable

connections being formed. While, as indicated above, the architect does not regard it as good policy to admit to the general public that he is lacking in knowledge of any phase of building design, he is, in practice, always glad to have a source of information which can be depended upon in certain lines. For instance, architects usually have a high-grade plumber, electrical contractor, heating contractor, etc., on their lists, and when specific information regarding the practical details of these lines is needed, these men are turned to. They are glad to supply the data, of course, since the service strengthens their position with the architect. In the same way the latter would appreciate having a source of information in the person of some qualified veneer or panel man, to whom he could turn when wrestling with the knotty problem of what kind of wood is best suited for a particular interior, and how it should be finished to get the desired results.

Sporadic work with the architects has been undertaken now and then by concerns in the veneer and panel field, but in too few cases has it been carried out on a permanent basis, as a matter of policy. A certain manufacturer of veneered doors has succeeded, as a result of effort of this kind extended over a number of years, in getting the architects all over the country interested to the point of calling on him for advice and suggestions in regard to this feature; and, of course, the business of his company has increased, especially in connection with the sale of fine doors, which are built of the best materials and carry a correspondingly high price.

A well-known manufacturer of mahogany veneers started a campaign a number of years ago, the object of which was to show architects that the cost of mahogany was not excessive, and that this aristocratic material could be used without paying too great a premium. This feature, by the way, is one that could be developed to good advantage for all fine cabinet woods. The labor and other expenses involved in producing interior trim and installing it in a building are far greater than the initial cost of the material; and hence the best of hardwoods can be employed without increasing the expense of the job more than a trifle.

Another veneer manufacturer has been working with architects by suggesting that they ask for samples of fancy veneers when they have a particular job in mind, for which they desire something unusual. By getting them interested in the matter of wood interiors, he has succeeded in making them look to him for information regarding the best to be had in the way of veneers suitable for built-up panel work.

These are only a few instances of what is being done, and it is obvious that they should be multiplied in order to bring the proper amount and degree of pressure to bear on the architect. If the latter were told as much about wood interiors as he is told about paints, for instance, he would be likely to specify this material much more frequently, and at the same time to insist on better products and higher-class panels. The whole industry

would be benefited.

Right now, of course, building operations are below par, and this might be considered a reason for postponing active effort along the line indicated. It is probable, however, that the present lull might make it easier to get the ear of architects than if the plan were attempted

when every office was crowded with work. Leisure makes for education, and propaganda having to do with the increased use and enjoyment of fine veneered panels is certainly education, which should be carried on just as vigorously as circumstances permit and opportunity offers.

The Core Lathe

This Coming Machine Cuts Many Feet of Merchantable Veneer that Would Otherwise Be of Little Value

AS TIMBER BECOMES MORE SCARCE and prices continue to climb, the veneer mill owner, providing he is a man of good judgment, is beginning to look around to see where it may be possible to reduce the cost of manufacture and stop the waste of material. It is a known fact that a few years ago very little attention, if any, was paid to the roundings of the log—the greater percentage was either carted direct to the boiler room or thrown into the hog with its ultimate destination the fire box. Cores were sawed into firewood and sold about town or resold into crating stock.

Today there are some veneer manufacturers who still say that it is a waste of time and money to try to utilize the cores outside of cutting them into crating stock and who maintain that cutting the cores down on a small spindle lathe would result in a product of little value.

If such is the case, why are some of the largest and most prosperous veneer mills in the country installing lathes carrying spindles from $2\frac{7}{8}$ " to $3\frac{7}{8}$ " in diameter?

These lathes are installed for the express purpose of further reducing cores, thus utilizing what would otherwise be refuse. These mills are certainly not doing this merely to have something to do, and could they not see a profit in the operation, it is an assured fact that they would not long continue. A small spindle lathe is a good buy for any mill, not only for cutting down cores, but for handling logs of small diameter as well. For it takes just as long to dog a small log in a machine carrying a six-inch spindle as it does in one carrying $2\frac{7}{8}$ " spindle, and should the log have crooks, by the time it is rounded up in the big machine the operator has already reached his chucks and so far the stock is of little value.

On the other hand, with small spindles, the cutting can continue until the knife gets into the best part of the log and is turning out usable material, thereby greatly increasing the mill's capacity. A small spindle lathe is not recommended for cutting $\frac{1}{4}$ or $\frac{3}{8}$ inch for center stock, or for faces $\frac{1}{16}$ or $\frac{1}{30}$ inch.

D. E. Kline Becomes Veneer Secretary

The biggest thing the veneer trade ever did was to provide for a special war service committee at the recent big meeting in Chicago. The spirit exhibited at the meeting revealed a true appreciation on the part of veneer and panel men of the task which lies before them. This committee, as noted in the last issue, was composed of B. W. Lord, chairman, who is assisted by A. E. Gorham, M. W. Perry, E. R. Morrison, D. E. Kline and R. L. Jurden, a strong representation of the veneer and panel industry within and without the association.

This body held its first meeting in Chicago on Tuesday, December 18, the members getting together at the call of Chairman Lord. It is a notable fact that while all of them live at considerable distance from Chicago, the meeting was attended by every member except R. L. Jurden, who was in Washington at the time on important association business along the same lines as that proposed by the veneer and panel war committee. The committee members in each case made the long trip to Chicago especially for the gathering, and after completing the business, left for their respective plants.

The most important work was the selection of a secretary; this honor falling to D. E. Kline, head of the Louisville Veneer Mills, Louisville, Ky. Mr. Kline is the dean of the veneer industry and his willingness to serve and to give practically his entire time away from his business, is indicative of the earnest purpose inspiring the members of the committee.

It was decided that the committee will have headquarters in Chicago in offices connected with those of the Chicago Veneer Company. This will keep the committee work in active touch with

Chairman Lord, who is president of the Chicago company.

At the same meeting H. E. Young, who is serving as secretary of the association was appointed to fill the vacancy caused by the election of A. E. Gorham to the presidency of the association. Prior to the election at the last meeting, Mr. Gorham had been, as noted, appointed as one of the committee members. The resolution providing for the committee, however, stated that the membership should be made up of the men named, and the president. Mr. Gorham, being elected president also, the vacancy was left which is filled very acceptably by Mr. Young.

Mr. Lord also is planning to give practically his entire time to the work of the association, the purpose of the whole movement being to keep in close touch with problems in Washington, and to act as a means through which the full resources and facilities of the veneer and panel industries may be turned in the most efficient and economical manner possible into channels of national service during the war emergency.

The reason for placing headquarters at a central point near source of supply rather than at Washington, was that there is so much confusion and congestion in Washington that accomplishment would not result in so satisfactory a manner as were the headquarters of the committee near the source of supply. There is, however, representation at Washington at this time, H. A. Webster, a member of the Chicago Veneer Company, and well in touch with war needs, having been in Washington for the past few weeks. He is serving in an unofficial capacity.

It is expected that Mr. Webster will be of material assistance to the committee in its future work, and the committee officials are planning on making frequent trips to Washington, as such trips are considered necessary.

Hitting the Sawdust Trail

The conference of the loggers, manufacturers and operators in this section on Friday, November 30, was an interesting meeting. It brought out the fact that the day has gone by for applying to the railroads themselves expecting to get equipment to keep the mills running. A committee was appointed to spend enough time in Washington to reach such boards as are interested in getting enough cars to move at least sixty per cent of the timber and lumber produced in the Mississippi valley. The meeting was under the auspices of the Southern Hardwood Traffic Association, Jas. B. Stark, president; J. H. Townshend, secretary; and W. A. Ransom, chairman of the logging association, and these associations authorized a committee of eleven to work with Secretary Townshend at Washington reaching boards that would have influence on the government railroad committee for relief, not only on government shipments but on fifty per cent of the lumber in this section which goes into box material, each one of whom are suffering because they cannot get cars and employees enough to get their logs to the mill, and not over sixty per cent enough cars to ship lumber out. It is true there is a little leaven in the dough for a government requisition generally digs up a car, but the trouble is there is not enough of them. Government orders are getting attention but unless permanent relief can be assured during the spring months when cars are always scarce in this section, the consumers of box lumber and cooerage will be high and dry for more material. Every stone must be turned at Washington to make the government officials realize also that while they move heaven and earth to get men in the conflict in Europe and supplies to support them, if they embarrass the various industries who are profit producers, the government will find it pretty hard to collect from concerns which ordinarily are profit makers, and thus the possibilities for getting together eighteen to twenty billion dollars a year will be hampered. The old adage you cannot eat a cake and have it at the same time also applies in commercial life, if committees in charge at Washington will insist on giving war materials and food products all the cars. In other words, the plain citizen, the official and the soldier must co-operate to support the government's requirements, and while there is a desire to make a special effort to this end, wherever one goes there is still plenty of opportunity to help.

The demand for thick lumber still keeps up. Three and four-inch hickory sold for a higher price than ever in its history. Thick timber is in good demand, and ash is still the leader and no doubt will be higher because it is getting more scarce every day. There seems to be a buyer looking for it wherever you turn around. Thick oak is in good demand too. The only bright spot in oak is the price prevailing on railway materials—ties, planking, timbers, etc. Forty dollar ties at Indiana points is something like the real price. Of course this is for a square tie, but if you were to put a cost sheet on it you will find that the valuation is perfectly relative and much lower than similar materials can be bought for in other lines, and one reason that people are criticizing some values of lumber is because they do not compare it with steel and other materials which are 100 per cent more than our price proportionately for the same amount of stuff. There is only one way to look at the oak situation and that is to sum up the costs. I heard a discussion the other morning, and a dealer said, "Why are ties selling for forty dollars? I can't understand why, neither can the purchasing agent." A well-known Kentucky manufacturer said: "I know why. Our logging account, without getting the increased price for stumpage costs \$15 compared with \$7.50 two or three years ago, and our manufacturing and yard and other expenses including overhead, stumpage, etc., put that up to about \$29, and you can see where we land in the way of profit if we sell the stuff even as low as \$37.50. We can't figure that we are getting over a ten per cent profit on the majority of stock that is sold." The trouble is, oak is selling too cheap. It is cheaper really than it was three years ago

when the cost of putting it on the cars was very much less. It is the only wood that has not responded to the increased price necessary to absorb the increased cost and therefore in taking care of the new demand for oak that seems to spring up, both in veneers and lumber, a relative price should be used, not the present one, but one that is relative and more substantial, and if you bill your sales values on that basis, you will sell just as much lumber and you won't have to borrow from the gum account to take care of the oak business.

The Kraetzer-Cured Lumber Company has its general office in the Bank of Commerce building, presided over regularly by Sales Manager James Dulweber. Ben Dulweber, general manager of this company, spends most of his time at the mills at Moorhead. B. F. was talking the other day about the darkies during the Liberty loan campaign, and how they encouraged each man to strive for one or more bonds, and then taking the amount out of their weekly wage. He says it is surprising how interested the darkies were, and how well they supported this movement for government finances. The company is well supplied with orders and the mill is running full time.

H. H. Alexander of Alexander Bros., who have a mill at Belzoni, Miss., stated while in Memphis recently that the new mill would be completed shortly. This mill is equipped with a twelve-foot band and will probably have a resaw back of it. It will be modern in every particular, and will probably be running by the first of the year. This means pretty quick work as they only lost the old mill by fire in October last. They have a fair stock of lumber on hand, and plenty of logs on the right of way.

Frank Fee of the Fee-Crayton Hardwood Lumber Company, Little Rock, Ark., was very enthusiastic about the future of thick lumber, especially ash, hickory and oak. They are running full time, and have some good orders booked, but like every body else they have trouble in getting cars.

It looks like that I. W. W. bunch of hellions is trying to make its way back to the Southwest. One was recently discovered in central Arkansas, and locked up. In his trunk were found blue prints of plants and enough nitroglycerine to blow them all up. It behooves every community to discover those kind of fellows, and if the government won't ride them on a rail out of town where they can't do any damage the citizenship of America ought to step in and hire a few strike-breaking bullies and lose a lot of these irresponsible guys who have no regard for God or man, and who are not worthy of citizenship. Therefore we hope the night riders of the Southland will take them to their bosom to such an extent that they lose their breath. It is up to every operator to keep his eye peeled for any disturbance, and for any influences about the plant that may be controlled by this element.

We believe in every man getting as good wages as possible. Some of our employers are a little careless about looking into the real needs of the occasion and discover malecontents in their organization. This is no time for rough stuff, because every workman, good or bad, is entitled to wages that will remunerate him for his efforts and give him a chance to live, but this I. W. W. crowd is beyond recall. They should be watched carefully, and every effort made to nip any of their schemes in the bud. This is a matter that should be given serious consideration.

I sat on a pile of logs with a veteran of eighty-four the other day, and his eye was just as clear, and his knowledge of trees and logs was as keen as ever. He remarked that "if we old fellows had appreciated the value of good timber and had initiative enough and money in the bank, we might now have much more of this world's goods than we have today. I took \$100,000 out of this field and spent it in real estate, whereas had I just put it in good timberlands, my fortune would have been made. There is one piece of property over here that we have cut three times in less

than thirty years, and we cleaned up over 15,000,000 feet of lumber off of it, and now the land is worth fifty dollars an acre and it hasn't been cleared yet."

Selecting veneer logs is no easy task, and often the log buyer must spend a good deal of time in the log yard in order to secure enough figured timber to cut 20,000 to 40,000 feet of logs a day. Every figured log is a profitable possibility, but it should be recognized that in selecting such timber there is as much lottery about it as in buying a share in the Rio de Janeiro lottery, as even after a tree is cut you are not dead sure it is all right then. In the selection and putting on the market of high-grade veneers, no matter whether the wood is gum or oak or any other material, special care in getting the logs will not always prevent you from being thoroughly surprised at some defect cropping out that may be an expensive luxury. However, this business is growing rapidly and some of the best equipped plants in the South are being utilized to put this stock on the market, and the golden rule for success in an operation of this kind is everlasting watchfulness.

Fred Conn of the Bayou Land and Lumber Company, which has a large plant at Lindsay, Miss., in discussing the subject of car loading recently said they endeavored to get the maximum loading at all times, and he hoped the time would come when the railroads would have terminals, and cars and employes enough to take care of the country's needs.

C. A. Marsh of the Marsh & Truman Lumber Company, Chicago, spent several days in the Memphis territory. He reports plenty of business, but that it is necessary to put forth every effort to get delivery of stock. He states that Capt. Fletcher Marsh, who is in Uncle Sam's employ doing some special purchasing for the government, is having a busy time, but enjoys the work very much. Capt. Fletcher Marsh is an active young man, and no doubt will fill a big niche, because he is studious and digs into anything he has to do, and learns all about it.

It is a funny thing that we have to go through the same course of sprouts every year without learning any lesson from it. Shipping in transit of lumber if the market happens to be a little bit off or the demand not up as it should be for a few days is the curse of the industry. You can occasionally forgive a man when he has a paper to meet within thirty days and does not know how to get the money except by cutting the price, but I could never figure out how he can feel any assurance of getting the money when he lets loose of a car not knowing its destination, whether he will get a customer for it, or what he will get for it. If trade is a little slow, it is easy to understand how the buyer reasons that it is time for a reduced price. Either the manufacturers are scared, or the let-up in demand has made them anxious to move stock, and there is no chance to know how cheap it is going to sell. There is a lot of lumber sold each year by auctioneers, and they do more to "bust the market" than anyone else, and therefore why will a manufacturer continue to encourage the auctioneering off of his lumber in the big markets and thus add to his own grief?

The official family of the Chicago Mill & Lumber Company was well represented at the Helena operations this last month. Treasurer O'Connell, Manager Ed. Lang of the lumber department, and Secretary Chas. Wiedeman were all visiting their respective departments, and having a session with Manager Nelson of Helena and Vice-President Lang of Blytheville.

Among those included in Chicago visitors this past month was Mark Brown of Brown & Hackney, Inc., who was purchasing machinery and equipment for their new mill in Louisiana, where they will manufacture gum, ash, oak, and cypress. They have 6,000 acres of timberland back of Transylvania, and are building four miles of standard gauge railroad to reach same. The corporate name of this institution will be the Brown-Hackney Lumber Company, a Delaware corporation doing business in Louisiana. The officers of same will be: R. J. Hackney, president; M. H. Brown, vice-president and treasurer; J. C. Thompson, secretary. They will move their mill and operations from Mounds, Ark., where they have closed down, but still have about 2,000,000 feet in the yard.

R. H. Darnell, president of R. J. Darnell, Inc., always makes a trip

or two North each month. This last time he was visiting customers trying to see how they are fixed for the new year's supply. He is enthusiastic about the 1918 demands, especially on particular stock.

E. H. D.

Memphis Anxious Over Logs

The end of the year is close at hand and the railroads have not begun furnishing relief to lumber manufacturers. The Valley Log Loading Company of Memphis has stated, through its president, John W. Dickson, that it had loaded only 350 cars of logs this month for mills at Memphis and elsewhere on the Yazoo & Mississippi Valley line of the Illinois Central system, as against normal loading of 1,000 cars for the same period. This means that this company is securing about 33 per cent of the number of cars it ought to be receiving and the showing on the Yazoo & Mississippi Valley line is a great deal better than that on the Memphis-Marianna cut-off on the St. Louis, Iron Mountain & Southern, on which this firm operates, and on any other road running into Memphis. Bad weather has handicapped the company slightly in loading on the upper end of the Yazoo & Mississippi line, but three out of four of its loaders are working where there has been no snow, with the result that the shortage in loading is directly traceable to the lack of cars.

And, because of the lack of logs, hardwood production at Memphis and throughout the Memphis territory is only a fractional part of what it should be. The unprecedentedly heavy snow and extreme temperature prevailing for the past ten days have proven a serious handicap to lumber manufacturers, but the greatest with which they are having to contend is the lack of logs, directly traceable to the lack of cars. Everything considered, it is probably not overshooting the mark to say that for the past fortnight the amount of lumber manufactured in this part of the country has been the smallest for the corresponding period for more than ten years. Many of the mills did not operate at all last week and part of them are closed down now.

And yet it is stated on the authority of officials of the Valley Log Loading Company that there are 25,000,000 to 30,000,000 feet of timber awaiting transportation to Memphis from the delta alone and that there are 1,500,000 feet between the yards of the Illinois Central system at Nonconah, just south of the city, and Lake View, Miss., which will be subject to overflow this spring in the event of as high water as was experienced last year. Some firms have 1,000 to 2,000 cars of logs ready for delivery to their mills and no cars on which to move them. And all the pressure being brought to bear on the railroads is bringing no measure of relief.

Officials of the Southern Hardwood Traffic Association say that the railroads are not furnishing anything like 50 per cent of the requirements of the lumbermen in the way of cars for handling outbound shipments. And they report that, in the case of the Missouri Pacific system, lumbermen are being shut out altogether in the matter of box cars on the claim that, after priority shipments are taken care of, there are no box cars left. This road is furnishing box cars where government orders are concerned, but it is refusing box cars to lumbermen unless they have such orders. The association believes that the Missouri Pacific system is exceeding its authority in placing this construction on priority orders and it is making an effort now to bring about a recession from the position taken. But all the roads are short on equipment to such an extent that they are in no shape to meet the requirements of the lumbermen except in a most restricted way.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association, arrived in Washington December 20 to take part in the hearing before the Interstate Commerce Commission in the case involving higher rates and change of weights on lumber shipments to Pacific coast points. The association has already gone on record with a strong protest against the changes contemplated by the carriers.

The Mail Bag

B-1156—Wants Basswood Veneers

New Woodstock, N. Y., December 19. Editor HARDWOOD RECORD: We are in the market for a carload of 1/8 inch basswood veneer of a less quantity, and were advised by a traveling man for a lumber company that you might help us to locate some manufacturers of this material.

We could use it in widths of from 5 inches up and lengths from 10 inches up. This could be saved from veneer waste.

B-1157—Aprons Go Up to Twenty Cents

E. C. Atkins & Co., the silver steel saw people of Indianapolis, request HARDWOOD RECORD to publish the following letter which explains itself:

For years E. C. Atkins & Co. has been furnishing heavy canvas nail aprons to carpenters and mechanics for ten cents. Recent advances on the cost of these, necessitates our increasing our price to twenty cents apiece to pay for them. Kindly assist us in informing the general public through your publicity columns of this inasmuch as requests still pour in for aprons at the old price.

B-1158—Who Pays the Tax?

HARDWOOD RECORD is in receipt of the following communication from a prominent purchaser of lumber:

Chicago, Ill., December 19. Editor HARDWOOD RECORD: Could you inform us regarding the following: We buy several cars of lumber at a stated price f. o. b. team track Chicago (you will understand this is not sold f. o. b. mill with freight allowed) freight bill is rendered with 3 per cent war tax. When we remit for car the shipper objects to deducting the war tax. Please let us know who you consider should stand this, and oblige.

HARDWOOD RECORD believes that in this case the shipper should stand the tax. The lumber was sold for a certain specified price delivered at Chicago, and this price being agreed upon and there being no specific agreement that the purchaser should in this case pay the tax, it seems that the transaction so far as the terms are concerned, is closed with the acceptance on the above described terms.—EDITOR.

B-1159—Wants to Buy Quarter-Inch Maple

Brookline, Mass., December 18. Editor HARDWOOD RECORD: My people are in the market for 1/4" maple firsts and seconds and a little common, width 13" and up, length 12' and longer. Could you tell us who would be in position to get this out?

Anyone wishing to figure on this stock can have the name and address on application to HARDWOOD RECORD.—EDITOR.

B-1160—Has White Oak

Buffalo, N. Y., December 19. Editor HARDWOOD RECORD: We have accumulated at our Buffalo, N. Y., plant a large quantity of clear white oak pieces 5/8" to 1" thick x 2" and wider and running from 1' to 3' long, from working up kiln-dried lumber, and this stock should give good satisfaction where oak in small sizes is required. We will sell this oak very cheap and would like to get in touch with someone who can use it.

Clubs and Associations

Memphians Form Co-operative Body to Handle War Orders

Following a suggestion made at the meeting of the directors of the Gum Lumber Manufacturers' Association at Memphis, at which John M. Pritchard was lent to the Southern Hardwood Emergency Bureau, that the lumbermen of Memphis and the valley territory form an organization to co-operate with the bureau in seeing that the requirements of the government in the way of hardwood lumber are met promptly, about thirty manufacturers at Memphis held a meeting at the Tennessee Club last week during which the following committee was appointed to perfect plans looking to such co-operation:

John W. McClure, Belgrade Lumber Company, chairman; S. M. Nickey, Green River Lumber Company; James E. Stark, James E. Stark & Co., Inc.; Rudolph Sondheimer, E. Sondheimer Company, and B. F. Dulweber, Kraetzer Cured Lumber Company.

This committee, together with the lumbermen in this territory who are interested, will hold meetings every Tuesday at which luncheon will be served and at which plans will be discussed looking to the co-operation they desire to proffer.

The second meeting was held at the Hotel Gayoso, December 18, but nothing was given out for publication. Indeed, John McClure, chairman of the committee, expressed the view that publicity would defeat the very purpose the committee and the lumbermen are anxious to accomplish, with the result that there will be nothing further to give out in connection with these weekly meetings. They will be devoted wholly to discussing government orders and the best means of filling them, as well as all other essential phases thereof.

Want Precedence for Box Lumber Shipments

The board of governors of the Southern Hardwood Traffic Association, at the regular monthly meeting held at Memphis, December 18, decided to co-operate actively with the National Association of Box Manufacturers in securing preferential treatment, from a transportation standpoint, for lumber used in the manufacture of box shooks as well as for shooks themselves. It was pointed out that the box manufacturers do not receive their orders for shooks direct from the government and that they do not, therefore, know to what extent their output is used by the government. It was emphasized, in this connection, that the government is, indirectly, the largest buyer of wooden containers, including all sorts of standard packages, and that it is using these for handling ammunition and supplies for the soldiers in its armies and in the armies of its allies. It is therefore felt that, in view of the use to which these containers are put, there should be no delay whatever in manufacture or shipment delay which can be prevented only by giving priority to shipments of both the raw material and the finished product.

The board also entered a vigorous protest against the proposed changes in tariffs covering lumber shipments from Memphis to Pacific coast points, changes involving higher rates and a revision of weights as constituted at present. Furthermore, it sent J. H. Townshend, secretary-manager of the association, to Washington December 18, to enter protest with the Interstate Commerce Commission before which body this case was heard last week.

Buyers Paying Freight Tax

The Northern Hemlock and Hardwood Manufacturers' Association recently sent out inquiries to all its members to learn what success they were having with buyers as to the three per cent war tax on shipments, it being generally understood that the buyer must bear that cost. Based on responses from forty-five members of the association it is apparent, says Secretary O. T. Swan, that almost without exception the buyers have been impressed with the necessity of their bearing the tax. In some cases definite measures were necessary to bring the attention of the buyer to the fact that he would be required to pay the tax and in still a few cases the buyer has not decided that he thinks it just to exact the three per cent from him and therefore the subject still requires adjustment. Most interesting of the letters received by Mr. Swan are those indicating what means have been taken to bring the subject to the attention of the buyer. In a majority of cases this is being done by means of a rubber stamp notice being made on all invoices, the wording of which varies in most cases but the purport of which in each case is about the same viz: "Buyer to assume freight bill tax." In some cases the tax matter is referred to in quotations where such are requested and then again several firms have taken the precaution of sending out form letters or statements to all customers.

Another subject of general interest to the lumber trade is the fact that the Northern Hemlock and Hardwood Manufacturers' Association has sent out a circular statement to all members enclosing a report of the national committee on terms of sale asking what the attitude of the member would be on the question of their adoption. A summary of replies indicates that nearly eighty per cent of the members of the association have stated they will put these terms into effect provided at least 75 per cent of the members of the association have indicated that they intend to use these terms and provided they are adopted by at least 75 per cent of the other lumber associations of the United States.

Wisconsin Firms Will Deck More Logs

The Central Wisconsin Loggers' Association, at a meeting held in Wausau, Wis., recently, decided that the best-known means to meet the situation brought on by the acute shortage of cars and the general congestion of freight traffic will be to deck logs on skidways at sidings to a much greater extent than in previous years and distribute deliveries to the mills over a longer period. The idea is to avoid curtailing the winter's cut and make ample provision for log supplies as the sawing season advances. Many new sidings will be built along the main and logging railroads, and skidways filled while sleighing is good. The logs can then be loaded at various times during the season, as cars become available. Formerly the dearth of sidings made it imperative to move the logs as rapidly as they were cut, which resulted in a "peak load" on railroad facilities at a time when all other interests were demanding similar accommodations.

Resolutions were adopted providing for the flying of the national colors at the members' logging camps, extending the best wishes of the association to the forestry regiments serving abroad, supporting the President in any measures he may deem necessary to accomplish the co-ordination of resources of men, money and material in the most efficient manner possible, pledging the unqualified co-operation and loyalty to the government and finally urging representatives in Congress to support the constitutional amendment for national prohibition.

Evansville Club Elects Officers

The Evansville Club Lumbermen's Club at its regular monthly meeting held Tuesday, December 11, elected the following officers to serve the ensuing year:

PRESIDENT—George O. Worland, Evansville Veneer Company.
VICE PRESIDENT—Charles A. Wolflin, Wolflin West Side Lumber Company.
SECRETARY-TREASURER—William S. Partington, Maley & Wertz.
DIRECTORS—Joseph W. Waltman, J. W. Waltman Lumber Company, Daniel Wertz, Maley & Wertz, and J. C. Greer, J. C. Greer Lumber Company.

President Worland has announced the following standing committees for the ensuing year:

MEMBERSHIP COMMITTEE—Charles A. Wolflin, chairman; Daniel Wertz and Henry Kellner.
PURITY AND RESOLUTIONS COMMITTEE—William B. Carlton, chairman; Joseph W. Waltman and John C. Keller.
RIAR AND RAIL COMMITTEE—William S. Partington, chairman; John C. Keller and Frank M. Cutsinger.
ENTERTAINMENT COMMITTEE—William S. Partington, chairman; Elmer D. Lubbing and J. C. Greer.
CO-OPERATIVE COMMITTEE—Daniel Wertz, chairman; Anton Brucken and Louis Holtman.

Mr. Worland has served during the past year as president, and his reelection was a deserved compliment to him. He was the unanimous choice of the club for reelection. Mr. Partington, who has made a most efficient secretary and treasurer, was also re-elected. Mr. Partington was first elected to the position several months ago when Mertice E. Taylor resigned and severed his connection with the lumber industry.

McSweyn Heads Memphis Club

J. F. McSweyn of the Memphis Band Mill Company, known affectionately as the "grand old man of South Memphis," will preside over the Lumbermen's Club of Memphis during the ensuing year. He defeated Earl Palmer of the Ferguson & Palmer Company, Inc., in the race for the presidency of this organization at the annual election held at the Chamber of Commerce December 15. Other officers and directors elected at the same time are:

FIRST VICE-PRESIDENT—M. B. Cooper, Three States Lumber Company.
SECOND VICE-PRESIDENT—D. F. Heuer, A. N. Thompson Lumber Company.

SECRETARY-TREASURER—J. S. Williford, Bellgrade Lumber Company.
DIRECTORS—W. C. Bonner, J. H. Bonner & Sons, E. L. McLallen, Nickey Brothers, Inc., and Richard Petrus, Stinson Veneer & Lumber Company.

For the first time in the history of the club, the Red and Blue tickets elected exactly the same number of candidates, thus splitting honors 50—50.

The election was characterized by much enthusiasm. The campaign was warm, but it was conducted in the most friendly spirit, with the result that all members have been brought into closer touch with each other and are thus better prepared for the increased opportunities lying before the club.

Mr. McSweyn denied that he was anything of a speech-maker, but declared that he had a very warm heart and that his gratitude to his committee and to his many friends who voted for him was unbounded. He pledged his best efforts in behalf of the club and asserted that his administration would be a success because he was sure that he would receive the unqualified support of every member of the organization to that end.

Earl Palmer said he was glad his opponent had been elected because the

latter deserved the compliment. He entertained the club for several minutes with stories full of humor but, speaking seriously, said: "I want to give the new administration all the support I can. And I hope that the club will take a brace on itself along civic lines. We ought to be a little more forward. We owe it to ourselves and to the city to do so. We have not been taking proper part in civic affairs. We have been rather too clannish. We have other obligations than those to each other, and we ought to make our influence in the community felt in a more positive and more powerful manner."

M. B. Cooper declared, after expressing his appreciation of the honor given him, that the club had a greater work than ever before it, because of war conditions, and expressed the hope that, in service and sacrifice, it would rise to both the occasion and the opportunity.

J. H. Hines, defeated for the first vice-presidency, showed that his interest in the club was not the least impaired. On the contrary, he believed in more aggressive tactics and more positive accomplishments along much the same lines as laid down by Mr. Palmer. "We, representing the lumber interests, stand among the largest institutions in this city and should do a much larger part than heretofore. We have probably not done ten per cent of what we could have done. Our opportunity, under war conditions, is greater than ever before, and I hope that the club will move forward with all the impetus at its command."

D. F. Heuer spoke very briefly, but his election brought a very interesting character to the platform. R. J. Hackney of Brown & Hackney, Inc., his opponent. Mr. Hackney declared that all the lumbermen he approached for votes displayed "brutal frankness" in telling him they could not do so. He also declared that Douglas Heuer had more fathers than any other man in Memphis, as the majority of the lumbermen claimed to have raised him. Mr. Hackney also asserted that those who, after being defeated, said they had enjoyed the race had a "very vague idea of fun."

W. C. Bonner promised that he would develop "some speed" in the race despite his abnormal size, and he said that his victory proved that he had lived up to his pre-campaign pledge.

Mr. Williford, who was nominated on both tickets, could not feign surprise over his election, but he was none the less happy on that account.

President Ralph May occupied the chair and called out the names of the successful candidates.

Before the votes were counted the floor was given to Dr. Lillian Johnson and Mrs. E. Sondheimer, who made a brief plea for contributions from the lumbermen in behalf of the Young Women's Christian Association, which will establish hostess houses at the cantonment and do other work in behalf of the soldiers. The lumbermen subscribed \$400, and then a committee was appointed which agreed to underwrite \$1,000 for the club. Before adjournment \$250 more was obtained, so that only \$350 remains to be secured. The lumbermen recently subscribed about \$8,000 to the Y. M. C. A. war fund.

President May, on behalf of the members, presented Miss Florence Corrington, assistant secretary, with a purse of \$120. She responded very briefly: "I thank all of you and love each one of you."

The newly elected officers will be installed at the first meeting in January. The retiring officers will make their annual reports at the same time.

The attendance was very large. Refreshments were served during the evening and a splendid band added to the pleasure of the occasion.

J. F. MCSWEYN
Newly Elected President Memphis Lumbermen's Club

G. O. WORLAND
Re-elected President Evansville Lumbermen's Club

M. B. COOPER
First Vice-President Memphis Lumbermen's Club

Baltimore Exchange to Have Permanent Quarters

President Parker D. Dix of the Baltimore Lumber Exchange, has appointed the standing committees for the ensuing year as follows:

ARBITRATION AND GRIEVANCE—Lewis Dill, Lewis Dill & Co., chairman; Theodore Mottu, Theodore Mottu & Co.; John L. Alcock, John L. Alcock & Co.; Henry D. Dreyer, Henry D. Dreyer & Co., and Ridgeway Merryman.

INSPECTION—Ridgeway Merryman, W. Hunter Edwards, B. W. Edwards & Sons; F. A. Ascherfeld, James Lumber Company.

MEMBERSHIP—Theodore Mottu, David M. Wolf, Canton Lumber Company, and John L. Alcock.

LEGISLATION AND TRANSPORTATION—John L. Alcock, chairman; Rufus K. Goodenow, Canton Box Company; Pembroke M. Womble, F. A. Ascherfeld and Lewis Dill.

HARDWOODS—Daniel MacLea, MacLea Lumber Company, chairman; John H. Zouck and John J. Kidd, Kidd & Buckingham Company.

HOUSE—Rufus K. Goodenow, chairman; Pembroke M. Womble and Lewis Dill.

In accordance with the recommendation contained in the president's annual address, that the exchange secure a permanent meeting place, where the members might assemble frequently and where matters affecting the lumber trade could always be discussed, a special committee was named to secure such headquarters.

Alluvial Association Loses Schoffelmayer

Through the appointment of Victor H. Schoffelmayer to the position of agricultural investigator and field editor of the Dallas *Farm News*, the Southern Alluvial Land Association, Memphis, loses its field secretary. Mr. Schoffelmayer will enter on his new duties January 1. He was an active force in the recent agricultural development and the colonization of the alluvial lands of eastern Arkansas, the Yazoo delta and eastern Louisiana. His recent booklet, "The Call of the Alluvial Empire," has had wide distribution in the East, West and North.

Mr. Schoffelmayer is familiar with Texas and the Southwest, having studied agricultural conditions there for several years while editor of the *Southwest Trail*, the official agricultural publication of the Rock Island Lines, Chicago. He was formerly associated in this work with H. M. Cottrell, now agriculturist of the Tri-State Farm Bureau at Memphis. Mr. Schoffelmayer will have full charge of his paper's agricultural activities in Texas and will write series of articles based upon close observation and intended to promote better farming and greater crop production.

Wisconsin Loggers Organize

A permanent organization of the Northeastern Wisconsin and Upper Peninsula Loggers' Association was perfected at a meeting held, Saturday, December 8, at Marinette, Wis., at which time the following officers were elected: President, John Gleason, Wis.; vice-president, Lewis Harmon, Wells, Mich.; secretary and treasurer, S. D. Switzer, Wabeno. Meetings will be held regularly, it being planned to confer next at Escanaba, Mich., in about two months. Membership is open to any manufacturer or jobber handling one or more millions of feet of log input a year. The main address of the meeting was delivered by E. J. Luther, representing the Wisconsin Council of Defense, who urged conservation of all resources and food, especially of meat and wheat. Accordingly the association voted to observe meatless and wheatless days in all of their camps. In the general discussion it was brought out that in Forest county the log input would be about twenty-five per cent greater than last year while in other districts a contrary condition would prevail and the amount of timber would be less than last year due almost entirely to the shortage of labor. As far as weather conditions are concerned it was stated that these could not be better.

St. Louis Exchange Elects Officers

The annual election of the Lumbermen's Exchange of St. Louis took place at the headquarters of the exchange, on December 4.

The result in the Hardwood Division (B) was as follows:

CHAIRMAN—E. H. Luehrmann, C. F. Luehrmann Hardwood Lumber Company.

VICE-CHAIRMAN—Frank Waldstein, Waldstein Lumber Company.

REPRESENTATIVE DIRECTOR—Thos. E. Powe, Thos. E. Powe Lumber Company.

FIRST VICE-REPRESENTATIVE DIRECTOR—E. W. Wiese, Thomas & Proetz Lumber Company.

SECOND VICE-REPRESENTATIVE DIRECTOR—W. P. Anderson, Gideon-Anderson Lumber & Mercantile Company.

Division A, retailers, and Division C, yellow pine manufacturers, also elected their respective officers.

The arbitration and appeals committees, elected by the vote of members, was as follows:

ARBITRATION COMMITTEE—I. R. L. Wiles, chairman, O'Neil-Wiles Lumber Company, C. K. McClure, W. P. Anderson, A. R. Fathman, W. J. Yardley, A. E. Smart.

APPEALS COMMITTEE—F. C. Brewer, chairman, A. P. Brewer Lumber Company, Fred Moehlenbreck, Franz Waldstein, J. A. Meyer, P. R. Walsh, G. P. Hospes.

President Poe will call a meeting shortly, when the president for the coming year will be named.

Scrap of Big Timber History

All the big timbers in the world's history have not been produced on the Pacific coast in recent years. There is record of a stick of bridge timber used in repairing a bridge 1,900 years ago in Italy. The stick was two feet square and 120 feet long. It compares favorably with some of the Douglas fir big pieces. The Italian timber was described as fir, but it was the custom of that time to call all softwoods fir if they were not cedar. It was probably a pine log.

Trying to Advance Memphis-Pacific Rates

It is reported that the Interstate Commerce Commission is attempting an advance of 10 cents per hundred pounds on the Pacific coast rate from Memphis to Portland, by cancelling the recently made tariff of 60 cents per hundred pounds on a minimum weight of 60,000 pounds. There is a rate of 70 cents on material weight of 10,000 pounds and this rate will prevail, without regard to how much more than 10,000 pounds each car may contain, thus making an advance of 10 cents per hundred pounds, provided the Interstate Commerce Commission approves.

The Southern Hardwood Traffic Association has been doing excellent work in enabling southern hardwood manufacturers to compete successfully with Japanese oak in the rich states along the Pacific coast and it succeeded in getting the 60-cent rate on 60,000 pounds. Since that time manufacturers of oak have been able to regain considerable Pacific coast business they had lost to the Japanese and they are opposing the proposed increase in rates principally because they will again lose this Pacific coast business. They cannot compete with the Japanese on the basis of the higher rates and this accounts for the intense opposition there is to the proposed increase.

Traffic Association to Elect Officers

The annual election of officers of the Southern Hardwood Traffic Association will be held in Memphis some time during the second week in January.

The board of governors at the meeting held at Memphis December 18 appointed the following nominating committee: Flats—O. M. Krebs, chairman; R. J. Hackney and S. C. Major, Boxes—George C. Ehemath, chairman; F. W. Dugan and H. H. Alexander.

It has been customary heretofore for these nominating committees to agree on the same gentlemen for the various offices and it is expected that this plan will be followed this year.

The annual election will take place one week before the annual meeting of this body, or about January 11. The annual meeting is scheduled for January 18.

With the Trade

John B. Ransom & Company Acquire Big Tract

A deal by which John B. Ransom & Co., Nashville, Tenn., have acquired the timber on the holdings of the Bon Air Coal & Iron Corporation was recently completed, according to announcement made from the offices of these two enterprising corporations. The deal involves all the timber on the land owned by the Bon Air Coal & Iron Corporation in Wayne, Perry, Lawrence, Lewis and Hickman counties, comprising in all some 82,000 acres, of which 45,000 acres are absolutely virgin timber.

This body of timber is probably the largest tract of virgin hardwoods of anything like the same quality and accessibility left in the United States. It is valued at several million dollars and is estimated to contain more than 150,000,000 feet of merchantable timber; over half a million cross-ties; thousands of cords of dye-wood and tan-bark, and many thousand telephone and telegraph poles, for which there is a very insistent demand. While these are the principal products, there are also numerous by-products, including a quarter of a million cords of firewood. This timber lies for the most part between Collinwood, Tenn., on the Tennessee Western railroad and Allen's Creek on the N. C. & St. L. Railway.

It is the plan of John B. Ransom & Co. to completely develop this big virgin forest, leaving it practically clear of forest growth and ready for agricultural development, to which the land is admirably adapted, as is evidenced by farms which at numerous places now adjoin this tract, and on which even by the methods now employed excellent crops are raised. Most of this vast tract is also ore-bearing and leaves the Bon Air Coal & Iron Corporation with its iron ore and phosphate lands intact, on which the large developments it now has under way may be continued indefinitely.

The timber acquired by John B. Ransom & Co. consists largely of white oak, poplar and hickory, woods in the manufacture and sale of which this company specializes. The acquisition of this timber is a distinct compliment to Nashville enterprise.

The sale was made after several of the largest lumber consuming corporations in the country had negotiated for the purchase of this timber. Through its two box factories, planing mill and subsidiary flooring and furniture factories, John B. Ransom & Co., already have a market in Nashville for some fifty per cent of the yearly output of the new development.

A Nashville man, Cecil Ewing, formerly for eight years managing editor of the *Southern Lumberman* of this city, and later for a short while connected with the Broadway National bank, is general manager of this new development for John B. Ransom & Co., and has actively assumed his duties with headquarters for the present at Collinwood, Tenn.

Several large sawmills will be put in operation in the timber at once, and the most up-to-date and scientific methods of logging and manufacture will be employed throughout the entire operation, which will require ten or twelve years to complete.

Modern Hardwood Operations

Nickey Brothers, Inc., Memphis, Tenn.

The plant of Nickey Brothers, Inc., at Memphis, Tenn., covers 1,000,000 sq. ft. of sawed and shod veneers, and 1,000,000 sq. ft. of hardwood lumber, the latter being principally oak from regions producing as fine oak timber as grows in the South or anywhere else. The veneers come from a number of woods, all of exceptional value, the principal species being oak, gum, walnut, ash, poplar, and holly.

The popular saying that "the better the land, the better the timber" holds true in this case. The timberlands of the Nickey Brothers, Inc., are situated in southern Arkansas, and from there come practically all the logs which go through their mill. The reputation of the timber is high, and the excellent manner of manufacture increases the reputation of the products. The owners are justly enthusiastic over the prospects which the future holds in store for gum veneers in general and for theirs in particular. The rich figure brought out by manufacturing their gum is phenomenal, and present popularity is bound to increase, for their lands grow only the highest grades of timber. Expensive pianos and the best class of furniture are made from the gum veneers produced by their mill at Memphis; and these veneers hold their own in competition with some of the more costly hardwoods imported from other countries.

The success which has attended the Nickey Brothers' products in the markets has not been due to accident, nor is it wholly due to the superior class of timber which they use. Much of the success is the logical result of careful and intelligent manufacturing at the mill. It is possible to spoil the best wood by bad workmanship at the mill; but that does not happen at the Nickey Brothers' plant. They are well organized, have competent management, good machinery, and efficient labor, and these are bound to produce satisfactory results in the conversion of good raw material.

Nickey Bros., Inc., are capitalized at \$200,000, with S. M. Nickey, president; W. E. Nickey, vice-president; E. L. McLellan, Jr., secretary-treasurer, and R. O. Martin, manager. Mr. McLellan has supervision of the plant, and Mr. Martin is in charge of the office and sales, while the general supervision of operations is in the hands of the president and vice-president. The active managers are young men with plenty of push and enthusiasm as well as possessors of thorough knowledge of timber and the production of merchantable forest products in their line.

The plant at Memphis is equipped with the best machinery to be had. Nothing is slighted for want of equipment, and the excellent condition of

machines and apparatus may be noted in a casual inspection of the plant.

The office creates an excellent impression, as all offices should, for it is here that the visitor is introduced to the plant. The new modern office of Nickey Brothers, Inc., which is in proximity to their plant, gives a good idea of the class of products manufactured within the walls. The outside finish is stucco, while the interior displays many kinds of veneers manufactured on the premises. Quartered oak railings divide the main office into compartments, and to the right are three private offices, each 12 by 14 feet. The first is Mr. Martin's office and is finished in figured

red gum, natural, and displays this fine wood to good advantage. The second office is Mr. McLellan's, and its finish is American walnut; while the third is occupied by S. B. Speight, traffic manager. The finish here is plain gum. The directors' office and guest room is finished in fumed quartered white oak with raised panels, and at the east end of the room an artistic fireplace adds to the pleasing effect.

There is likewise a sun parlor and lunch room for the office employes, of whom there are always a dozen or more. The men's lavatory is finished in white enamel, and the women's rest room in what is called waxed walnut gum. All the veneers used in this fine finishing were manufactured in the plant.

The excellent taste shown in the office finish has received many favorable comments, and visitors to Memphis and others in any way interested in veneers are well paid by a visit to the offices of the Nickey plant, as it is a practical exhibition of the veneers employed for interior finish, and it likewise bespeaks up-to-date ideas in the arrangement and construction of a modern business office.

The company employs from 175 to 200 persons; its principal wareroom is 132 feet wide and 164 long;

and one of the show-objects of the plant is the 216 inch knife at work turning out sheets of veneer.

In a measure it might be said that the success attending the business of Nickey Brothers, Inc., is due to the fact that its principals are men who have been unusually successful in developing other organizations having to do with the manufacture of hardwood lumber. In addition to the direct value of their own experience they have that very essential business qualification—the ability to pick for their associates men who are capable of living up to the high standards set by the older men. The Nickeyes, who also operate the Green River Lumber Company at Memphis, are products of the Indiana hardwood field in which they operated with marked success in years gone by.

CAN YOU BEAT THIS FIGURED GUM?

A SMALL PART OF THE STORE ROOM—THIS STOCK OF PLAIN AND FIGURED GUM AND OAK VENEERS IS COMPLETE.

Old St. Louis Firms Liquidates

The C. F. Liebke Hardwood Mill & Lumber Company, which is one of the oldest lumber concerns in the country and which, since the death of C. F. Liebke, the president and founder, several years ago, has been operated by the three sons of that gentleman, Frank J., Paul Y., and Joseph Liebke, is in course of liquidation.

Having formed a new company, the Liebke Lumber Company, incorporated under the Missouri laws with a capital of \$100,000, the three brothers decided to discontinue the old company, hence its liquidation. The new company will have a mill at Plaquemine, La., which will manufacture ash and cypress lumber for distribution through their office in St. Louis.

Pertinent Information

Foreign Business Opportunity

The daily commerce report for December 14, sent out from the Bureau of Foreign and Domestic Commerce, Washington, makes notation of a man in France who wishes to be placed in communication with American manufacturers and exporters of strong, light, woods for veneering. Those who wish to take this matter up with the bureau in Washington should refer to it as No. 26065.

Poor Market for Ginseng

Lumbermen should not leave off their log cutting to dig ginseng this year, for the bottom has dropped out of the Chinese market. Latest reports show that sales of the root have been made at less than half former prices. Disturbed conditions in China are assigned as the cause of the slump. The market is in that country, but the principal supply comes from the hardwood region of the United States.

Meeting the Dye Demand

When the war cut off the importation of dyes from Germany, the people of the United States went to work in earnest to develop the dye industry here. We had raw materials in the form of bark, roots, and vegetables of many kinds, and also plenty of material for coal tar dyes. The latest figures show that our dye manufacturers have solved the problem and are now supplying all the dyes our people need. The manufacture of dyes should not be allowed to depart from the United States after the war.

Only Patriots Need Apply

The Minneapolis Journal says that the local hardwood dealers of that city are on record as refusing to support any man for public office who has not a clean record for loyalty to the cause of America in the war. Resolutions adopted at the annual meeting of the Northwestern Hardwood Lumbermen's Association recently, tendered the earnest support of its members to the government in every way, and promised that they would help to suppress disloyalty in any form. The members resolved further, "that in the selection for office of any public servant, be it national, state, county, city or school, we pledge ourselves to support only such officers as are loyal to the government and obey the laws of our land." The resolutions further deprecated labor controversies at this time.

Big Spruce Shipments from Baltimore

The outstanding feature of the report of exports of lumber for November is the heavy shipment of spruce that has been going through this port. The quantity was not less than 2,958,000 feet, which is far in excess of even the heaviest previous months, and constitutes a record that may stand a long time. This movement made up virtually the entire volume of the foreign business, other items being small, though manufacturers of hardwoods, such as implement handles and "other manufactures of wood," figure in the exhibit to a degree that suggests prospects of a material expansion in such forwardings. Oak also commanded a degree of attention that is calculated to revive expectations of a return to former conditions of supply, and indicates that the assortments on the other side must have become greatly depleted, to insure so large a movement, as compared with some other months, when oak did not figure in the list at all.

Timber Sales on National Forests Doubled in Last Year

Sales of national forest timber in the fiscal year 1917 were more than double those of 1916, according to the annual report of the forester. The total amount sold exceeded 2,000,000,000 feet and is valued at more than \$3,715,000. During the same period about 727,000,000 feet were cut and removed, for which the purchasers paid \$1,507,303 into the federal treasury. The largest sales were made in Oregon, where about 688,000,000 board feet were disposed of.

In addition to the timber sold, approximately 113,000,000 board feet, valued at almost \$150,000, was cut under free use permit by more than 41,000 settlers living near the national forests and depending on the forests for firewood and building material to improve their homesteads.

The timber business on the eastern purchase areas, while still small as compared with the western forests, showed a decided increase, the report states. More than three times as much timber was sold and more than twice as much cut as in 1916. The material disposed of, it is pointed out, is largely of poor quality and its removal will improve the forest growth.

Interstate Commerce Commission Matters

The Interstate Commerce Commission has set the lumber reclassification case for argument before it in Washington, January 18.

Fifteenth Section Application No. 417 has, by direction of the commission, been consolidated with L. & S. Docket 1148 and Docket 9925, which were assigned for hearing before Examiner Bell on December 20. This application was filed on behalf of the Atlantic Coast Line Railroad and others, and covers a proposed revision of rates on lumber and other forest products from Carolina and Virginia points to central freight association and other territories, generally to reestablish pre-existing sixth-class relationship disturbed by class rate increases authorized in the commission's order in case No. 57 (ex parte), also cancellation of certain proportional rates from the Virginia gateways to Buffalo, Pittsburgh, etc., via the Chesapeake & Ohio and Norfolk & Western railways, further necessity for such rates proposed to be obliterated by above mentioned revision.

The commission has awarded reparation of \$381.50 to the Himmelberger-Harrison Lumber Company in its complaint against the Iron Mountain railway on account of unreasonable rates on 41 carloads of rough hardwood lumber shipped from Okalona, Okla., to Morehouse, Mo., there unloaded, sorted, squared and stacked in transit and reshipped to St. Louis and other destinations.

Hardwood and cypress lumber shipped from the South to Sioux City, La., should get better treatment from the railroads as a result of the Interstate Commerce Commission's decision in the complaint of the traffic bureau of the Sioux City Commercial Club against the Alexandria & Western Railway Company et al.

The commission holds that "rates on lumber and other forest products, other than yellow pine, from points in Missouri, Oklahoma, Arkansas, Texas, Louisiana, Tennessee, Mississippi and Alabama to Sioux City are found to be unduly prejudicial to the extent that they exceed by more than 2 cents per 100 pounds the rates contemporaneously maintained from the same points of origin to Omaha, Neb."

Complainants contended that in no instance should the rate to Sioux City exceed the rate to Omaha by more than 2 cents and that from the furthest southern producing points the spread should be one cent. The differences complained of in some cases amounted to 7½ cents.

The commission's order in this case to carry out the decision indicated above is to be effective February 15 and for two years thereafter.

Judge Lovett, the priority dictator, has issued another order to the railroads of the country under the priority shipment law, which is broader than his former orders for priority handling of freight.

The commission has received the following additional applications for approval of carriers' tariff, proposing practically rate increases on lumber, etc.

G. K. Caldwell, chairman, Fourth Section Traffic Committee of Southern Commissioners, revision of rates on furniture and furniture material and many other things.

2293 Boston & Maine R. R. Cancellation of the arrangement for loading lumber, shingles, lath and other carload freight at Boston Mass., published in item 16 of tariff I. C. C. No. A-1783; non application of the arrangement provided in same item and tariff involving hay and straw in connection with other than reloading by carrier from hay sheds.

287 Maine Central R. R. Co. Increase in c. l. minimum weight in connection with the rates on lumber from East Hereford, P. Q., to Montreal, P. Q., published in tariff I. C. C. No. C-2337.

1993 (Revised) E. B. Boyd, Agent.—Amending application posted December 1, 1917, to increase c. l. minimum weight on lumber and other forest products as shown in I. C. C. No. A-638 (W. T. L. Circular No. 1-M) to 40,000 pounds, by excepting shingles, sash, doors and blinds; cedar posts, poles and piling, tan bark and shingle tow, continuing present minimum on these articles.

2175—Chicago, St. Paul, Minneapolis & Omaha Ry.—Cancellation of the rate on rough stakes, C. L., from Hughey to Stanley, Wis., published in tariff I. C. C. No. 4024 (GFD No. 2400-B), combination rates thereafter to apply.

2176 Chicago, St. Paul, Minneapolis & Omaha Ry.—Increases from 9½ to 10 cents per 100 pounds in the tie carload rates from Ashfield and Bayfield, to Greenwood or Owen, Wis., published in tariff I. C. C. No. 4024 (GFD No. 2400-B).

2177 Chicago, St. Paul, Minneapolis & Omaha Ry.—Cancellation of commodity rate on steel tanks, K. D., and wooden tanks or vats, S. U., from Ashland to Barksdale, Wis., published in tariff I. C. C. No. 4054 (GFD 4500) class rates thereafter to apply.

428 Nashville, Chattanooga & St. Louis Ry. Increases in rates on lumber and other forest products from Nashville, Chattanooga & St. Louis Ry., Western & Atlantic R. R., Birmingham & Northwestern Ry. and Rome & Northern R. R. stations to certain points north and west of Ohio and Mississippi Rivers, published in tariff I. C. C. No. 2206-A (Northern and Western Lumber Tariff No. 3).

258 L. E. Chaloner, Agent.—Increases of 1 cent per 100 pounds in lumber rates from A. T. & N. Ry. stations, Fairford, Ala., to Millry, Ala., inclusive, to Ohio and Mississippi River crossings, published in tariff I. C. C. No. A-95 (West Bound Lumber Tariff No. 2).

260 New Orleans, Texas & Mexico Ry.—Increases ranging from .2 cents to 2 cents per 100 pounds in lumber rates from certain points in Louisiana to points in C. F. A. and Buffalo-Pittsburgh Territory, published in tariff I. C. C. No. A-233 (Tariff No. 1000-A).

2229 Muskegon, Marquette & Southeastern Ry.—Increase from \$1 to \$4 per car in the switching charge between the Duluth, South Shore & Atlantic Ry. transfer and the plants of the Consolidated Fuel & Lumber Company, the Lake Shore Engine Works and the E. J. Longyear Company at Marquette, Mich., published in M. M. & S. E. Ry. I. C. C. No. 41.

401 The Delaware, Lackawanna & Western R. R. Co.—Cancellation of rates on lumber and other forest products from Solon, East Freetown, White's Mills, Gee Brook and Cincinnati, N. Y., to Lehigh Valley R. R. stations, Auburn, Berkshire, Groton, McLean, Richmond, East Ithaca and Brossport, N. Y., published in tariff I. C. C. No. 11970.

304 The Delaware, Lackawanna & Western R. R. Co.—Increase of 32 cents per ton of 2,000 pounds in lumber rates from Heart Lake Tiffany and Montrose, Pa., to certain stations on the Central R. R. of New Jersey, published in tariff I. C. C. No. 13341.

Log Rafts to Cross the Atlantic

Not much is being said about it, but a log raft that will saw 1,250,000 feet of lumber is about to start from an Atlantic port to cross to Europe. There is nothing phenomenal in the size of the raft, nor is there much doubt that it will safely cross the ocean. Larger rafts have made long voyages on the Pacific ocean, and the Atlantic presents no greater difficulties. The towing of such rafts will lessen the demand for ships. The cost of the chains and other appliances used in the construction of the raft is \$30,000; but the same material can be used again and again. The rafts cannot be destroyed by submarines.

Building Permits for November

Building construction for November was in actual volume perhaps less than one-half that for November, 1916. In estimated value, the building permits issued during the month in 114 principal cities of the country decreased 40 per cent. Making allowance for the higher costs of construction this year, the actual shrinkage is probably in excess of 50 per cent. The official figures of permits issued in these 114 cities, as received by the *American Contractor*, Chicago, total 843,504,682, as compared with 872,097,683 for November last year. In 32 of the 114 cities there are comparative gains.

Perhaps the most serious phase of this unfavorable showing is that present construction is not keeping up with requirements. In ordinary times building in many centers may be just a little ahead of current demand, but as a general rule the law of supply and demand applies. That law of supply and demand is now suspended by the abnormal business conditions, so that, generally speaking, the current construction work is far behind the actual necessities. This is clearly shown by the permits in cities, where there is a severe famine in houses. At Washington, for example, where there is great scarcity of houses, the building permits issued in November fell slightly below those of a year previous. And in Philadelphia, Newark, N. J., Bridgeport, Conn., and scores of other cities, where houses are greatly needed, a blight has fallen upon new construction. This shows that housing conditions are rapidly tending to become worse and that one of the vital American questions will soon be how can the construction of a sufficient number of houses be brought about?

The total number of buildings for which permits were issued in 114 cities in November was 16,128, as compared with 23,456 for November, last year.

Statistics on Wood Exports

During September last, the total value of forest products exported from the United States to all countries was \$5,776,323. For the corresponding month in 1916 the value was \$5,679,642, showing a slight gain in the exports of this year over those of last, based on September figures. For the nine months ending with September, the value of exports was as follows: 1917, \$47,583,197; 1916, \$45,315,996; 1915, \$40,333,291. The gradual increase during the corresponding periods in three years is due more to advance in value than increase in quantity.

Misunderstanding Regrading New Buildings

Reports have reached lumbermen in many parts of the country that the Chamber of Commerce of the United States advocates the suspension of dwelling-house building during the course of the war, and that a bulletin containing that advice has been widely distributed. It appears that the matter has been misunderstood, as shown in the following extract from a letter written to a lumber company in Wisconsin by Secretary Goodwin of the national chamber:

We have not urged any one to discontinue building during the continuance of the war. Possibly the statement to which you refer originated in misinterpretation of War Bulletin No. 26 issued by our committee on co-operation with the Council of National Defense. Our committee was merely pursuing its general purpose of placing before our members authoritatively the position it found in official quarters. The reference of the committee was to new enterprise of any kind. A test as to the advisability of new enterprises had been suggested by the Council of National Defense. The importance of applying this test was emphasized by our committee. We assume that no thoughtful business man differs regarding the advisability of the use of the test in question.

It is our hope that the government will not find it necessary to state that any article or any activity is unessential in a time of war. After many conferences with officials we feel confident that we can say there is not in contemplation any such list of non-essential articles or industries as has been mentioned in frequent rumors. Responsible officials now apparently plan to make decisions about the preference of one industry, or one article, over another, only when there is a shortage of materials, etc. When the shortage is past even the article or industry of least preference will thus be in a position to obtain its supplies and continue.

Pushing Foreign Trade

A year ago the Bureau of Foreign and Domestic Commerce, Washington, D. C., had thirteen special agents traveling in foreign countries for the purpose of studying the markets and looking out for opportunities for expanding American business. Today that force has been doubled. This expansion gives a hint of the value placed on our foreign commerce, not only during the war, but afterward. We are looking for all possible opportunities to push our commerce, and the foundation is being laid while the war is still being fought, because it will be a mighty busy time after the war ends, provided it ends in victory for the United States, which is the only conclusion to which the business men of this country look forward. The trade agent's work can be made particularly effective at this time. A thorough survey of the whole business world will enable our traders to take quick advantage of every opportunity.

Women to Plant Forest Trees

Women are being trained to take charge of the planting of forest trees in England. The foresters of that country have on hand 1,000,000 trees which must be planted this year or they will be a total loss, and there are no foresters to oversee the work. Special training and instructions are being given women to fit them to undertake this work for land owners who have ground ready for planting.

Tariff Commission's Report

The United States Tariff Commission, which was organized for work April 1, 1917, has just submitted to Congress its first annual report. The commission is charged with the investigation of the administration and the fiscal and industrial effects of the customs laws of this country, including their relation not only to the Federal revenue but to the industries of the country. It has power, further, to investigate commercial treaties, preferential agreements and economic alliances, and the conditions and causes affecting the competition of foreign industries with those of the United States. During the short time the commission has been at work it has not had opportunity to do much more than look the field over and see in what quarter constructive work can be done. Particular study is being given to the subject of trade after the war. Complicated problems will have to be worked out in order that the United States may hold its old ground and gain new.

Hardwood News Notes

< MISCELLANEOUS >

The Southern Car Company, High Point, N. C., has filed an involuntary petition in bankruptcy.

Fire losses are reported as having suffered by the M. R. Flooring Company, the Manhattan Woodworking Company and the New York Carved Moulding Company, all located in New York City.

J. L. Johns has sold his interest in the Plumbers Woodwork Company of Algoma, Wis.

The Henderson Wagon Works is closing out its business at Henderson, Ky.

The Dymond Colonial Company, Ltd., Strathroy, Ont., has been succeeded by the Middlesex Furniture Company, Ltd., an incorporated concern.

The Thomas E. Coale Lumber Company, Philadelphia, Pa., has re-incorporated under Pennsylvania laws, its capital being \$100,000.

The Elk Furniture Company is settling with its creditors at sixty per cent, and the Peacock Furniture Company, both of Lexington, N. C., offering its creditors a fifty per cent settlement.

An increase in capital stock to \$200,000 has been effected by the Empire Chair Company, Johnson City, Tenn.

With a \$50,000 capital, the Maple Ridge Manufacturing Company has incorporated at Rock, Mich.

The Grand Wood Turning Company, located in New York City, has incorporated at \$5,000.

At St. Louis, Mo., the Western Veneer Products Company and the R. N. Collins Vehicle Woodwork Company has been incorporated, the former with a capital of \$100,000 and the latter \$150,000.

< CHICAGO >

The South Side Stair Company, Chicago, has filed an involuntary petition in bankruptcy.

The American Casket & Manufacturing Company has filed articles of incorporation to engage in business in Chicago with a capital of \$100,000. The incorporators are: Anton Kulesza, Leonard Rutkowski, Theodore Giese and Stanley Skrzynecki.

One of the important local gatherings during the past ten days was the first meeting of the War Service Committee of the National Veneer & Panel Manufacturers' Association. The members attending were: B. W. Lord, Chicago; A. E. Gorham, Mount Pleasant, Mich.; M. W. Perry, Algoma, Wis.; E. R. Morrison, Jamestown, N. Y., and D. E. Kline, Louisville, Ky. The results of the meeting are given in our veneer section of this issue.

There were two important gatherings of vehicle, wagon and implement manufacturers in Chicago during the past week. The Farm Wagon Department of the National Vehicle & Implement Association held its annual meeting at the Hotel La Salle on Tuesday, December 18. Forty prominent farm wagon manufacturers participated in this session, which in addition to the routine work took up various questions pertinent to the members. The Plow and Tillage Implement Department held a full day's session on Thursday, December 20, there being a good attendance of manufacturers in this field.

H. M. Curran, who has been prominent in forestry circles for a number of years, paid *Hardwood Record* a visit last week. Mr. Curran has been spending several years in South America for the purpose of investigating the possibilities of development of South American timber. He was in charge of the development of Philippine forest resources and on completing his work there took up South American investigation. He expects to return to South America shortly for the purpose of opening up and developing a certain large boundary of timber owned by eastern interests.

T. J. McDonald, well-known timber estimator of Knoxville, Tenn., has been spending the past couple of weeks in Chicago on important timber matters. Mr. McDonald reports that the timber business is showing considerable activity at this time and promises even more after the first of the year.

F. J. Moore of the Expanded Wood Company, a subsidiary of the Evansville Veneer Company, Evansville, Ind., was in the city for a couple of days last week. Mr. Moore reports that there is a promising future for his expanded or sewed veneer for package purposes as soon as it gets through certain red tape connected with government sanction.

Mr. Hancock and Mr. Eddy of the Grand Rapids Dry Kiln Company, Grand Rapids, Mich., represented their concern in Chicago during the sessions of the farm wagon manufacturers.

N. A. Gladding, vice-president in charge of sales of E. C. Atkins & Co., Inc., the silver steel saw company, Indianapolis, was in the city for a few days about ten days ago and honored *HARDWOOD RECORD* by calling at its offices. Mr. Gladding says that there is extreme activity in the saw business and that his company has been fortunate in being able to take care of its trade in good shape.

E. J. Gillouly, formerly sales manager of the Foster-Latimer Lumber Company, Mellen, Wis., now captain in the twentieth engineers forestry regiment, passed through Chicago on Thursday of last week to take up his duties at Washington. Mr. Gillouly is enthusiastic over the prospective work ahead of him.

Other prominent northern visitors were H. F. Below of the Below Lumber Company, Stanley, Wis.; W. C. Boden, Kneeland-McLurg Lumber Company, Phillips, Wis.; William Dawley of Dawley Lumber Company, Wausau, and Fred Rader of John S. Andrews Lumber Co., Escanaba, Mich.

Maurice Welsh of the Lamb-Fish Lumber Company, Charleston, Miss., was also in town last week.

◀ PITTSBURGH ▶

The American Lumber & Manufacturing Company is making splendid headway in delivering its order of 21,000,000 feet of ship timbers to the United States Shipping Board Emergency Fleet Corporation at Portland, N. H. Oak is being shipped from the company's new planing mill at Lenox, Ky., and the fir timber from its mills at Aberdeen, Wash., and Highland and Portland, Ore.

Jos. W. Cottrell of the Jos. W. Cottrell Lumber Company has its southern mills busy cutting hardwoods. Its trade is very dull with the industrial concerns and Mr. Cottrell complains bitterly of the difficulties in getting lumber shipped.

The West Penn Lumber Company is making a specialty of industrial and manufacturing trade this year and finds that in this line business is better than fair. Prices are good and the demand is pretty active in many places.

Fred R. Babcock of the Babcock Lumber Company and W. H. Schuette of William Schuette & Co. have submitted to the War Industries Board a plan which they believe will prove of great assistance to the government in connection with handling the problem involved in securing an adequate supply of lumber. This involves an organization of lumbermen meeting voluntarily for the government and under conditions which would make possible the supply of lumber material so badly needed now.

◀ BOSTON ▶

The annual meeting of the Massachusetts Wholesale Lumber Association, Inc., was held at Boston, December 13. The officers elected are: President, H. W. McDonough; vice-president, H. M. Bickford; treasurer, E. C. Hammond; secretary, Arthur M. Moore; directors, the president, vice-president, treasurer and Wm. Bacon, Geo. E. Fisher, Morris A. Hall, Harry C. Philbrick, K. W. Hobart, H. B. Stebbins, W. M. Weston and C. P. Woodworth. One item in the calendar of the meeting was an establishment of a uniform practice among the trade in accounting and assuming the three per cent freight tax. After considering many views, the majority being in support of the policy finally agreed on, it was voted that the members should in future quotations or other reference to prices, formally advise that the same are "free from tax and freight advances." It was not thought practical to adopt any recommendation on current transactions. The Massachusetts association voted to join the Chamber of Commerce of U. S. A., to commit the subject of credit reforms and introduction of acceptances for later report and to conduct an energetic campaign for the Halifax Relief Corp. F. A. H. Street, 1st Cand. Contingent, related personal experiences and conclusions after three years in the trenches; much interest was manifested, as many of those present have sons or relatives in the service at this time.

◀ BALTIMORE ▶

Unusual cold with much snow has interfered greatly with the lumber trade. Some of the mills have had to shut down for the most part, and logging has come wellnigh to a standstill, giving the end of the year a far more quiet aspect than is ordinarily the case. The bad weather, but even more the railroad situation, has served to interfere with the coal movement to such a degree that many of the woodworking plants are seriously inconvenienced, and extensive suspensions of operation are quite frequent. Some of these factories are operated with electric power sup-

plied by the Consolidated Gas, Electric Light and Power Company of this city, and the company, being unable to get coal except in small quantities from day to day, last week cut off the current, forcing the factories to shut down. The interruption was only for a short time, to be sure, but the situation continues grave, and it may be necessary to close again at any time.

To meet the need of increased housing facilities to take care of the additional population attracted by work in munitions and other plants here a corporation has been formed under the name of the Dundalk Company to erect some 500 frame houses at Dundalk, a section on the way toward the plant of the Bethlehem Steel Company at Sparrows Point. The Dundalk Company has invited bids for the erection of the houses, though there is a possibility now that the coal famine and the suspension of work at Sparrows Point, until almost the entire plant is closed, may cause a deferment of the operation. Hundreds of other houses in different sections are projected because of the pressure for homes, and the outlook for the use of large quantities of lumber is very encouraging.

The Bagby Furniture Company, manufacturer of furniture in this city, has leased for a term of years a five-story warehouse at 109 West German street, and will use it as show and sales rooms. The company is now located on Hanover street.

A report has been received here to the effect that the Winchester and Western Railroad Company, which has embarked upon the construction of a line from the Baltimore & Ohio at Winchester, Va., to Wardsville, W. Va., a distance of about forty miles, will continue work all the winter in order to get the road in operation as soon as possible. The project is being promoted by capitalists interested in the Lost River Lumber Company, of which former Governor William B. Cornwell of West Virginia, is president, and the road will serve as an outlet for the products of the lumber company, though also doing a general transportation business and opening up a valuable section of West Virginia rich in natural resources.

President R. E. Wood of the R. E. Wood Lumber Company, is in receipt of a letter from his brother, Major G. L. Wood, formerly vice-president and general manager of the company, who resigned to join the Forestry Regiment for service in France. Major Wood writes that he is well, but that the command has experienced much bad weather, with a good deal of snow and frequent fogs. As to his work there he is, of course, reticent.

George Brenton Cearfoss, formerly engaged in the hardwood trade, making a specialty of walnut logs, with offices in this city, died at his home in the suburbs, December 14, after a lingering illness. Mr. Cearfoss was born at Hagerstown fifty-six years ago. He retired some years ago owing to increasing infirmities. He is survived by his wife, a son and two daughters.

◀ COLUMBUS ▶

That building cost is as low at present as it is likely to be for some time is the keynote of a report recently made by the Columbus Lumber Company. According to Seymour Brown, head of the concern, dealers in hardwoods and in fact all lines of building materials should campaign on that line. He says that throughout the United States there are a lot of far-seeing individuals who are putting their surplus money in safe investments in real estate and buildings. He claims that there is no chance for lower prices for several years to come, even after the close of the war.

At Columbus the Hedges & Clark Company has sold out to the E. A. Prentice Company.

The court of common pleas of Williams county has entered an order dissolving the Montpelier Hoop & Lumber Company.

Fire of a mysterious origin destroyed the yard and plant of Fred Hoffman Sons at Youngstown, O., about the middle of December. The loss is estimated at \$60,000.

One of the features of the lumber business is the strong demand from rural districts. This is especially true in the more prosperous farming communities. Farmers are building barns, outbuildings, corn cribs and houses of all kinds. In fact there is more building in the rural sections of Ohio than has ever been known. The lumber interests and especially hardwood business is benefiting by this building movement.

R. W. Horton of the W. M. Ritter Lumber Company reports a good demand for hardwoods, although bad shipping facilities are holding up deliveries to a large degree. He says orders for future shipment are coming in well, both from retailers and factories. The inventory period is now upon dealers and they are not buying so readily as formerly. Prices are firm and every change is toward higher levels.

◀ CLEVELAND ▶

Considerable low-grade hardwood, for use in packages being made for the government, was destroyed in a fire which razed the plant of the Cleveland Box Company, West Third street and Cuyahoga river, when the storm that hit Cleveland last week was at its height. All told \$50,000 damage was done. Only by strenuous efforts of the firemen was the blaze prevented from spreading to other plants in the vicinity.

Max Mehrlander, one of the best known members of the hardwood industry of Cleveland and northern Ohio, died and was buried here last week. Prominent members of the lumber and building materials industries were

Address Correspondence to Chicago Office

present at the funeral. Mr. Mehrlander was born in Germany, where he received a remarkable education, graduating from many universities. He came to America early in life, and engaged in the lumber business in the East. Later he came to the Middle West. Some of the leading hardwood and other lumber firms he was connected with during this period were the Martin-Barriss Company, the C. H. Foote Lumber Company, the Brown-Graves-Vincent Company, the Advance Lumber Company. His loss is felt keenly by the business which knew him so well.

EVANSVILLE

Daniel Wertz of Maley & Wertz says he looks for sharp advances in the prices of lumber between now and March or April next. This will be due, he says, to the increased cost of logs and the additional costs that manufacturers have been forced to pay for operating. Mr. Wertz says that lumber manufacturers here are now paying twenty-five to thirty per cent more for logs, and that other things have increased in proportion. He thinks that in 1918 furniture manufacturers of this section will be able to do only seventy-five per cent of the business they did this year, but says they will get all the business they can properly handle.

Fire on December 13 did small damage in the mill and yards of Maley & Wertz. It was started by hot coals that had been used to thaw out the water pipes.

Everett Miner, Browns, Ill., recently purchased the walnut timber on the farm of Mrs. J. B. Jolly near Grayville, Ill., and men are now at work cutting the timber. It will be shipped East to be used in the manufacture of gunstocks.

Fire on December 16 destroyed the plant of the Indiana Cooperaage Company at a loss of over \$10,000. Insurance of \$5,000 was carried. The origin of the fire is unknown. A temporary building will be rented at once and operations resumed.

The Wolfiin-Luhrling Lumber Company and the West Side Lumber Company recently were granted permission to change their names. The name of the Wolfiin-Luhrling Lumber Company was changed to that of Luhrling Bros. and will be managed by Elmer D. and Paul Luhrling. The name of the West Side Lumber Company was changed to the Wolfiin West Side Lumber Company and will be in charge of Charles A. Wolfiin.

J. C. Greer of the J. C. Greer Lumber Company says that the demand for staves is good and the mills of his company in Tennessee and Mississippi are being operated on full time. The hardwood end of his firm, in charge of Bert Tisserand, has been good for the past month and Mr. Greer has no complaint to make.

J. M. Blood & Bros., Grayville, Ill., have sawed up the logs they had on hand and will not be able to get any more for several weeks because

the Wabash river is frozen over and towboats and barges are not able to operate.

The log situation is causing many lumber manufacturers in this section much worry. For several weeks flat cars from the railroad companies have been hard to obtain and as a result few logs have been brought in. Some of the manufacturers started to bring in a few logs by boat from Green river, which stream empties into the Ohio nine miles above here, but the Ohio river has been frozen over in places for the past ten days and many large gorges are reported in the Ohio river, which makes navigation at the time impossible. It may be several days before navigation is fully resumed on the Ohio river and tributaries. As a rule at this time of year manufacturers have enough logs laid in to run them during the bad winter months, but not so this year. The labor shortage is worrying the manufacturers to some extent, too, and it is expected that the next draft will take many of the men from the sawmills and wood consuming factories in this section.

George O. Worland, secretary and treasurer of the Evansville Veneer Company, reports trade very good and taken as a whole the veneer business has been of a larger volume than last year. However, the profits of the manufacturers have been smaller for the reason that the cost of operating has increased.

MEMPHIS

The Mississippi river at Memphis is practically a solid block of ice and transportation on that stream is at an end for the time being. Temperature is moderating rather rapidly at present but it is anticipated that it will be some time before the river will be clear enough of ice to allow resumption of the handling of traffic. Some of the mills at Memphis depend on Mississippi and Wolf rivers for their log supplies and they are strictly up against it at the moment. Fortunately these mills are better supplied with logs than the mills dependent on the carriers. They have a surplus on which to draw and, if the ice does not remain too long, it will be possible for them to get by without losing very much operating time.

Lumber interests here are watching developments closely in connection with the proposed revival of water transportation on a much larger scale. B. L. Mallory, of Memphis, attended the conference held at St. Louis recently to consider plans for co-operating with the government which has made an appropriation for building twenty-four concrete barges and a number of towboats for use on that stream. The movement is really assuming much more tangible shape and lumber interests believe that prospects now are for some definite accomplishment in the direction of rehabilitation of water transportation. And they are awaiting such a development with the keenest anticipation because they realize that

there is going to be little relief from the railroad congestion and lack of equipment. Lumber and logs can be handled to good advantage on the Mississippi and its tributaries if the facilities are provided by the government, in conjunction with business interests throughout the valley, and some lumbermen go so far as to express the belief that their salvation lies in that particular direction.

Sixty prominent lumber firms at Memphis have offered fuel wood to the city of Memphis at nominal cost in lots of one to three car loads. They have taken this step because of the threatened shortage of coal and the desire of the city commissioners to put in a reserve supply of 10,000 cords of wood. But their offer has apparently come to naught because the railroads hold that, if cars are furnished for transporting this fuel wood to Memphis, they will be charged against the pro rata of the lumbermen. The latter are receiving so few cars that they cannot afford to have their pro rata reduced still further and the city will have to look elsewhere for relief. The ruling comes from A. H. Egan, chairman of the Memphis committee of the Car Service Commission.

Ralph May of May Brothers says that nothing will be done in the immediate future toward getting out timber on the tract of 8,500 acres acquired by the firm some time ago near Grenada, Miss. He says that his company has more than 1,000 cars of logs, cut from other lands, awaiting transportation, and that it will await further developments before preparing more. He also states that the company does not intend beginning construction of the mill planned for the development of the timber on this tract any time soon.

The management of Moore & McFerrin, operators of a sawmill and box factory here, announces that immediate steps will be taken looking to the rebuilding of the sawmill which was recently destroyed by fire, with an estimated loss of \$25,000. The box factory of the firm escaped damage and is being operated at full capacity.

The A. T. Hallock Lumber Company, Jackson, Tenn., has secured a building in which it will install machinery for the manufacture of wooden containers for canning factories, packing houses and similar industries. Modern box-making equipment will be installed and the management plans to have the plant in operation in the near future.

The Columbus Lumber Company is making improvements involving about \$70,000, according to D. F. McCullough, general manager. The improvements include the building of a dry shed that will take care of 2,000,000 feet of lumber, installation of additional dry kilns, new boilers, the building of machine shops and additions to the mill plant that will bring the daily capacity to 100,000 feet.

R. L. Jurden of Penrod, Jurden & McCowen, Inc., has gone to Washington to act in an advisory capacity to the Southern Hardwood Emergency Bureau, of which he is a member. He relieved W. B. Burke of the Lamb-Fish Lumber Company at the end of the past week and will be relieved, in turn, by W. A. Ransom of the Gayoso Lumber Company, or Ralph May of May Brothers, Memphis, two other members of the bureau.

Russe & Burgess, Inc., have four stars in their service flag, representing that number of men who have joined the colors from among their forces, including one from their London office. In the number is John E. Burgess, son of the late George D. Burgess, former vice president of the firm.

< LOUISVILLE >

That transportation is in a serious way and drastic measures are necessary to protect the interests of the country were shown a few days ago when W. B. Bryan, Kentucky fuel administrator, seized nearly 3,000 cars of coal on the Louisville & Nashville lines and turned this coal over to the various cities of the state. Most of this coal was being held to be turned over to the Eastern and Northern lines at Cincinnati, some of it having been held two weeks, as the roads were unable to get it through the Queen city on account of congestion.

Fire on December 10 destroyed the plants of the Parkland Veneer Company and the Parkland Sawmill Company, owned by the Louisville Planing Mill Company. The loss on the two plants was estimated at between \$60,000 and \$70,000 by Olaf Anderson, head of the Louisville Planing Mill Company. The Parkland Sawmill Company, of which W. R. Willett of the W. R. Willett company, is secretary-treasurer, has leased the plant and had been operating it for some time. Fire started from a plumber's gasoline torch, which was dropped in a pile of shavings while thawing out a frozen water pipe. On the same evening the plant of the Leonard Brush & Woodenware Company, which has been working on a government contract, was destroyed by fire, the loss being estimated at \$40,000.

J. V. Stimson, operator of mills at Huntingburg, Ind., Memphis, Tenn., Owensboro, Ky., and other points, recently suffered a fire loss at the Owensboro plant, when the saw filling room, several hundred dollars worth of saws and the roof were destroyed.

The plant of the Glasgow Flooring Company, Glasgow, Ky., controlled by the J. O. Ness Company of Chicago, was recently burned along with finished flooring valued at \$30,000. The fire started in the planer, and due to a high wind could not be held in check.

In order to aid Louisville manufacturers who are anxious to obtain war orders, the Louisville Industrial Foundation, the million dollar industrial department of the Louisville Board of Trade, is planning to establish a war order bureau at Washington, to look after the interests of Louisville manufacturers who are interested in such orders. This would relieve several concerns of the necessity of keeping men in Washington to look after their interests.

The Paducah Cooperage Company, Paducah, Ky., has been having so much trouble in getting shipments of material from its southwestern mills that it has been advertising in the western Kentucky papers for local shipments of white and red oak stave bolts delivered at mill.

Ira T. Shannon, formerly superintendent of the Kelly Handle Company's mills in Arkansas and Mississippi, has taken charge of the Burkesville, Ky., plant of the Turner, Day & Woolworth Handle Company of Louisville.

John C. Lewis, Syracuse, N. Y., who recently took up some timber at Harts Branch, near Manchester, Ky., has arrived in Manchester and has started looking over his property in order to start developments at an early date.

Almost a record price was paid for Kentucky mules when the Chattahoochee Lumber Company of Lela, Ga., recently purchased twenty-four 1,200-pound mare mules from Hansborough & Wakefield of Shelbyville, Ky., paying \$260 a head for the stock, which is needed in handling logs at the Georgia mill.

"The Federation of Social Agencies" was the topic of an address delivered before the Louisville Transportation Club by Arthur D. Allen, vice-president of the Mengel Box Company. Mr. Allen has been taking much interest in this movement and is well posted on the subject.

Meetings were recently held in Louisville by the Louisville branch of the Southern Hardwood Traffic Association and the Louisville Hardwood Club, the latter meeting closely following the traffic meeting at the Seelbach hotel. At the traffic meeting a general discussion of southern shipping conditions was entered into, and shipping through southern ports received consideration. Several members stated that they had found such exporting very satisfactory except that there are not enough vessels putting into the southern ports. The meeting of the Hardwood Club developed the fact that government orders are about the only business that can be readily handled, and about the only thing the trade is making any effort to obtain. At this latter meeting a letter was read from E. D. Tennant of St. Louis, secretary-treasurer of the Concatenated Order of Hoo-Hoo, relative to obtaining funds for the comfort of soldiers in France. Another letter from J. E. Barton, Kentucky state forester, called attention to the work of Miss Emma Dolfinger, a Louisville school teacher, who is endeavoring to obtain samples of all native woods of Kentucky to be used in the Louisville public schools in connection with study.

Several lumbermen and men connected with woodworking organizations were present at a recent meeting of the Kentucky Manufacturers' & Shippers' Association, held in Louisville. The principal topics discussed were: "War Problems as They Affect Kentucky Industries," "The Child Labor Laws," "State and Federal Tax Laws," "Workmen's Compensation," and "Compulsory State Insurance." J. E. Edgerton, president, and C. G. Gilbert, secretary of the Tennessee Manufacturers' Association, were present as guests.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

◀ ARKANSAS ▶

Lemoke, Ark., has been selected by the War Department as the location for one of the government's aviation training camps and contracts for the construction of the needed buildings have been awarded to the Stewart-Metichue Construction Company, on Little Rock. This company erected the cantonment buildings at Camp Beauregard, near Alexandria, La.

The plant and mill of the Ozark-Grease-Lumber Company at Prescott, Ark., which was destroyed by fire a few months ago, is being replaced now by a thoroughly new and modern plant.

For the purpose of constructing a road through the Arkansas National Forest, between Russellville and Pleasant Hill, the Department of the Interior has authorized an expenditure of \$43,000 of the funds available for this kind of work. This sum, which comes from a fund made up from the sales of timber, fees, etc., in the Arkansas National Forest, is to be supplemented by an appropriation from the state. The plans for the new road have been prepared by the state highway engineer, under direction of the State Highway Department, and are now in the hands of the commissioners of the road.

◀ WISCONSIN ▶

The Hackney Phelps Bennett Company, Phelps, Wis., started operations in its new sawmill on December 15 and is now cutting 50,000 feet a day. A night shift will be added January 1, which will increase the output to 100,000 feet. The Phelps mill was destroyed by fire in September, 1916, and since that time the company has been engaged in constructing and equipping a new plant that is considerably larger in capacity and of the most modern type. A seven years' supply of timber still is available, it is estimated.

The Silent Washer Company, Clintonville, Wis., a reorganization of the Silent Washing Machine Company, Appleton, Wis., has completed its new plant and the machinery and equipment has been transferred from Appleton and is being installed. The concern manufactures power and manual wash machines and home laundry equipment. G. W. Buttle, its founder, continues as general manager.

The Foster-Larimer Lumber Company, Mellen, Wis., will add a full night shift to its sawmill force on January 1 and intends to operate the plant twenty-four hours a day until spring and possibly longer to accommodate its increasing orders.

The McKinnon Manufacturing Company, Grand Rapids, Wis., has booked a large order for heavy wagons for the United States army and expects to begin deliveries January 1. Considerable difficulty has been experienced in obtaining adequate supplies of raw materials, principally selected hardwoods.

Bauer & Knoop, who have operated a sawmill at Butternut, Wis., for many years, have decided to retire from active business because of advancing age and the property has been placed on the market. It is said that the mill has a supply of market timber in sight to last for eight or ten years.

The Lee Bros. Lumber Company, Rhinelander, Wis., resumed operations in its sawmill on December 17 with day and night shifts. Business is so good at this mill that the owners expect to operate twenty-four hours a day for at least a full year.

The Brooks & Ross Lumber Company, Schofield, Wis., has completed repairs and overhauling work and resumed sawing on December 15. The large stock of logs at the mill is reinforced by large supplies on skids in the woods and indications are that the mill will be able to operate steadily throughout the coming year.

The Oostburg Lumber & Grain Company, Oostburg, Wis., has changed the entire drive of both saw and grist mills from steam to electricity as a matter of economy and efficiency. Current will be purchased from the Milwaukee Northern Interurban line.

The Tigerton Lumber Company, Tigerton, Wis., has added another large steam hauler to the equipment of its logging camps in the vicinity of Summit Lake.

The Rib Lake Lumber Company, Rib Lake, Wis., is taking up ten to twelve miles of logging railway running from Rib Lake to its timber at Athens, Wis., and will use the material for the construction of a new railroad from Rib Lake east to a large tract of virgin forest. The road will be about twenty miles long. The company will begin cutting timber at the east edge of the tract and move toward instead of away from the mill. In this manner all cut-over land will be left behind as logging operations progress and the danger of forest fires will be greatly minimized.

The Hardwood Products Company, Neenah, Wis., has recently improved its fire protection system, which is now one of the most efficient in Wisconsin. Fire drills are held nearly every day and the plant has been emptied on an average of two minutes.

The Wisconsin Chair Company, Port Washington, Wis., has engaged in a large production of phonographs, to be marketed under the name of "Vista". Considerable space in its two factories is being devoted to the new department.

The Sheboygan Couch Company, Sheboygan, Wis., has increased its capital stock from \$75,000 to \$111,000.

The Badger Brush Company, Milwaukee, is remodeling a three-story building, 40 x 80 feet, at Knapp and East Water streets, into a manufacturing plant, which it expects to occupy shortly after January 1. The present plant at 3417-3419 Vliet street has been outgrown.

THE G. W. JONES LUMBER COMPANY

APPLETON, WISCONSIN

*Long Time Manufacturers of
Northern and Southern Hardwoods*

MILLS AT
WABENO, WIS. FORREST CITY, ARK.

The Stevens Lumber Company, Rhinelander, Wis., has completed its new sawmill to replace the big plant destroyed by fire on last Memorial Day, May 30, and is running a full day shift of ninety men. Early in the new year a night shift will be added.

The Shawano Hub Manufacturing Company, Shawano, Wis., is considering three propositions with respect to its plant. One is to continue the mill as a hub factory under the present management; another is to lease it to interests which desire to take over the property, and the third is to convert the industry into another line. A decision will be reached within a short time.

The Northwestern Motor Company, Eau Claire, Wis., manufacturer of a variety of gasoline and kerosene-powered railroad equipment, including forest patrol cars and logging engines, is planning to erect a complete new plant during the coming year in order to provide proper facilities for handling its rapidly increasing business.

The Hatten Lumber Company, New London, Wis., has completed important improvements at its sawmill which greatly increases the efficiency and provides an adequate supply of logs independent of switch engine service in its yards. A huge steam crane has been constructed at the foot of the log slip, by means of which fifteen or twenty logs can be lifted from flat cars at one time and hoisted to three rollways for reserve, so that a forty-eight hours' supply of logs always will be available. The crane is operated by a steam log loader purchased from the Keith & Hiles Lumber Company, Crandon, Wis., and to which another drum has been added. The lumber grading shed also has been enlarged by an addition, 52 x 40 feet, providing a total of eighteen lumber trucks. It is likely that a new resaw will be installed soon to replace the present equipment, so that larger timbers may be handled than heretofore. The mill was closed for several days while final changes were completed. A full night crew will be put on shortly after January 1.

William Dhein, Eaton, Wis., has sold a tract of forty acres of timber and a small sawmill at that point to Adolph Jensen, who will establish a camp and re-open the mill at once.

The Wisconsin State Council of Defense has issued a request to county councils throughout the northern Wisconsin timber country urging that settlers be impressed with the necessity for a large wood cut during the winter so that there may be provided an adequate supply of wood fuel to fortify Wisconsin against a possible shortage of fuel during the coming year, especially since it is believed certain that the coal supply of the immediate future will be wholly inadequate to fill all requirements.

A party of Wausau lumbermen who are stockholders in the Wausau-Southern and the Marathon Lumber companies of Laurel, Miss., recently traveled South to inspect the various mills. Conditions were found to be fairly satisfactory, the shortage of cars being a much greater handicap than the labor situation. The party consisted of Walter Alexander, C. C. Yawkey, W. H. Bissell, D. C. Everest and A. P. Woodson.

The Phoenix Manufacturing Company, Eau Claire, Wis., widely known in the sawmill and logging equipment and machinery industry, has temporarily stopped acceptance of new business because of the unprecedented demands upon its facilities. The company is executing large orders for ordnance and gun carriage tools, automatic stokers and other equipment for the Westinghouse interests; sixteen huge shipbuilding crane trucks for the government through the McMyler Interstate Manufacturing Company, Bedford, O., and a number of Phoenix "Centipede" tractor trucks for the United States army. Repair work on ten large steam log haulers also has been undertaken, together with the construction of new steam engines for logging use in the United States, Canada and Alaska.

T. J. Roberts has been appointed receiver of the C. H. Krause Lumber Company, Antigo, Wis. George Wunderlich, who recently procured judgment against the company in the Langlade circuit court, and other creditors have taken action to collect claims.

Julius Ewald, Cumberland, Wis., inventor of the folding berry box and a well known veneer expert, died recently of apoplexy. Mr. Ewald was the founder and chief owner of the Cumberland Fruit Package Company.

Louis Goulet, a pioneer logging jobber and timber operator of Chippewa Falls, Wis., passed away recently from the effects of a stroke of paralysis which he suffered two years ago. He was born in Quebec on July 12, 1845, and came to Chippewa Falls in 1861. He retired ten years ago because of advancing age.

Word has been received by Hon. Isaac Stephenson, Marinette, Wis., that his son, Lieut. Grant Stephenson, has received a promotion in the United States navy and is now first in command of a mine sweeper with four officers and forty men under his direction. Lieut. Stephenson has been in European waters for six months as second in command of a patrol boat.

The Hardwood Market

CHICAGO

Chicago approaches the close of the year with a substantial measure of satisfaction over the past twelve months and with considerable confidence

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

in the future. The past year has brought a mixture of good business and of bad. It brought radical changes, the substitution of many new markets, following the elimination or curtailment of normal movements. The course of business done, however, has been good and lumber concerns close their books with records for the most part of a prosperous twelve months. The feeling locally is that factory curtailment may continue after the first of the year, especially with difficulties in shipments and all realize that the big fight will be to get lumber through. There is not any definite promise of extended factory requirements but Chicago the lumber clearing house is doing its share to fill newly developing needs for lumber, particularly as they come from the manufacturers of accessories to indirect war work. Local prices hold well and promise well for the future.

◀ PITTSBURGH ▶

Wholesalers in hardwoods are doing a very good business with industrial and manufacturing concerns, which have great trouble in getting the lumber delivered. Embargoes prevail everywhere and priority orders only add to the troubles of shippers. Hardwood mills in tri-state territory do not have large amounts of stock on hand. Many of them have been handicapped by a lack of men and teams, while others find shipping conditions so bad that they are not stocking up with lumber. The furniture buyers are pretty nearly out of the market. Furniture trade is reported to be very dull. Manufacturers are not buying because wholesalers and retailers are not selling, and in the final analysis because the ordinary family can get along without furniture for the present. Desk manufacturers are doing a big business and manufacturers of chairs and cheap furniture are fairly active. Plate glass manufacturers are out of the market. There is very little buying on the part of automobile concerns, due to the fact that the production of pleasure cars will probably be cut down more than one-half next year. Yard trade is very dull this month because of inventory.

◀ BOSTON ▶

The holiday season, closing of accounts, a very early and severe start of winter may now be added to the already well known obstacles to business in New England. The gross result of all factors disclosed no argument for reducing prices to get business, and evidently this is a general belief by all holders, quotations being in fact firm to very high, according to immediate conditions.

◀ BALTIMORE ▶

The holiday season is at hand, and with it has come the quiet that usually prevails at such time. Even the hardwood men who have been optimistic in their views until now, admit that the movement has begun to narrow, and it is generally conceded that the general situation presents a decidedly uncertain aspect. It would probably be quite possible for a dealer to get enough orders to keep him going full time, but the business is more than ever complicated by freight embargoes, lack of cars and government regulations which make it very difficult to get cars or permits, or to have the cars moved if they happen to be forthcoming. In addition, the severe weather of the last two weeks has interfered seriously with operations at the mills. Some of the plants have shut down altogether, while others have been working at greatly reduced rates with the result that the output of hardwoods is materially reduced. All this would naturally tend to stimulate the inquiry for hardwoods if it were not for the disturbed conditions due to the war. Apart from all this, however, the approach of the end of the year makes for deliberation, if not for actual holding back, and the volume of business done may be expected to show no impressive proportions. As for the returns, they are good enough. So far as the lower grades are concerned, they have undergone a further advance, a development directly traceable to the calls for enormous quantities of lumber suitable for boxes. So great is this demand that the woods ordinarily used for the purpose no longer suffice, and various other species are included in the inquiry. These woods are gum, poplar, cypress, birch and even basswood. The low grades of all of these are sought with much freedom, and as a consequence of the enormous government requirements of packing boxes in which to ship military supplies abroad as well as to distribute such supplies in this country, these box grades receive a measure of preference on the railroads, so that the business of supplying the lumber possesses certain advantages. The hardwood men, of course, are making every effort to aid the government, though as far as the higher grades are concerned, they are less affected by the war than other divisions of the trade.

On the whole, good feeling prevails among the hardwood men and they are looking to the future with confidence. They never have much business ahead, but new orders come out in sufficient volume to keep them going. Not a few of the dealers, consequently, are quite ready to take up desirable stocks whenever they reach the market. These dealers take the view that the offerings later on may be still smaller than they are now, and that there is little prospect of an improvement in general conditions. Consequently, they want to be in a position to take care of future wants.

All Three of Us Will Be Benefited if You Mention **HARDWOOD RECORD**

< COLUMBUS >

The hardwood trade in Columbus territory has been showing marked strength during the past fortnight. Buying is fairly active and prices are still ruling strong. Prospects for the coming year are rather bright, despite unusual war conditions. There is a better feeling in building circles generally and it is believed that quite a few construction jobs will be pushed during the coming year. This is especially true of homes and apartment for which there is a great need in Columbus. The worst feature of the trade at this time is the inadequate shipping facilities which are holding up deliveries. Embargoes on many of the southern roads together with a partial breakdown of motive power are the outstanding features. Dealers as well as factories are clamoring for shipments. Much of the buying at the present time is for shipment after the first of the year and during February. Retail stocks are not large and some dealers are trying to increase them during the winter season.

Factories making boxes and implements are the best customers among manufacturing establishments. Box factories are also buying to a large extent. Collections are generally good and a fairly good feeling is shown in lumber circles generally.

Quartered oak is in good demand. Plain oak is strong and there is a considerable demand for all grades. Chestnut is one of the strongest features of the trade. Poplar is strong and prices have been advanced recently. Other hardwoods are unchanged.

< CLEVELAND >

Severe winter weather, government's demands upon labor and materials, and the lack of transportation all have combined to make for a slackening hardwood market in the Cleveland and northern Ohio district. The first has cut down the demand for hardwoods because there is practically no small building going on, and all the big projects have been contracted for. Demands for labor and materials going into war munitions by the government has caused a diversion in business activity, and finally the absence of sufficient cars to bring new material from the producing districts here is a factor that is retarding business. Local sellers are not keen under the latter conditions to urge business, believing they cannot get sufficient material to replace depleted stocks. A combination of these conditions has made a practically stationary market here, and there is no price change during the fortnight. Perhaps the principal reason for a lack of buying interest is the disposition of people not to build. Many people would build were they able to obtain loans on the projects, but so far there is no disposition on the part of the banks to part with the money. In leading quarters in hardwood circles it is believed the absence of keen buying is due to the end-of-the-year dullness, and improvement after the first of the year is looked for.

< EVANSVILLE >

Hardwood lumber manufacturers in this territory report that the log and labor shortage is still a problem, but in spite of it many of the up-town mills in Evansville are being operated on full time. The river mills are still closed. Quartered white oak shows some signs of picking up and prices are stiffening. Plain white oak is in better demand and better prices prevail. Hickory is strong, several large orders having been placed here recently. The better grades of walnut are good and the demand for the poorer grades has improved. Gum is some stronger and maple and elm are moving steadily. Ash is strong. Quartered sycamore is also fairly strong, with sales liberal. There is a good demand for both cottonwood and poplar, box factories in this section, many of which are working on large government orders, being in the market for this stock. Collections are very good.

During the severe cold weather manufacturers report they had considerable difficulty keeping their mills in operation. They say they will finish the year with a nice volume of trade to their credit and are looking for fairly good business during January. So long as the European war continues manufacturers look for a good demand for all grades of lumber required in the making of war materials, but in other lines trade may be uncertain and in all probability will come in spurts. The cold weather has checked all building operations in Evansville and southern Indiana towns and little picking up is expected before spring. Sash and door men have been having a fairly good out-of-town trade. Planing mills report business rather dull.

< MEMPHIS >

Business is very much restricted in hardwood lumber circles, partly because of the unusually severe weather which has been accompanied by sleet and snow for the past ten days, and partly because of the difficulty of effecting deliveries, due to the shortage of equipment for handling outbound shipments. Lumbermen are slow about entering into engagements where they cannot see their way clear to make deliveries and they are finding comparatively few orders at the moment, outside of those where the government is interested, that are really practicable. There is a demand for lumber of very satisfactory proportions but so many orders have strings tied to them that lumber interests here are inclined to steer clear of them. Not much is being said about government orders for very obvious reasons. But it is quite apparent that considerable lumber sold from Memphis is going to the government, either directly or

Indirectly. In the meantime prices are firmly maintained. Stocks are already below normal and further inroads are being made, especially in view of the fact that production is on such a limited scale. Costs are mounting, too, and lumber manufacturers are scrutinizing both their stock lists and their quotations very carefully because they realize that there is nothing to be gained by selling present holdings at a price that will not allow a fair margin for replacing.

Low-grade cottonwood and gum are the most active features of the entire hardwood list at the moment. Box manufacturers are doing an unprecedented business and are absorbing offerings in these materials as fast as they come on the market. They are having difficulty in securing their requirements even after taking all they can find. Meantime, prices are steadily advancing. High-grade gum is comparatively quiet, though sap is rather more active than red. Cottonwood, in the higher grades, is in good call. There is a fair movement of quartered white oak in the higher grades, while high-class veneers are moving in considerable volume. Plain oak is a good seller, with the demand leaning to stock thicker than 4". Ash is selling well and there is a strong demand for hickory. Cypress is also reported in very satisfactory request.

< NASHVILLE >

Government requirements for lumber are the most important feature of the hardwood trade, and eliminating this feature the hardwood market would be comparatively quiet. The demand is largely for specialties, and some of the mills are not able to meet many of them. Oaks, hickory and ash are strong, and in brisk demand. There is also demand for all of the walnut available for the manufacture of gunstocks. Poplar and chestnut are in fair demand. The labor situation continues a serious proposition, and there is little improvement in general transportation conditions, due to shortage of cars and embargoes. Government orders are given right of way. The general tone of prices is firm.

< LOUISVILLE >

To complicate the already serious traffic situation Louisville has experienced the worst run of December weather ever known. Seventeen inches of snow about December 10 and a temperature of seven below zero demoralized transportation, caused much yard congestion, and put the already overburdened railroads on the hummer. In addition river traffic has been entirely suspended. However, weather conditions are improving, and forecasts are favorable. Normal transportation is entirely out of the question now, and leading shippers hardly expect any improvement before February 1 at the earliest. Commercial deliveries at a standstill, and about the only business that is being moved consists of direct or indirect government orders. This demand is large enough to practically make up for the loss in commercial business, which is waiting on cars and on lifting of the various embargoes into the North and East. It is said that with resumption of normal traffic the movement of hardwoods will be the heaviest ever experienced as the large consumers have been getting very little material for the past two or three months, and that inquiries show that they are ready to buy whenever the mills can make deliveries. Stocks in Louisville are low, as heavy shipments have been made from yard stocks, while shipments from the South have been too light to increase local stocks. Mills in many sections of the state and South have been forced to suspend on account of labor, weather and the traffic situation, and production is said to be light just now. Logstocks are low at most of the mills, and walnut logs are very scarce. Prices are strong and showing advancement and all hardwoods are in demand for immediate delivery.

< MILWAUKEE >

The winter's log cut in northern Wisconsin and upper Michigan cannot reach the volume of the input of last season, in the opinion of well informed loggers, principally because the supply of labor available for work in the woods is far below that of a year ago. It is stated that while the car situation is acute, the effect of this factor is far less important than the labor situation. There is perhaps only one district which expects to show an increase in the cut, and that is Forest County, Wis., where the supply of men is relatively larger than elsewhere in the northern timber country.

Activity at the northern mills is constantly broadening, and while numerous mills already have put on night shifts, many more will do so immediately after January 1. The summer and fall sawing season was one of the most active in years and the demand for lumber of all kinds is continuing along such large lines that it has been found necessary to increase the production wherever possible. It is noteworthy that many mills which have just resumed operations after the annual shut-down for repairs and overhauling, plan not only to put on night shifts at once, but to keep day and night shifts busy from now until the end of the season in December, 1918.

The tone of the hardwood market continues firm and the tendency is upward. Here and there slight easiness is noted, but in the main present lists are being adhered to strictly and probably will experience an upward revision during the early months of the new year. This is said to be true of all lumber. Costs of production have risen enormously and with a demand that grows more active from week to week, it is hardly to be expected that prices will soften for a long time to come.

NORTHERN MANUFACTURERS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany & Qtd.-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

We have the following for sale

1 car 5/4 FAS Unsel. Birch

35,000 ft. 6/4 No. 1 Com. & Btr. Unsel. Birch

THE GOLDEN RULE

Michigan Hardwoods

Cadillac Quality

Nature has been generous in supplying Cadillac an abundant supply of superior timber and we are supplementing her work with the best methods of manufacture.

This has made Cadillac Quality famous.

Good timber, lumber well manufactured and seasoned, grades that are reliable and not blended to meet price competition, punctual service; — these are the elements of Cadillac Quality.

We sell direct to responsible dealers and manufacturers.

Everyone KNOWS what OAK is; that is why it is so easy to sell Oak goods

There will always be a market for all the Oak our sawmills have any right to cut.

There are eight evergreen oaks in the United States, more than half of which are confined to the region west of the Rocky Mountains. Not one of them possesses much value as a source of lumber.

AMERICAN LBR. & MFG. CO., Pittsburgh, Manufacturer and Wholesaler PENNSYLVANIA

Oak was spoken of with affection in the Scriptures and will be held in esteem by our children's children generations hence.

All Three of Us Will Be Benefited if You Mention HARDWOOD RECORD

TRY KNOXVILLE TENNESSEE

You can logically do so because you must ultimately depend more and more on this region for your hardwoods.

No higher type of timber can grow than that abounding in eastern Tennessee. It is found on a soil and in an environment which put quality in the trees generations ago. It is our task merely to see that this quality is utilized to the utmost in making the boards you buy. The best of equipment and highly trained organizations working in one place for years at a stretch make that task easy.

Then too you can be sure of getting the best possible service—always.

Ask about it from any of the following:

The Vestal Lumber & Mfg. Co., Knoxville, Tenn., & Fonde, Ky.
The J. M. Logan Lumber Company, Knoxville, Tenn.
The Little River Lumber Company, Townsend, Tenn.
The Babcock Lumber & Land Company, Marysville, Tenn.

(Main Office: Pittsburgh, Pa.)

MEMPHIS TENNESSEE

THE WONDER CITY OF HARDWOOD PRODUCTION

Nearby Demands for Furniture Woods

The whole United States draws furniture supplies from its Memphis region; but, naturally, the largest purchasers are the factories in neighboring states. Freight rates must always play an important part in lumber distribution and have much to do with determining markets. The three states occupying the Ohio valley—Ohio, Indiana, and Illinois—produce nearly one-third of the furniture of the United States. If Kentucky is included, the output is nearer one-third, as the following figures show, the data being board feet per annum used by furniture makers:

Illinois	128,860,000 feet
Indiana	116,110,000 "
Ohio	46,560,000 "
Kentucky	19,716,000 "
	<hr/>
	311,246,000 feet

The total for the whole country is 944,677,000 feet.

Other markets which draw part or all of their furniture lumber from the Memphis district are Missouri, 28,165,000 feet; Arkansas, 22,917,000; Iowa, 7,352,000; Alabama, 6,985,000; Mississippi, 10,278,000; Louisiana, 8,385,000. Tennessee is a large customer.

There are no means of determining how much furniture lumber and veneer is shipped from the Memphis district to distant states, but the quantity would make a large sum if all the figures could be collected. It is known that lumber goes from Memphis to furniture factories in California, New England, Pennsylvania, and New York. It is found wherever high class lumber is wanted and where freight rates permit it to meet competition. It is frequently able to pay higher rates than are paid by its competitors, and still successfully meet competition because of its superior qualities.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Review and Outlook

General Market Conditions

WITH THE NEW YEAR'S RETURN OF NORMAL BUYING still sluggish, conditions reveal a more pronouncedly war market. The trade is effecting a continually closer organization in behalf of the government's effort to supply itself adequately with forest products and the result is a growing percentage of lumber production shipped for war work. There are still conflicting reports of the probable fate of the so-called "non-essential" industries, but the tendency of the government seems to be to gradually absorb the non-essential lines in the work directly in line with war preparations. Thus there is no disturbance in manufacture or raw material requirements.

Of course in many cases there might be a switching about in lumber needs, as most items of war equipment would call for entirely different materials than those going into the manufacture of commercial lines which factories so converted have been turning out. This government policy is gratifying and heartening, and if kept up and expanded with sufficient rapidity to meet the government's own requirements should eliminate the menace of enforced curtailment of non-essential manufacturing capacity.

There may be room for concern though in a comparison of figures which show a contemplated expenditure of some nineteen billions of dollars for the year, whereas the total value of manufactured products in this country last year ran only into the twenty billions. If the government really spends that much money in one year it will require manufacturing facilities enough to offset it. With manufacturing facilities represented at twenty-four billion dollars' production, and with the government immediately requiring nineteen billion dollars of production, the question is where will the producing capacity come from except by cutting out industries that are not directly in line with the war work? Whether or not the process of gradual absorption will prove equal to the occasion remains to be seen.

Reflection of conditions having to do immediately with the hardwood market shows the outstanding features to be increased in strength in almost all items in thick stock, with box and crating material in the lead. The box people are ready buyers of almost any material which will meet their needs, whereas manufacturers of war specialties are taking on immense quantities of the cuts which their specifications demand. At the same time the normal output is being taken up in fair shape in commercial and other channels, and the tone of the whole market is exceptionally strong, with prices continuing their forward trend, or at least, holding a very firm level. Of course, it is obvious that the present situation

in commercial buying figures would not stand firm were the influence of large volume of shipments of war work not so direct a factor.

Reports are rather discouraging from the South as covering future mill production, as growing difficulty in getting in logs has already caused the shutting down of a number of operations. It is confidently expected though that with government control of shipping there will be a more uniform distribution of cars, which will effect a considerable improvement in this situation.

In the North, where the main dependence is upon good sledding roads, the outlook is favorable so far as log input is concerned, the probability being that there will be a considerably larger production than had been anticipated. With the prospect of all of this lumber moving out promptly and at good prices northern manufacturers are in a cheerful mood.

The many mid-winter meetings in the hardwood trade, which will practically cover the entire manufacturing industry, will be of momentous importance this year, as they will tend not only to reveal the true conditions of stocks, sales and prospects, but will help to better shape policies to meet rapidly changing conditions. With these meetings coming at a time when there is considerable uncertainty as to values, and with the probability of values becoming important features of the discussions, the outlook is that the tendency of trade will be towards greater strength rather than towards disorganization.

An Eye Opener

IT TOOK WAR TO OPEN THE EYES of the government to the fact that trade associations are of some account after all. During the past few years, and until recently, government officials considered it their duty to watch associations as if they were bands of burglars planning robberies. Lumber associations, in particular, had occasion to know with what suspicion the government regarded them. Their business meetings were considered as little less than conspiracies to rob the public; and the threat of prosecution was perpetually hanging over such bodies. Expensive and extensive investigations were carried out, particularly in the lumber industry, in a search for proof that such associations were trying to fix prices and control trade. It is an old and familiar story.

The war cleared the air very quickly. The government suddenly found itself in need of enormous supplies, and it did not take long to find out that the supplies must be procured by dealing with associations, rather than with individuals and single companies. It was discovered that the associations which had been so long under suspicion were pretty good things after all. They alone were able to give the help that was sorely needed. The charge that such

bodies were organized for the purpose of fixing prices and robbing the buyers were no longer heard.

Associations have won a great moral and business victory. They have justified their existence and their methods; and this is being acknowledged by the government. It is glad to come to them for help, and it is fortunate that the help is forthcoming. In all probability, government hostility toward legitimate trade associations has been killed forever. Better acquaintance was all that was needed to bring about the change. The government had long looked for an enemy in such associations and had failed to find it; but when it needed a friend it did not need to look twice before finding the most substantial friend it has discovered in the course of this war. The government could not have procured the needed timber for war uses if it had not gone directly to lumber associations to get it, and thus it has been a great victory for the combination plan. There is power and efficiency in organization, and the government's former hostility and suspicion have been changed to approval and thankfulness. The little politician who spent his time trying to smell out something rotten in the lumber industry has lost his job, thanks to the war.

Timber for Ships

SOMETHING IS WRONG SOMEWHERE with the shipbuilding program. It is charged that timber for shipbuilding cannot be had in time or in sufficient quantity and that the wooden ships cannot be had and steel must be substituted. In the face of the bureaucratic muddling and the incompetence shown in the attempts to supply guns and clothing for the armies, a person is excusable for believing that the trouble in the ship program is not due to lack of material but rather to lack of executive ability in some of the bureaus that have the matter in charge. There is plenty of suitable timber in the United States for all the ships wanted by this country for the next hundred years. If this timber shall not be put to use there is poor management somewhere. There may be differences of opinion as to where the fault lies, but it does not lie in the timber supply in the forests, and it is difficult to believe that it lies with the sawmills or with the lumbermen. There are 40,000 sawmills in this country and plenty of men to operate them, and it sounds suspicious to be told that the wooden ship schedule cannot be put through for want of timber.

Too much red tape is probably what is the matter; too much incompetence where it can do the most harm; too many people on the job who are too little for the job; and too little elbow room for those who could make business move if they had half a chance.

The Great Experiment

ONLY A TRIAL WILL DETERMINE whether government operation of the railroads will accomplish what is expected of it; but there is reason to believe that improvement in transportation will soon appear. So far as the lumber situation is concerned, the first betterment may be expected in the breaking of embargoes which have so greatly interfered with shipments. The government has power to do that, where separate railroad companies were helpless. The railroad dictator can take cars from anywhere in the United States and rush them to the points where needed worst. He will not have to ask permission of anybody. Individual companies had not that power. No road could take another road's cars without bargaining for them, and the process of reaching an agreement was slow and difficult, while the congestion continued and the embargo remained.

Most embargoes have been in the East where traffic is heaviest and the supply of cars inadequate. It may be expected as one of the first moves by the dictator that the congested areas will be supplied with more cars. The car supply will be shifted from place to place where most needed, and individual railroads will have no say in the matter.

A good point in the arrangement is that the trained officers and employes of the various roads will remain at their present posts. This guarantees competent management and labor. They will work

under the dictator's general orders, but otherwise their duties will remain about the same as before.

Danger that transportation will be tied up by strikes has been lessened. If there are strikes, the government will have to deal with them. It may be expected to deal justly with the demands of employes, but it will see to it that the wheels do not stop. If a foolish and stubborn strike should undertake to tie up the roads, trains would be run by military force, just as airplane stock is now being cut by military force on the northern Pacific coast.

The question of priority shipments, or the regulation of transportation of essentials and non-essentials, can be better handled by the dictator than by the roads separately. The government has a sympathetic and friendly public at its back in this experiment of managing the railroads, and that will make the task easier. Most of the roads are not averse to having the government take control and assume financial and other responsibility in these times of trouble. If it is a step toward government ownership of railroads, it is a very short step, and there is no reason to believe that it will be followed by any other step in the same direction.

Conscription of Property

THERE HAS BEEN TALK that the government may and should conscript property, the same as it conscripts men for the armies. Sawmills, railroads, and coal mines have been mentioned often in this connection. There is no question of the government's power, under the law, to take possession of property and use it to help carry on the war; but there is question of the wisdom of doing so, except when the emergency is urgent and great.

The conscription of producing properties and taking them out of the hands of their owners and managers is impracticable and would border on business folly in most instances. The government is not in a position to assume their management because it has no staffs competent to operate them, and after seizing such properties it would be under the necessity of arranging with the present owners to go on operating them; and in doing that it would have to make terms which would enable the management to provide working capital, satisfy wage-earners, make improvements, repairs, and replacements; for without these the properties could not maintain the high standards necessary to meet the government's demands.

To take over private property to be operated for government purposes would involve taking over the managers also and having them carry on the work on account of the government, but this is precisely what the managers are now doing, while keeping possession of their own properties; and experience has shown that, as a general rule, the most satisfactory results are obtained under private management of industry. It gives an incentive to individual effort, promotes progress, and stimulates efficiency.

The seizure of property by the government would neither put money in the treasury nor increase the supply of such articles as the government needs. Some advocate that the seizure take the form of increased taxes; but a tax so heavy that it could not be paid out of current earnings would reduce the working capital of industries at a time when they need it all in order to produce to the utmost. To meet such a tax they would be compelled to borrow, thereby impairing their credit, and they might be forced to sell their property at a time when there are few buyers. That would produce panic at a time when the highest confidence and greatest efficiency are needed. The country's salvation in this war depends upon the greatest industrial output, and any policy that would disturb this, or lessen it, would be injurious and unwise. It ought not be attempted except as a last resort.

It is your duty to yourself, your industry and your country to attend the winter meeting of your association. The nation's industry is against the test; the lumber industry is vital to our country's future. But the problem of its complete mobilization in the national cause and of the equally important task of guarding against uncertainties that might vitally affect it must be solved by you. These meetings give the fortunate means and at the psychological time.

Occurrences at Washington Interesting to Lumbermen

Personal Mention and the Activities of Various Boards and Committees

The first government order received by the Northern Hardwood Emergency Bureau was for 122,000 feet of red birch, so called, by the government, to be used in making gunstocks. About 400,000 feet of this material is understood to have been purchased by the ordnance bureau on the recommendation of the director of lumber. It will be used if necessary when there is a temporary shortage of black walnut owing to muddy country roads in winter. There is no intention to replace walnut by birch as gunstock material. There is an ample supply of walnut, but there may be temporary shortage owing to the difficulties of rural transportation.

The Northern bureau will distribute its birch order among its members as other lumber emergency bureaus have been doing with orders placed with them by the government. The remainder of the 400,000 feet of birch, which is said to be sufficient to make 50,000 gunstocks, was placed in a number of orders with lumber concerns in Chicago, Buffalo, Philadelphia and other cities. The material is thoroughly dry and therefore can be used immediately. It is 2½" stock, 8" and wider, 10' and longer, common and better.

It is stated that the Southern Hardwood Emergency Bureau has handled orders since Mr. Pritchard came here, for 2,500,000 feet of lumber for various purposes.

H. A. Webster, representing the War Service Committee of the veneer and panel industry, has taken room in the southern hardwood bureau offices. The industry is reported to be not yet fully organized for war service and complete information is not at hand as to what will be wanted of it.

The walnut and pine industries are believed by lumbermen in touch with both of them to be better organized for war work for the government than almost any other industry of the country. The pine people and hardwood bureaus are reported to be giving real service to the government.

Experts are busy with airplane specifications with a view to reducing the number of parts and different kinds of materials needed for the construction of air machines. The standard signal corps machine requires thousands of parts including screws and nails, and excluding them and the engine, 200 parts are required even if built-up sections be taken as a single part. Among other things 57 square feet of veneer, 244 feet of spruce, 58 feet of pine, 31 feet of ash and 1½ feet of hickory are required.

Major Charles R. Sligh of Grand Rapids, Mich., who was formerly in charge of the wooden section of the signal corps in connection with the production of airplanes, is to appear before the Senate military committee in connection with the investigation of the signal corps and the aviation program to tell what he knows about the wooden end of the job of furnishing airplane materials.

It is reported that the Grand Rapids Airplane Company and the St. Louis Aircraft Company are to get, if they have not already gotten, government contracts for airplanes.

There has been so much trouble about transportation that certain lumber concerns and woodworking plants are reported to have adopted the plan of not cutting stuff unless assured of cars to ship it in. Some concerns have had so much difficulty getting materials and shipping products that they fear they are considered unsentential.

Prospective Lumber Demand

Under government railroad operation it is predicted that a great many freight cars will be built, which should increase the demand for lumber. Several bills have been introduced to provide for large fleets of government-owned freight cars and several hundred million dollars may be expended in this way.

Another government demand for lumber is in sight as a result of reports that \$50,000,000 is needed to build barges for handling freight on the inland waterways and coastwise waters of the

country. President Wilson and the shipping board are taking up this matter, with a view to relieving the railroads.

The Baltimore depot warehouse, Aberdeen, Md., army artillery proving ground, Arcadia, Fla., aerial coastal station, Raritan River ordnance depot, and various other new government military construction projects have been absorbing millions of feet of lumber from the pine bureaus.

Government housing operations are being taken up in earnest. Administration officials have drafted bills for submission to this Congress authorizing the expenditure of government funds to provide houses for workmen employed in ship yards, munition factories, and other war production establishments. It is proposed to create a housing commission which will co-ordinate with the needs of the war, navy and shipping board in the matter of housing. The shipping board alone needs \$35,000,000 to provide living quarters for shipbuilding workers.

The construction of houses here for government employes is rumored, also the construction of more big buildings for the government departments and of \$90,000,000 worth of warehouses and munition plants for the ordnance department at various localities. So zealous have lumbermen been in shipping material for government construction that too much lumber has been shipped here for building the War Annex. As it has been bought and the freight and hauling charges on it paid by the contractor, the government will reimburse him.

Retail lumbermen from Philadelphia, Newark and other eastern points have been here recently talking with Mr. Edgar of the Council of National Defense and the Federal Trade Commission regarding their costs and prices on lumber bought by Uncle Sam for emergency uses. The retailers are reported to ask \$20 per 1,000 feet more than the manufacturers' bureaus have been selling to the government for. The price paid will be based largely on the cost, it is understood, and that is why the retailers have been referred to the trade commission, which is studying costs in the lumber trade.

Many million dollars more for aviation, the construction of aviation fields, schools and stations, and of airplanes for guarding the United States, the Panama Canal and American insular possessions are asked of Congress by Secretary of War Baker in a recent estimate. Millions of feet of lumber will be ordered for these purposes when the proposition is approved by Congress.

The United States Employment Service is being utilized to obtain many lumber workers and wooden ship builders, it is announced.

Secretary of War Baker in his report for the last fiscal year says that 450,000,000 feet of lumber was bought for the national army cantonments. "Standardization of sizes saved from \$5 to \$6 per 1,000 feet on lumber and a further saving of from \$3 to \$11 over prevailing prices was effected by the lumber subcommittee of the Council of National Defense."

The report of the quartermaster general shows that during the last fiscal year he purchased 5,250 handles and 40,000,000 tent pins and nearly 4,000,000 tent poles.

Wooden Ship Matters

There have been developments of interest to lumbermen generally in connection with the shipbuilding situation recently. The Senate committee on commerce has been holding hearings in an investigation of the shipping program and of the shipping board. After several officers of the board on the witness stand banged the lumbermen, and especially the southern pine manufacturers, for alleged shortcomings in the matter of contracts for wooden ship material, Chairman Hurley of the board announced that he favored building wooden ships and he is boss; it was learned that contracts for thirty more wooden ships are under negotiation in

the shipping board; Theodore Ferris, naval architect of the board, stated that he always found the lumbermen helpful in co-operating, and that he believed and hoped that wooden ships would continue to be built, owing to the war emergency. F. L. Sanford of Zena, La., submitted facts to the committee showing that the southern pine men, not only had not fallen down on the job, but had been shipping material ahead of the time required.

Mr. Sanford made a good impression upon members of the committee, some of whom admitted that they had not been fully advised before. Mr. Sanford said that he did not think the charges were made with a view to shifting the blame for the delay upon lumbermen, but because those making the charges were not well informed as to just what the lumbermen had done. He then reported in detail the enormous amount of work done by the lumbermen in forwarding the shipbuilding program.

The board and the fleet corporation were recently sued by the National Timber Company of Mobile, of which Mr. Eichberg is reported to be the controlling factor, for alleged breach of contract on which account \$121,000 damages are sought in a District of Columbia court. The suit says that the National Timber Company got a contract August 3 for a quantity of oak timber to be used in place of pine in government wooden ships, which order was canceled August 21 without valid reason and after the company had spent several thousand dollars in preparatory work. The unofficial answer of the shipping board authorities is that about that time there was another change in the wooden ship plans and specifications, when it was decided not to substitute oak for pine. The reason, it is said, was that marine architects thought the greater weight of the oak would disturb the equilibrium of the ships as originally planned to be built of pine.

Boxes Preferred for Butter

Owing to the shortage of stave material and transportation problems many creameries are having difficulty in securing butter tubs. The United States food administration recommends that boxes be used in place of the familiar tub where box materials are readily obtainable. Butter can be packed in boxes at about one-third of a cent per pound less than in tubs. Boxes ship as well as or better than tubs, and trade prejudice is the only reason they are not more generally used. No doubt there will be quite a quantity of butter required by Great Britain through the coming season and the British much prefer the boxes to tubs. The food administration is very desirous that all creameries and butter factories co-operate to the fullest extent possible in the use of boxes in order to relieve the butter tub shortage.

Airplane Factory At Work

The naval aircraft factory erected at the Philadelphia navy yard is completed and in operation. This plant, which covers three acres, was begun in August, the structure completed in November, machinery installed and the keel of the first flying boat was laid ninety days after building work was begun. The plant, with equipment, cost about \$1,000,000.

The plant now needs 2,000 skilled workmen to operate at capacity. Almost every type of craftsman can help in some of the many kinds of work necessary to make seaplanes. Machinists of all kinds will be needed to make and assemble the parts.

There is very skillful woodwork to be done in creating a flying machine, so there is a keen demand for cabinet makers, pattern makers, boat builders, joiners and millmen of all kinds. Women can sew the covers on the wings and perform some of the lighter woodworking operations. It is expected that, owing to war conditions, several hundred women will be employed. A good many laborers will also be required.

The need is urgent, and it is hoped that hundreds of skilled workmen will register at the Board of Labor Improvement at the Philadelphia navy yard for work.

This factory will not only produce a portion of the aircraft needed by the navy, relieving other manufacturers for army work, but will enable the navy to conduct experimental operations without clogging the wheels of production in private plants and to ascertain the costs of aeroplane construction, which will aid in the adjustment of prices of aeroplanes.

Wood for Fuel

Wherever it is at all practicable the State Fuel Administrators are doing all that is possible to popularize the substitution of wood-fuel for coal; and this has been found to afford striking and much needed relief in many states. Harry Flood Byrd, state fuel administrator for Virginia reports that while the fuel situation in that state is critical there has been no actual suffering and no important industries have had to discontinue operations. After conference with the state highway commissioners and the superintendent of the penitentiary, it has been decided

to utilize the thirty convict camps located throughout Virginia for the purpose of cutting fuel wood for public consumption and to relieve the coal pressure.

No charge will be made for the labor of the convicts, and the distributions of the wood will be made through the local commissions to the poor of the different communities. The cost will not exceed \$2 a cord and one cord of wood is equivalent of half ton of coal. If the experiment proves successful each camp will be instructed to cut 100 cords of wood making 3,000 cords in all. If this work does not seriously interfere with the work on the public roads it is probable that much more will be cut later.

Indiana, through its state fuel administrator, Evans Woollen, has been making a vigorous campaign for the substitution of wood for coal; so vigorous that in many of the counties the fuel administrator and the coal dealers are refusing to sell coal to farmers when it is known that they have an available supply of fuel wood. There are three campaigns on in Indiana, each urging the use of wood for fuel. The state forestry department is giving the matter attention and showing not only where wood may be obtained, but also issuing instructions as to how coal burning stoves may be made to burn wood with little expense for alterations. The Boys Working Reserve is responsible for the organization of many "saw buck clubs" among the boys of the rural schools. These are in addition to the campaign of the state fuel administration which has two phases; general educational publicity and more definite and specific work through the county fuel administrators.

Officers Appointed

The Adjutant General of the Army has announced the appointment of Carl A. Libbey of the Hammond Lumber Company, Eureka, Cal., as first lieutenant, Engineer Reserve. A number of additional assignments of officers to the 20th forestry regiment have recently been made.

Personal Mention

Joseph O'Neil of St. Louis has resigned from secretaryship of the lumber director here and gone home. E. A. Smith of New Orleans took his place.

Charles Edgar of the lumber director's office returned from Hot Springs, Ark., where he attended an annual meeting of the Wisconsin & Arkansas Lumber Company.

With the beginning of the year's operations many lumbermen who have been here on government business are back from holiday trips. Mr. Pritchard came back from Memphis, Roy H. Jones of the Northern Hardwood Emergency Bureau from New York, H. A. Taylor and C. H. Worcester of the lumber director's staff from Buffalo and Chicago, respectively.

Gen. L. C. Boyle is planning to open an office here and make the national capitol his headquarters in looking after lumber interests before the trade commission and other branches of the government.

Fish Shows Great Activity in New Bureau

Frank F. Fish, secretary of the National Hardwood Lumber Association, has sent letters to about 2,700 manufacturers or owners of hardwood lumber in the United States, acquainting them with the regulations governing the methods of the War Service Bureau in purchasing hardwood lumber for the government's war needs. Nine hundred of Mr. Fish's letters went to members of his association and 1,800 to hardwood lumbermen not members of the association.

The bureau confines its activities to material intended for the United States government or its allies; and it deals with manufacturers of hardwood lumber, or with owners of such lumber. The circular accompanying Mr. Fish's letter enters into the methods and procedure to be followed in selling to the government and in the distribution of orders among those prepared to supply material. Provision is made for keeping tab on the kinds, quantity and location of available lumber, so that the government may at all times be informed of stocks, and so that orders can be filled promptly.

Price quotations by the bureau on specific inquiries or requisitions shall show:

- (a) The name of the manufacturer or manufacturers by whom the shipment is to be made, to be furnished within three days after placing of orders.
- (b) The point from which shipment is to be made (or respective points of shipment in case more than one is involved).
- (c) The price per M feet on each item f. o. b. at such point or points of shipments.
- (d) The tariff rate to point of delivery specified.
- (e) The estimated weight of the material of each specification.
- (f) At the election of the manufacturer, or when requested by the director, the price delivered at destination. (Quotation of delivered price does not alter necessity of disclosing point of shipment and freight rate, since the source of supply in relation to car supply and price must enter into the question of approval.)

Hitting the Sawdust Trail

WAITING FOR BUSINESS

As I visited the various operators in the big cities and the manufacturing districts the past two or three weeks, I found business has been very peculiar. On account of the lack of cars many operators are not trying to sell anything because they cannot promise delivery. Government orders, of course, with a priority ticket, are being taken care of, as Uncle Sam, in his own way, if he considers he wants a car he gets it. I was talking to one operator recently who made a special appeal and got a bunch of cars, but before they could load the cars, Uncle Sam's right of way man came along and said these cars belong to Uncle Sam, and bang go the cars.

However, everybody is looking forward to benefiting from the elimination of priority orders, and the letting up of the stormy weather will help business, and there is scarcely anyone who does not believe that 1918 will consume as much lumber for manufacturing purposes as under ordinary circumstances, with the possible exception of the sash and door trade, and I think we will wake up some morning and find that the cities will begin a speculative building game. It may be a few months and it may be only a few days when spring opens up.

By looking at the bank statements, the indications are that in the large centers the deposits periodically drop, but that is an indication in most cases of utilizing cash for stock in hand and stock en route, and this reminds me further that stock en route and stock in the yard, ready for shipment, has tied up a good deal more money than people imagine. Last spring when we figured what would come to us, the actual laxity in the movement of lumber due to lack of motive power, we discussed the matter with several bankers, and they at that time figured on being in shape to take care of their customers because of the then depleted car supply.

CAR SHORTAGE COSTS MONEY

In checking up the annual statements, several things have developed to show that most people did not have any cost sheet. The overhead and handling bills have increased because of not being able to maintain a full log supply to keep the mill running on regular schedule, and in this connection must be considered the impossibility of getting an adequate supply of cars, particularly box cars. These conditions have resulted in various losses, which are added to the regular expense account, such as the regular inspection force—men who draw from \$125 to \$200 per month, who have nothing to do; then, too, when the mill is not running steadily, the best pilers and the men of long experience get scattered. Naturally, there isn't so much work for every one, and the men do not have regular work in their proper position where they had a particular niche to fill in the handling of lumber, which all adds to the cost.

This shows up pretty clear in one place, and that is oak, where the present prices, with the exception of thick oak and car material, are not what they should be. It costs many mills from \$2.50 to \$3 to yard this lumber, and it shows a big increase over a year ago. Somebody has got to pay for this. It seems that the oak folks in many cases have overlooked this as they have paid the money out, and it lowers the margin of profit. Of course, the car stock and thick lumber has been in unusual demand, and the prices advance accordingly, but FAS plain oak, for instance, or even quarter-sawed oak, is selling entirely too cheap. Of course, there is not much demand for quarter-sawed material, but I do not think there is much stock. There are a lot of people who quit quarter-sawing. Sooner or later someone will wake up and find that firsts and seconds are in good demand.

CONCERNING THE WISDOM OF KNOWING WHAT YOU SHOULD CUT

There are a lot of folks who went to sleep on their rights this past fall, although *HARDWOOD RECORD* particularly has been proclaiming from the housetops that prices were too low, that there was a big demand, and that there would be a larger demand. This is particularly true of the large number of orders for green stuff. Several operators were discussing the situation of the future, after this unusual government demand slacks up a bit for thick lumber and the result. You are taking a gambler's chance probably in letting your stock run lop-

sided to thick lumber, but this demand will keep up for some time yet unless the allied governments know a great deal more than the plain citizens do, and the war is to be over within a short time.

The more development there is in the airplane and shipbuilding, the more clear it becomes to the hardwood operators that the original idea that little hardwoods would be utilized has turned out to be a myth. In the first place, more walnut is being bought and used than ever before. Of course, they are losing a great deal of time as to what they are going to use because of the necessity for a lot of red tape in order to get appropriations through, not only in Congress, but after the money has been put to the credit of the department, the specifications checked, and even after contracts have been awarded. The veneer demand, for instance, in checking up the list of stock to be figured on, shows a demand for 400,000,000 surface feet to be utilized for ships alone. Local planing mills and sash and door and panel plants should get mighty busy on this stuff. The facts are this is a Godsend to the sash and door fellows who have been running short on business for quite a while.

AN ENTERPRISING HARDWOOD DISTRICT

Helena, Ark., U. S. A., located on the Mississippi river, with transportation facilities not excelled by any internal manufacturing town, including the Yazoo & Mississippi Valley R. R. (I. C. R. R.), St. L., I. M. & S. and M. & N. A. railroads, has more real timber adjacent to it than practically any other hardwood manufacturing town in the South. It has become such an active center that they have decided they would present their card to the consumers of hardwood through the columns of *HARDWOOD RECORD*. The first card is in this issue on another page. They will tell from month to month all about their timber facilities, and the fact that they are manufacturing more lumber, veneers and wood products and more varieties than any other market west of the Mississippi river. Like everybody else in the South they are affected more or less by the short equipment of the railroads in the Southwest, yet they have been able during this unfortunate car situation to take pretty fair care of their customers. The variety of the product of 150,000,000 feet of logs cut annually—lumber, veneers, box material, cooperage stock, both tight and slack, veneer panels, etc., makes it a most desirable market for the large buyer to be in touch with, and a visit to Helena will convince any one that it has become some lumber market, with its nine sawmills, six cooperage stock operations, six veneer plants, four box factories and two hoop mills.

We had hoped to use a picture of Helena, but an illustrated story at a later date will tell more of how the plants in that section are located at Helena and West Helena. Within a hundred miles east and west there are a hundred hardwood mills that ship logs from the North, West and South, and some logs are shipped in from the East. While gum and oak predominate, ash, elm, hickory, cottonwood, cypress, holly and almost every hardwood grown in the South can be had, and is manufactured in the market. Box shooks, elm hoops, staves—oak, elm and cottonwood, tight staves and heading and shooks for export are manufactured, aside from the enormous production of figured hardwoods, veneers, etc. The timber holdings of the operators in this section probably amount to 2,000,000,000 feet.

Helena at present has a population of about 15,000. It has improved materially within the past few years, and while it is essentially a business town, the people get a lot out of one another's society. The streets are well paved, the city has a good water supply, and shows a health record equal to any city in the United States. Within the past year two new depots have been completed. Helena is the one town on the map, outside of Vicksburg, Memphis and Cairo, that has the advantage of all the river tonnage going south, and the possibilities of water transportation in so far as our large rivers are concerned are better than any other part of the United States, and if we ever utilize our rivers before we die, Helena's river advantages will prove of great benefit for receiving raw materials, such as steel, iron, coal and other products.

Helena is the center of probably the richest farming country of the United States, and there are large cotton and rice plantations operated by lumbermen within a few miles of the city. In fact, there are so many things that can be said about Helena, that we can only mention a few of them in this issue.

A CONTRACT IS A CONTRACT

I was talking with a wholesaler the other day and he remarked that it did seem funny that some of the best northern mills of whom he had bought lumber for a good many years fell down on their contracts last year and were inclined to sell lumber, already sold, at new prices to a new customer and let the other fellow go. He said that "I know as well as anybody that they sold my lumber to somebody else, and also know that I could pull them in court and make them pay the difference between what it was sold to me before the advance of prices. But what's the use? A man who sells something and the price goes up, there is no reason why he should try to get out from under the contract, although prices have gone up so fast and a lot of people were stuck with contracts for from \$5 to \$10 a thousand lower than the lumber was sold for at any time in the past six months. A little consideration by both parties probably will adjust these matters and we believe would be benefited by that adjustment. But when a man just flatly sits down on a contract, it is all wrong."

I was talking with a consumer the other day and he said: "What is the matter with that fellow down in Mississippi?"

"Why, he is a good man. Always fills his contracts."

"Well, he just ducked and fell down on some stuff he sold us. He gave as a reason the fact that he is furnishing government stuff, because of his own solicitation, not because he was so patriotic, and because he could get more money for the stuff than at the price at which he sold us. Of course, I presume if I forced the matter he would probably ship the stock, but that don't do me any good. I bought the material for a certain use and I am a good purchaser. Neither the car shortage nor Uncle Sam's demand are sufficient reason for a man's falling down or not filling the orders which he accepted."

The scarcity of logs has created a shortage on oak flitches. The facts are that the veneer mills cutting this stock are having a great deal of trouble in getting figured gum as well.

When you can sell firsts and seconds beech at \$45, it's going some. Whether the top is going to be reached on a lot of woods, I don't know, but it does look like Mr. Supply and Mr. Demand are certainly making aristocrats out of a lot of woods that were in the "company" class.

I wouldn't be surprised one of these days to learn that mahogany will not be imported because of the shortage of ship room from Cuban and South American countries.

BY-WAY FREIGHT IN STORE FOR US

There is a good deal of speculation nowadays as to whether the aristocrats in America who have been living on flowery beds of ease, parlor cars, Pullmans, etc., will travel as much as heretofore. It is the general consensus of opinion that the government has already promised the traveling public that it would take a lot of trains off in order to utilize the engines for freight, and it has already taken several off of the eastern roads. That is, parlor cars and observation cars. Believe me, there will be less traveling by some folks if they have to ride in a day coach across the country. I see where there will be another hardship on the business men who really have to travel, and the culmination probably will be that a permit will be necessary in order to travel at all. It may inaugurate a new system of going back to the old days of doing business by mail, but with the telegraph and telephone and other present added facilities it wouldn't be so much of a hardship, but it will be something of a new institution which we will feel all the time.

AVERAGES IN PRICE

I have noticed some real salesmen because they bat like Ty Cobb, and the reason I put them in a class of their own is they are everlastingly selling their stock for a dollar or two more than the market. It means two things. First that the salesman knows what the market is and takes advantage of conditions in order to make his

averages big. In fact, I have one man in mind who I know will pay his salary out of his "overages." Some salesman isn't he? It is bound to do your heart good when you discover a chap of that kind.

I heard a good joke on a bunch of fellows the other day. I don't dare tell it. It is so good, it would make everybody in the trade laugh. It happened because certain men in the trade who subscribe to HARDWOOD RECORD don't read it. I would hate to tell you what this cost them, and while I love them just like a lot of chaps in the business, it did my heart good and made me think of the time when I was young and was told to do certain things, and then didn't. It cost them a lot of money, because they didn't look in the RECORD for real stuff off the bat.

I know there are a lot of busy men. Men who maybe can't read everything that is in all the papers, but it is easy to pick out someone in your office to go over the papers and check them for something that will interest you. Bye and bye you will be reading everything that is printed even if you have to take the papers home for Sunday. I tell you, fellows, in the lumber business you aren't reading your papers closely enough. There are a lot of chances coming your way and there will be a lot of fellows who will do business at your expense because they are up-to-date and can smell an advance of price, and you are so busy trying to get in your logs and keep your crew together that you overlook the importance of reading the HARDWOOD RECORD when it comes to your desk."

E. H. D.

Appeal to Spruce Lumbermen

What is expected of loggers and millmen in the Northwest by the production division of the government's aircraft board during 1918 is outlined in a statement and appeal by Col. Brice P. Bisque, head of the spruce production work, now being sent out to members of the Loyal Legion of Loggers and Lumbermen, which has 25,000 members in the Northwest.

The statement warns lumbermen not to pay heed to the "nonsense and malign whispering" of spies and traitors who spread the propaganda in the spruce production belt. Col. Bisque says:

The headquarters of this division look to you to prevent all acts of sedition on the part of employer, employee or others.

Your government asks you to produce 11,000,000 feet of spruce during each month of 1918. It also asks you to immediately make up the deficiency of the last few months when an average of only about 3,000,000 feet was obtained.

Every detail of our government's aircraft plan has been executed according to program, except the most essential, that of producing the timber that is needed. This high duty falls upon you and me. You are soldiers. A day's layoff is two days' work for the kaiser.

Manufacturers Prepare for Big Annual

Secretary F. R. Gadd of the Hardwood Manufacturers' Association of the United States announces that the program of the sixteenth annual meeting, which is scheduled for the fifth and sixth of February at the Sinton Hotel, Cincinnati, O., will be completed and ready for publication within a few days. He is very much gratified with the prospective offerings in the way of addresses and discussions, it having been possible to secure speakers who will keep interest alive every minute during the sessions.

The speakers already secured will talk on subjects of vital interest and concern to the industry and of immediate interest to business men.

Col. L. C. Boyle of Kansas City, counsel for the association and also for the National Lumber Manufacturers' Association and affiliated organizations, will talk on the subject of open competition.

Gilbert H. Montague of New York City will give his version of the question of "Business Competition and the Law."

The subject of "Trade Acceptances" will be discussed and explained fully by Charles A. Hinsch of Cincinnati, president of the American Bankers' Association.

There are other exceptionally interesting and valuable addresses in prospect, which will be announced in full in the next issue of the Record.

Memphis Prepares for Lumber Week

Spirited Interest Shown in Plans for Meetings There January 15-16-17-18 of the Traffic Association, Alluvial Land Association, Oak Association and Gum Association Respectively

Present indications are that there will be more lumbermen in Memphis during the annuals of the Southern Hardwood Traffic Association, the Southern Alluvial Land Association, the American Oak Manufacturers' Association and the Gum Lumber Manufacturers, in the order named, from January 15 to January 18, inclusive, than have ever gathered here at any previous time in the history of this centre. They will come from almost every part of the United States and arrangements are being made to see that they enjoy themselves while here.

Invitations have been mailed by the secretaries of these four organizations to every member, and these have been accompanied, in most instances, by programs showing what is in store for those who come. These programs have been arranged with much care and largely with a view to attracting a big attendance of lumbermen. The war, however, and the crucial problems which it entails, give an added interest, and it is believed that the state of war in which this country finds itself will prove the biggest incentive to attendance.

The overshadowing feature of interest during these annuals is the proposed consolidation of the American Oak Manufacturers' Association and the Gum Lumber Manufacturers' Association. These two bodies are planning to merge into one single organization that will perform the functions of each and at the same time cover a wider field than has been possible for each acting separately. The boards of governors of these two bodies have adopted the report of the committees appointed to work out plans for such consolidation and they, in turn, have put the matter squarely up to the members of each. It is anticipated that the merger plans will be adopted by practically unanimous vote, and influential members of the two associations are of the opinion that a big step in the direction of greater efficiency in organization work will have been taken before the two annuals close.

Addresses on topics of pertinent interest to every member of the four associations are scheduled and large accomplishments in behalf of the hardwood trade are believed to be very close at hand.

On the evening of January 17, the Lumbermen's Club of Memphis, in conjunction with the four associations, will entertain the visiting lumbermen at a banquet at the Hotel Gayoso.

The program of the Southern Hardwood Traffic Association, which has not yet been wholly completed, is given elsewhere in this issue of HARDWOOD RECORD. Those of the other three associations are given herewith:

SOUTHERN ALLUVIAL LAND ASSOCIATION

Greetings, John W. McClure, president.

Report of F. E. Stonebraker, secretary.

Report of John M. Pritchard, treasurer.

"The Dawn of a New Constructive Era," by Gov. Charles H. Brough, of Arkansas.

"Combating the Boll Weevil," by Prof. J. W. Fox, Scott, Miss.

"Possibilities of Alluvial Lands," by Bolton Smith, of Memphis.

AMERICAN OAK MANUFACTURERS' ASSOCIATION

Board meeting, 10:30 a. m., Hotel Chisca.

Luncheon, 12:00 m.

Greetings, 1:00 p. m., E. A. Lang, president.

Report of J. T. Kendall, secretary.

Report of R. L. Jurden, treasurer.

Report of Assessment Committee, C. L. Harrison, chairman.

Report of Advertising Committee, H. B. Weiss, chairman.

Report of Membership Committee, M. B. Cooper, chairman.

Report of Technical Research Committee, C. L. Harrison, chairman.

Report of Finance Committee, F. E. Gary, chairman.

Report of Resolutions Committee, Earl Palmer, chairman.

Report of Committee on Importation of Foreign Woods, W. H. Russe, chairman.

Address, Earl Palmer, Ferguson-Palmer Company, Inc.

Current Economic Features, Sidney A. Llaneklin, lumber expert, Babson's Statistical Organization.

Association Advertising, John Bemer Crosby, Chicago.

Report of Committee on Lumber, W. B. Burke, chairman.
Election of officers. New Business. Adjournment.

GUM LUMBER MANUFACTURERS' ASSOCIATION

Board meeting 10:30 a. m., Committee Room, Hotel Chisca.
Luncheon.

Greetings, H. B. Weiss, president.

Report of J. M. Pritchard, secretary.

Report of F. E. Gary, treasurer.

Report of Membership Committee, F. K. Conn, chairman.

Report of Rules Committee, W. E. DeLaney, chairman.

Report of Entertainment Committee, F. R. McFadden, chairman.

"War Orders for Hardwood Lumber and Their Effect on the Hardwood Lumber Industry," by J. M. Pritchard, secretary of the association and manager of the Southern Hardwood Emergency Bureau.

Report of Cost Committee, T. L. Hoskins, chairman.

Report of Advertising Committee, C. L. Harrison, chairman.

Report of Finance Committee, F. B. Robertson, chairman.

Report of Assessment Committee, J. W. McClure, chairman.

Report of Committee of Fourteen, W. B. Burke, chairman.

Election of officers. New Business. Adjournment.

Trying to Get Together

Two organizations have been collecting funds for the comfort of lumbermen and foresters in military service abroad, the American Forestry Association, Washington, D. C., and the Hoo-Hoo, with headquarters at St. Louis. Though both are working to the same end, their purposes are not exactly the same. The Hoo-Hoo's fund is for all American and Canadian lumbermen serving abroad, either as lumbermen or soldiers, while the American Forestry Association aims chiefly at comforts for the engineers, made up of lumbermen and foresters, but not fighting in the trenches.

As movement was recently started by the forestry association to absorb the activities of the Hoo-Hoo along that line and have all the work center in the association at Washington, where P. S. Ridsdale is proposed as treasurer and E. A. Sterling as secretary, with a new committee, on which the Hoo-Hoo is to be represented. The committee as proposed is as follows:

R. H. Dowman, chairman, representing the National Lumber Manufacturers' Association.

W. R. Brown, acting chairman, representing the Eastern Lumber, Pulp and Paper Manufacturers.

E. T. Allen, western lumber interests.

J. R. Moorehead, representing lumber retailers.

F. R. Babcock, representing lumber wholesalers.

E. D. Termant and W. A. Priddle, representing the Hoo-Hoo.

W. L. Hall, United States Forest Service.

C. L. Pack and P. S. Ridsdale, representing the American Forest Association.

E. A. Sterling, corresponding secretary, representing James D. Lacey & Co.

To be appointed to represent the lumber press.

A proposal embodying the foregoing plan has been sent to the officers of the Hoo-Hoo at St. Louis, and the reply by that organization accepts the plan as suggested. The forestry association announces that it has had in mind the extension of its plan of comfort to approximately the same scope as that being carried out by the Hoo-Hoo, but the final decision to do so must rest with a general meeting.

A machine should set fairly and squarely on every leg it has. The way many have of setting a machine down any way, anywhere, is very bad. Even the poorest one should have its foundations well prepared and be solid and level. No machine ever did or ever can do good and perfect work standing on a part of its legs. It is good policy to have a solid plank floor on top of the ordinary floor, the pieces put together with dowel pins and then trued up perfectly. This insures a solid foundation, which not only keeps the machine in place, but prevents the trembling resulting from any part of the machine being out of perfect balance. Every machine standing on a ground floor should have a concrete foundation.

"Marie" Sails Again

To you, who take tales of the out of doors; who know the feel of a gun in the hand of a good shot; to you who because good fellowship is a part of your own nature, can sense the feel of cordiality in the pressure of a man's hand, I would like to recount again the story of the second cruise of the Marie J., from the port of Vicksburg, on the Mississippi river, to the now locally famous Tennessee Bar, the one purpose behind the cruise, as last year, being pursuit of the wary Canada goose. But even though every last thing that could possibly add to the pleasure of again sailing with Capt. Dan seemed to have been done, the outstanding memory of the second hunt is

BART CAMOUFLAGED

that none of the thrills nor the pleasures of the first, a year before, were proven by repetition to be illusions. The trip this year was doubly successful because we felt that we were going back to old friends. The Marie J. seemed more like a home to us; the men who faced us across the table at night seemed more like old pals; the second trip to the same hunting grounds smacked more of the wanderer's return to the scene of his boyhood pleasures.

And so the very repetition which might bore you in print, imparted to the second trip with Capt. Dan a comfortableness which

SHERMAN HOUSTON POSES; POOR GEORGE WAS TIRED; LOU, SAM AND WILBUR; CAPTAIN DAN AND CAPTAIN TOM.

sweetened the excursion just as the color which you have smoked into your meerschaum makes your old slippers feel better and your arm chair more comfortable when you are drawn up in front of a friendly fire with a good dinner under your belt.

I hope you remember dear old Capt. Dan from last year. The captain has been "running" the lower Mississippi river for a good many years. Since we made the first trip with him he has hauled many a raft of logs down the river to the Anderson-Tully Company's big mills at Vicksburg. The Marie J., which the captain pilots, is one of Anderson-Tully's main dependencies for its supply of logs at Vicksburg.

MAINLY FRANK'S COAT

We were "all aboard" at dusk on a clear December day. Last year's bunch was all there, Bart Tully and Sam Thompson, Capt. Dan Quinn and his son, Capt. Tom, the hosts, and we fortunates, George Osgood, Wilbur Thistlewood, Frank May and the writer. And there were two newcomers, Lou Doster of association and Atkin's saw fame and Sherman Houston, whom everybody around Memphis and Chicago knows,—Lou is a novice and Sherman an expert goose hunter.

It is true that we didn't get so big a bag as last year, some forty-five geese being killed, but that in no way dimmed the en-

joyment of the trip. Probably we got more birds last year than any self-respecting hunters should bring home and so we stand squared on the two excursions. But the zest for the hunt was kept keen by the fact that the geese were there. It seemed almost as though there were more than ever. They seemed, though, to feel a foreboding of disaster on the advent of the "Marie." At any rate they exhibited their confidence in the old adage having to do with safety in numbers for invariably the breast of the river was covered with immense flocks which refused to move beyond the river banks. The resulting infrequent flights did not make the best of shooting and had it not been for our training in marksmanship the score might have been lower. But there is more satisfaction in dropping a bird dead from eighty-five yards than in having him sit on the end of your gun barrel and be compelled to chase him away with a club before you can get a shot. Thus might be contrasted last year's shooting and this. And because the chase was harder and the game more elusive, the bag was more keenly appreciated.

But were I to attempt to record and picture our hunt of last month

I could do no better than reinsert the story of the trip of last year and even though the subject is chuck full of interest I have not enough egotism to make me feel that my version of it would stand a second handling. But it has saddened me to find that there are still some who nourish a doubt as to our veracity of last year; who maintain the unreasonable contention that we could not, by any chance, have honestly come by the number of geese we brought back. It is to convince these scoffers that I am writing again. Surely when we freely confess to have gotten only forty-five geese this year you will not continue to have your unkind doubts of the authenticity of the figure you heard last year. We risk humiliation to convince you of our honesty. And if you should harbor ideas of your own as to Sam Thompson's shooting ability or Lou Doster's goose calling knack, those hunters are now fortified with records of accomplishments under fire which would convince you in spite of your utmost skepticism.

And so the second trip of the Marie J. is now a memory, but it is one so vividly pleasant that we, who were there, wish to share with you who were not, at least the spirit of the cruise. E. W. M.

Logging in Memphis Territory

Heavy rains have fallen in the Memphis territory during the past two or three days. All the snow has disappeared and the ground is in better condition for logging work than it has been during the past thirty days. It is thoroughly water-soaked, however, and the chief change in weather conditions is the passing of the extremely low temperatures which prevailed throughout the Mississippi valley region during the greater portion of December. Logging work, owing to the fact that there are so many logs on the rights of way of the railroads or in process of being delivered thereto, assumes less importance than usual, and for this reason hardwood interests are not complaining about inability to cut and haul timber normally. It is estimated that there are some 25,000,000 to 30,000,000 feet of timber awaiting transportation in the delta, and this, together with what is being turned over to the railroads' rights of way, is sufficient to last for quite a while. These figures do not take into consideration the hardwood timber awaiting transportation from points in Arkansas and from Tennessee and other states from which Memphis draws its hardwood supplies outside of Mississippi.

The railroads are falling down badly in the matter of furnishing transportation facilities for log handling. The Valley Log Loading Company reports a fair increase in loading during the last half of December, but it has taken off one of its loaders on the Yazoo & Mississippi Valley line of the Illinois Central during the past few days, which gives convincing proof that cars are not being furnished in anything like the quantity desired. There is likewise a great deal of timber that is subject to overflow during flood conditions, and the failure of the carriers to furnish cars is being emphasized as a possible source of serious loss through high water. Meantime, manufacturing operations are greatly curtailed as a result of lack of logs at the mills. "The mill will never grind with the water that is past" is an expression as old as the ages. It is equally true that they will not cut lumber out of logs which are not placed on their yards, and just now the whole manufacturing proposition hinges on the ability of the roads to deliver logs to the manufacturers and they are falling down in a most serious manner. It is generally believed that government control of the railroads will soon bring about a change for the better, but it is admitted that, in the meantime, hardwood output is likely to remain considerably restricted.

There is some increase in hardwood output since the new year began, but this is due principally to the warmer weather. Many of the mills, including some of those with fair log supplies, either partially or wholly suspended operations when temperatures were so low. Some ran all through the extreme cold, but they admit

that it was a strenuous proposition getting results from labor and from machinery alike. It is recognized, however, that normal weather will not materially increase hardwood output unless more logs are supplied by the railroads, with the result that every proposition leads back to the same broad fact: That the rate at which logs are handled will prove the determining factor in hardwood output.

Encouragement is taken from the fact that higher temperature, accompanied by rain, has caused disappearance of the ice which for quite a while blocked water transportation. The packets plying between Memphis and other river points are resuming their schedules, and river mills which have their own facilities for handling logs by water are resuming the use of these. This means that these mills will fare materially better in the matter of log supplies. The stage of the Mississippi and its tributaries, it should be noted in this connection, is quite low for this time of the year, and in some instances it is impossible to use boats and barges for log handling. Altogether the transportation situation is something more than a problem at this time whether by water or by rail.

In the meantime lumber interests here are heartily in sympathy with the movement of the government looking to increase in the use of water transportation facilities and they are closely watching every move in that direction. Memphis business men are co-operating with those from St. Louis, New Orleans and other river cities to the end that these facilities may be realized at the earliest moment. It is recognized on all sides that the sooner deficient railway facilities are supplemented by increased water transportation the sooner the traffic situation will return to something like normal efficiency.

Standardizing Truck Spokes

One interesting example of the tendency toward standardization all around is found in connection with wheels and spokes for motor trucks, especially for farm use. At a recent meeting of the vehicle people the farm wagon department recommended that the meeting go on record as indorsing the plan that truck wheels shall not be constructed of greater diameter than thirty-six inches, and that the front and rear wheels be made of the same size and interchangeable in order to create a marked distinction between trucks and wagons and to advance the utility of the truck. So far as investigations have been made there was found no perceptible difference in draft on farm trucks, because the rear wheels are a little higher than the front. As varying the size does not justify itself by any visible advantages, a standard size is preferable.

THE accompanying illustrations are a fair sample of the large stock (now 1,000,000') of 1/24" Sliced FIGURED RED GUM we carry in our warehouse.

We can furnish FIGURED RED GUM in Sawed or Sliced wood, any thickness. Prices quoted and information given on anything of interest to you.

These stocks are nicely and fairly sampled. You can get full sized samples of logs from us, sent by express prepaid, upon request. We also furnish—free—large panel, natural color, piano finish. Directions for finishing Gum in the natural or stained, accompanying each panel.

You should use FIGURED RED GUM in

Making Veneers With Lumber

Is Sawmill Man in a Position to Make Good in Veneer Production?

AN EXCEEDINGLY INTERESTING QUESTION from the standpoint of the man who has a large operation, with plenty of timber suitable for both lumber and veneer manufacture, is whether it is desirable to attempt to make both products, or to confine himself to the main issue of producing lumber. The question is not always decided in the same way, of course, and it is pretty difficult to reach a generalization on the subject on account of the necessary qualification introduced by local conditions.

The larger the business, the less inclined the manufacturer seems to be to get into the veneer trade. This may be due to the fact that the important thing in operations on a large scale is to get quantity production, and this is likely to be interfered with by the necessity of giving special attention to veneer making. For instance, if a log, when opened, is thought good enough for face veneers, it would be necessary to remove it and replace it with another without special characteristics. This might enable a profit to be shown by the conversion of especially desirable stock into high-priced veneers, but it would be at the expense of the sawmill, whose operations had been slowed up by the necessity of making the change.

"I would rather cut the stuff into lumber and let it go at that," said the head of a hardwood concern with six large sawmills and not a single veneer manufacturing interest, "than bother with the proposition of selecting the best logs or flitches for veneer manufacturing. That takes too much time and distracts attention from the main issue of getting out the lumber.

"True, I occasionally make a run on veneer flitches and cut them out in considerable quantity; but here again it is handled on a fairly big scale, and not as an individual log proposition. We select logs on the yard that look good for veneer purposes, and then we cut the flitches a carload at a time. In that way it does not require a great amount of interruption of regular operations, and can be handled conveniently."

There are some big lumber concerns, especially in the South, which have rotary veneer mills that are operated in connection with their sawmills. In this case, however, there is no real relationship, in the sense that material destined for the saws is likely to be recalled for conversion into rotary stock. Since figure is seldom the principal element in making rotary veneers, and quantity production is the cue, the two operations can be run side by side without serious interference with each other.

The matter of serving two masters, however, occasionally comes up to emphasize the fact that while making and selling lumber is very much like making and selling veneers, it is still a different proposition, and the two do not always go together well. There is a strong and suc-

cessful concern in the South which for a number of years operated both veneer and sawmills. The company was a big factor in both trades, and apparently made money out of both operations. Then it was decided to sell the sawmill, and it was disposed of to a concern which was engaged exclusively in making lumber.

The explanation was that the man at the head of the company was very much interested in the veneer business, and was not especially taken with the lumber proposition. He enjoyed the job of marketing the veneers, and knew exactly how to go after the big orders, while the lumber business seemed to be a harder proposition for him to handle. Here the purely personal element was probably the main consideration, for in spite of the fact that it would have been possible to continue marketing the lumber product without great difficulty, the company decided to concentrate all of its attention and capital upon the veneer trade. Incidentally, it has continued to do a whale of a business in this direction.

The argument in favor of making veneers along with lumber is hard to get away from, however, especially in localities further North, where the timber is higher priced, and everything possible must be gotten from every log. In connection with the manufacture of oak, for instance, there are those who contend that it is a good idea to make every variety of oak products under one roof so that each log may be manipulated to best advantage and nothing wasted by being used for a lower-priced product than it was fitted for.

From the standpoint of the log buyer, where the surrounding territory must be scoured for desirable timber, the proposition is greatly simplified when this is the case. Buying for an exclusive lumber plant, he gets some logs which might have been used to good advantage in making veneers; if he is working for a veneer manufacturer, he must take some stuff that is really too poor for the purpose. If the plant contains both lumber and veneer departments, he can take almost everything the timber owner has to offer with a clear conscience, knowing that it will be sent to the department which can use each log with best results.

Of course, if a lumberman gets hold of some logs which are especially fine, he can dispose of them or the flitches to a veneer manufacturer, if he so desires; or he can go ahead and cut the material into lumber, knowing that this will help to sweeten his stock and will make it easier to please his customers. That is not nearly such a tough problem as that of the veneer man who has a lot of scrubby logs on his hands which he can't possibly make veneers out of, it must be confessed.

Considerations of this kind are perhaps responsible for the methods used in the operations of one of the most

famous plants in the country, located in the Ohio Valley, and used for the manufacture of lumber, veneers and flooring. This concern has made its greatest success in the ability it has shown to get the best of the available timber, and this in turn has been due in many instances to the fact that it could dispose of the timber without waste in any instance. Veneer logs went into veneers, and logs that wouldn't make veneers into lumber.

In the smaller plant, such as is typical of the Middle West, the combination idea seems to be the best because it puts a premium on the personal skill of the manager of the plant. The man who has made a close study of forest products and who knows how to manipulate the output of each tree so as to get the most in material and in dollars and cents, is a real artist, and he finds his best opportunities when he has the facilities with which to manufacture various kinds of products, depending on the character of the logs.

In one such plant the owner does most of the log buying in person. He studies his timber carefully from the time he buys the tree until the logs are ready for the saw. He has a sawmill, a veneer mill and a dimension mill, and he looks over the possibilities of each lot of material not arbitrarily, but with an eye to the needs of his customers, for he has studied these just as carefully as he has studied the raw material.

He is distinctly not a quantity production man. He is not seeking to make just as many million feet of lumber as he can, but to make stuff that is good, to squeeze out of each log all of the footage of usable material he can, and to pile up gradually for the "particular trade" that he has won during the many years of service rendered the stock which he knows fits their needs most definitely.

Maybe this is not the ideal plant. Certainly it is not one in which the biggest profits are being made, but the chances are that the head of such an establishment gets a lot of enjoyment out of his work, and experiences in the intelligent direction of his manufacturing operations the satisfaction of knowing that the timber is being properly exploited.

The objection may readily be made to the idea of combining lumber and veneer manufacturing that to carry the plan to its logical conclusion would mean having veneer making facilities of great scope. That is, if the lumberman is going to make veneers in earnest, along with his thick stuff, he ought to put in rotary machines, slicers and saws, and do the thing up brown. In fact, the lumberman who is making veneers usually is contented with one kind. The southern mill usually goes in for rotary production, while saws are found in most of the veneer plants in the Ohio Valley and Middle West connected with lumber manufacturing. This suggests in a measure that the veneer business is regarded merely as a side line of the lumber proposition, even though it is true that many exclusive veneer concerns make but one kind of thin stuff.

In selling the product, there are advantages to the manufacturer who offers a complete line, since many con-

sumers are prospects for both lumber and veneers. This apparently simplifies the selling end, but on the other hand the application of veneers is so technical that a great many lumber salesmen do not attempt to handle a proposition of this kind. For the same reason the user frequently prefers to deal with a man who is known as a veneer expert rather than a combination lumber and veneer salesman. It is the familiar story of the specialist having more authority in his own field.

As suggested at the beginning of this article, local conditions must decide the question in a great many instances. For the lumberman who is supplied with a large acreage of low-priced timber, it would hardly seem worth while to bother with veneer production when he can get just about as good results, with less worry, by sticking to lumber. On the other hand, a man with limited possibilities as to timber, who must get his profit from the careful management of this resource, and its manufacture into the highest priced products possible, would doubtless find it to his advantage to have veneer making facilities at his disposal.

Having especially fine logs manufactured into veneers by custom mills is a plan which some concerns have used as a means of feeling out the trade. This is often disappointing, on account of lack of familiarity with the business. One concern which had some figured gum cut into veneers spent many months in finding a purchaser. The sales manager of the company knew the lumber trade thoroughly but he did not know the veneer trade at all. He was not familiar with the requirements of buyers, he did not know prices, he was out of touch with competitive conditions; and when he finally got rid of the last of the special lot of veneers he told himself and the other officers of the company "Never again."

Thus, while the tendency seems to be to specialize where practicable, it would be too much to say that the two propositions cannot be handled to advantage together. It is being done, of course; but the disposition at present seems to be to concentrate on one thing or the other.

The Germans Face Difficulties

Some idea of what the blockade is doing for Germany is obtained in an item from Antwerp, Belgium. In that city the Huns have seized all the mahogany pianos and furniture and have sent the stuff to the airplane factories, where the wood is used in making airplanes. A great deal of gluing and splicing are necessary before the material can be used; but the Germans are so hard put to it for material that they work up every possible scrap. The mahogany is wanted for propeller blades and for veneer panels for planes. It takes 500 square feet of panels for one airplane, and several pianos must be broken up to secure enough for one machine. It is no wonder that the blockade has aroused the fury of the Germans. It is pinching.

Sawed veneer does not amount to one-tenth of that produced by slicing and by the rotary process. Oak is the leading wood reduced to veneer by sawing.

The word "veneer" was formerly a synonym for something flimsy or sham, but that bad meaning of the word has now wholly passed out of use.

"Hartzell's Choice Walnut"

The Log Supply Is Vital

LOG transportation is so inadequate that many sawmills are today shut down. We are peculiarly fortunate in our location and local conditions which have resulted in an uninterrupted operation—the basic requirement of service.

And there are forty-one years of experience and a perfectly equipped modern plant behind the manufacture of these logs into fine

LETTERS FROM A PANEL USER

THE LABOR PROBLEM

Monroe, Mich., December 18.—The war will affect all lines of business as far as labor is concerned, and the panel manufacturer is not the exception. Labor will be scarcer and wages will be higher. It is futile to expect that the scale of wages now established will be reduced until we run square up against hard times, with consequent retrenchment. Until we are faced by lean years of economy, wages will mount upward.

What does this mean to you? It means that labor can afford to be more independent and that regardless of the wages paid better working conditions must be offered. It is not surprising in visiting glue rooms, say on a Monday morning, to find the odor in such departments strong enough to knock a man down. Or visit the veneering room and you will find it so hot as to be almost unbearable. The foreman will likely say that he must have it hot so as not to chill the glue.

What most panel and veneer factories require is industrial betterment. Manufacturers in other lines are giving their time and co-operation in forming plans toward better conditions for their employees. Every company working toward industrial betterment is considered aggressive and has a reputation of being among the leaders in its particular line of manufacture. Employees show a disposition to advertise their company by their appreciation of conditions which they acknowledge to be better than those their previous experiences have met with. It attracts the skilled labor of the market toward the company.

In endeavoring to create the best business in panels you are compelled to solve many problems, the most important of which is man. You may buy the very best equipment, but if you do not employ the right kind of help, men who will co-operate with you, failure in such cases will result.

It is to be regretted that so many manufacturers regard the men in their plants and factories as necessary evils, and the men in the office as the brain power of the organization. This is absolutely wrong. There is no place in the whole economy of the modern panel and veneer plant where greater efficiency is required, where the exercise of a high order of intelligence is in greater demand, or where ability to think quickly and act promptly is of more importance than at the head of the various mechanical departments. The heads of the leading and most highly successful corporations of today recognize this.

You will admit that every man in your organization must be efficient. There is but one way—they must all be satisfied. Every man is most efficient when his work gives him the greatest satisfaction—when he is doing the thing his Creator intended he should do. The progressive workman of today is interested in, first, mental and physical development; second, joy in doing it, and, third, a decent living. The man who is thoroughly satisfied with his job will be a money maker for you; the man whose whole being revolts at his task becomes a captious citizen, an inefficient worker and a meager earner.

The manufacturer who does not see the current of events, who thinks he can win with his own strength, is badly mistaken and is sure to be beaten in the race for commercial supremacy. It is the man who sees, the man who has a vision, the man who has light who is going to win.

If labor is antagonistic to you or you antagonistic to it, the antagonism cannot be removed by conflict, but rather by establishing the opposite of antagonism, which is co-operation.

Of all the duties of the business executive that of firing help is undoubtedly the most generally dreaded and most heartily despised. It is a function that affords no pleasure to any one, but occasionally must be done. A little investigation will usually reveal that if a little better hiring were done firing would not be so necessary. Of course, we should give the man every chance. When we do find it necessary to discharge the man, we should not do this cowardly, as is too frequently the case. The common prac-

tice is to hand the man his pay envelope with a slip, "Your services are no longer required," and he will have to figure out the reason for himself, something which he may be mentally and constitutionally incapable of doing unaided. We do not want to be small business men, nor do we want to be cowards. We should call the man to our office and tell him in a kindly way that for such and such reasons we are unable to use him. Wish him success and shake hands with him. Such a man will usually leave the office and say to himself, "I'm a chump, so and so is the finest man I ever worked for, but I didn't have sense enough to appreciate him." Chances are he may again ask for his position, and will make good. I know this, for I have handled many men the past twenty years.

At the present time any suggestion for improvement in conditions of laboring men or their wage is looked upon with skepticism, for which we cannot blame them. It is, therefore, up to the employer to establish faith and he must do so before he can get the sincere and intelligent effort of labor.

Mix with the men. I always do so and have found it not only pleasant, but also profitable. In the summer time we have picnics every few weeks, usually on Saturday afternoons, and have all sorts of fun. We usually pay the greatest part of the cost.

A. T. DEINZER.

Veneer Production by States

There is no easy way of finding out how much veneer is cut annually in the various states, because no figures of production have been compiled in recent years to show this. Men who are well posted in most matters concerning the veneer business sometimes miss the mark when they undertake to guess the relative quantities of veneer cut in different states. The latest accessible figures showing this are about eight years old. An age such as that usually puts statistics of production out of date, and doubtless those compiled in 1909 are out of date now; but since there are none later, they may be of interest and of some value, and they are shown in the table which follows. They include all kinds of veneers, sawed, sliced, and rotary cut:

State—	Feet by Scale	State—	Feet by Scale
Illinois	35,646,000	Georgia	6,980,000
Michigan	33,455,000	Texas	6,710,000
Florida	33,293,000	Washington	5,419,000
Wisconsin	31,737,000	West Virginia....	4,404,000
Indiana	31,472,000	Pennsylvania	3,691,000
Tennessee	30,574,000	Delaware	3,657,000
Missouri	27,365,000	Maine	3,637,000
Arkansas	26,116,000	Oregon	3,291,000
New York.....	24,218,000	Louisiana	3,164,000
Virginia	21,609,000	South Carolina....	2,944,000
North Carolina...	19,984,000	California	1,716,000
Kentucky	19,356,000	New Jersey.....	1,046,000
Alabama	14,565,000	Massachusetts ...	690,000
Ohio	10,985,000	All other states...	3,885,000
Maryland	8,796,000		
Vermont	8,013,000	Total	435,981,000
Mississippi	7,563,000		

Those best acquainted with the tropical hardwoods of South America are of the opinion that much very fine material for veneers will be found there. Rosewood is a sample of what those southern forests contain.

The war has brought high class veneer to the front in more ways than one. Five years ago no one would have thought of it as an airplane material; yet a single government order for such planes called for nearly a half-million square feet of first grade veneer panels made of mahogany. The wood must resist splintering, and mahogany is the best in the world for that. Bullets pass through it and leave only a clean-cut hole the size of the bullet. No splinters are sent flying. A great many strikes must be made before a plane made of mahogany can be shot to pieces.

Statistics of Veneer Production

Lack of Precise Details Are Notable in the Industry as a Whole

SEVERAL YEARS HAVE PASSED since the government compiled and published statistics of the output of veneers in the United States, and no statistics have been collected by any other authority. Consequently, persons who seek information along that line for recent years will seek in vain. Seven years ago the annual production of veneers required 435,980,000 feet of logs. Much more than that must be cut now, but how much more is a subject for guessing.

At the meeting of the panel and veneer manufacturers held in Chicago early in September, the subject of a census or statistics of production was brought up by Mr. Hicks, of the Forest Products Laboratory, Madison, Wis. His reference to the matter was in the form of an inquiry whether the veneer manufacturers wanted such a census made. The question brought no answer or discussion and the matter went no further, and apparently the subject was of little interest to those present. Many business men are prejudiced against statistics and can not see any good in them.

Lumbermen have had a census of lumber production made every year since about 1905, and they think it worth while to continue the work and to co-operate with the government in doing it. Some criticism of the lumber statistics have been heard, on the ground that they are not complete, and that they are not collected on the same basis in different years; many more mills being included in the figures in some years than in others. But, in spite of this, lumbermen go on, year after year, co-operating with the government in compiling and publishing figures showing the production of lumber by species and by states.

It may be presumed that when Mr. Hicks mentioned the subject of a census of veneer manufacturing, he had in mind a work to be carried out on the general plan followed in the lumber statistics, that is, a co-operative work in which both the government and the manufacturers would have a part; but not receiving any response to his suggestion, the matter went no further.

Every ten years the government takes a general census of all manufactures without asking for co-operation on the part of those who do the manufacturing. The agents of the government (the Bureau of the Census) collect all the data, thrash out the details in the form of cost, labor, material and percentages, and publish the results. Such a census as that will be taken in 1920, to cover the year 1919, and the reports may be looked for three or four years later. This is good as far as it goes, but it hardly takes the place of the special census made from year to year in certain industries. In the first place, the figures in the ten-year census are pretty old before they are made accessible to the public; but they fall short in

other ways, and principally in that they lack details which are looked after when the manufacturers co-operate and have a voice in planning and executing the work.

Lumbermen like to know every year what woods are cut into lumber, and the quantities, in the various states and according to various species. Veneer men cannot get this information regarding their industry, because

they do not take part in planning and carrying out the work. They might do so, however, if they think it worth while to request it and help do it.

This country has reached a stage in its history when figures showing details of production will possess greater value than ever before. It was once thought hardly nec-

essary to keep an itemized cost sheet of an operation, provided the business could keep going. That stage is past. Cost sheets are essential now if a manufacturer is to meet the keen competition with which he is faced. Figures which show the details of output are a sort of cost sheet useful to the whole industry.

Strength of Veneers

THE EXTRAORDINARY DEMAND for veneers for war purposes in boxes, panels, drums, electric batteries and numerous other articles, has brought out the fact that no adequate series of tests has ever been made to determine the strength of various woods in the form of veneers. The strength of all the commercial woods is well known, but in solid pieces only—not in sheets. Those who hitherto have carried out experiments to determine how strong the different woods are have had solid pieces to work with, and the thin sheets have received very little attention.

Veneers have been given such scant consideration in working out tables of strength for woods because they were not much used except in positions where strength was not a matter of vital importance. The situation is changing rapidly because the war has expanded the field which veneers are called upon to fill, and it has become necessary to know how one wood compares with another in strength.

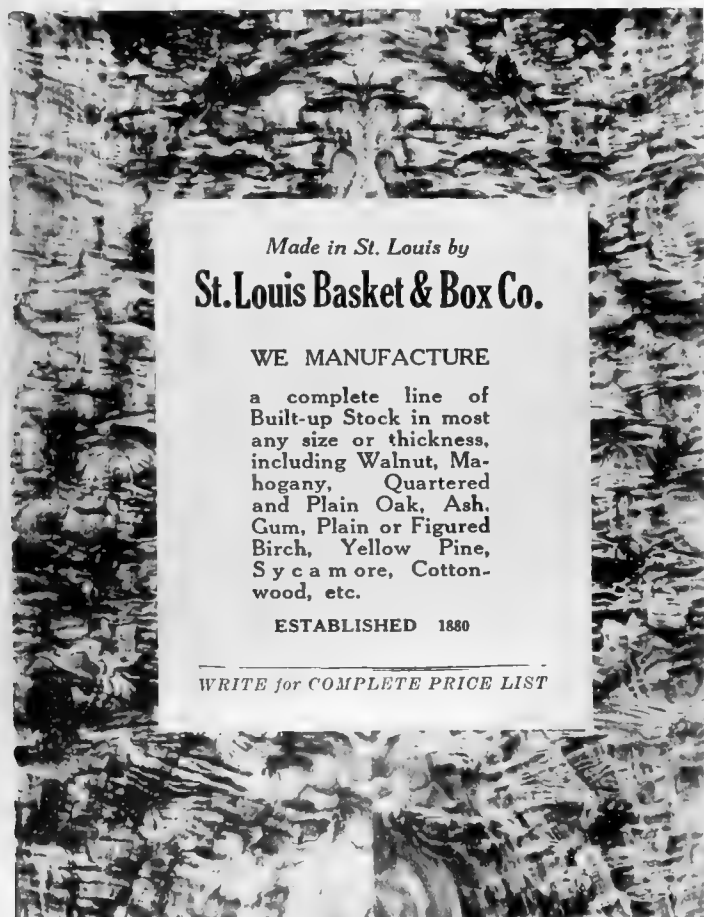

Sheets of veneer may be tested in different ways. The sheet may be bent with the fold parallel with the grain; or it may be bent with the fold across the grain. In the former case the sheet will split if the force is sufficient; but in the latter case a break will be across the grain. The sheet will not show the same resistance both ways. It will split more easily than it will break. In panel making it is customary to lay the sheets both ways so that the panel will not split.

Perhaps lists will speedily be made to determine the strength of veneer, and one wood can be compared with another, but that has not yet been done to any great extent. It is possible, however, to compare the strength of most American woods, not as veneer, but as solid wood. Very complete figures are available along that line. In the absence of better data, these figures may be accepted, and one wood's strength can be compared with another. The figures which follow are calculated from data published in Bulletin 556 of the Forest Service, issued last September, the latest and best available.

In order to make the comparison practical, yellow birch is taken as the basis of comparison, and its strength is placed at 100, and weaker woods fall below and stronger go above. The following twenty-six woods are fairly representative of the forests of the United States:

Wood	Strength		
Yellow birch.....	100	Cotton gum.....	85
Basswood	58	Red oak.....	90
Cottonwood	62	Douglas fir.....	91
White pine.....	62	Cherry	93
Yellow poplar.....	65	Beech	94
Chestnut	65	White oak	97
Red spruce.....	66	Longleaf pine.....	101
Hemlock	70	Sugar maple.....	106
Sycamore	76	White ash.....	106
White elm.....	80	Black walnut.....	110
Red gum.....	80	Cork elm	110
Cypress	80	Shellbark hickory.....	120
Black gum.....	81	Black locust.....	160

Probably three-fourths of the veneers manufactured in the United States are cut from the woods represented in the foregoing list. As already stated, the data on strength may not hold true for veneers in all cases, yet it is probable that the comparisons given above will hold in most instances. At least, a manufacturer who wished to produce panels requiring great strength would scarcely choose white pine, basswood and cottonwood veneers for the work, but would rather take maple, oak, longleaf pine or some other that shows strong in tests on the solid wood.

See Hope in Government Control

Lumbermen Believe Cars Will Be Better Distributed by One Head

Officials of the Southern Hardwood Traffic Association, Memphis, believe that government control of the railroads is going to bring about a decided change for the better in transportation conditions, as affecting the southern hardwood lumber industry, in the near future and they express themselves as well pleased with this somewhat radical departure on the part of Washington authorities. They point out the following advantages under government control:

First—Cars will be distributed without regard to ownership.
 Second—Motive power will be more equally distributed.
 Third—Traffic will move toward destination by the shortest and most direct route.

Fourth—Authority to say what commodities shall move and what shall not will be vested in a single man instead of in six representatives, as under the old regime.

J. H. Townshend, secretary-manager of the association, expresses the view that thirty days will be necessary before any marked change can be seen. In the meantime the association has thrown its weight directly behind the plan of much more liberal use of southern ports for the handling of export traffic. It believes that this will result in a great many more empties available to lumbermen for loading and that it will, at the same time, relieve much of the congestion now observable in the North and East and thus bring about a freer and less embargoed movement of lumber and lumber products to destination north of the Ohio and East of the Mississippi. The association is therefore urging all of its members to write to their representatives and senators at Washington appealing to them to work for increased utilization of ports on the Gulf of Mexico and the South Atlantic for handling export traffic.

Mr. Townshend has recently returned from Washington and he brings back the information that, in his opinion, the Interstate Commerce Commission will not, even if it makes an early announcement of its decision in the 15 per cent advance case, grant any increases which will affect rates on hardwood lumber shipments from southern territory.

Mr. Townshend recently appeared before the Interstate Commerce Commission and protested against the proposed increase in rates from Memphis to Pacific coast points and he expresses the view that the lumbermen can defeat this move on the part of the carriers. He has asked that all who have experienced, or who are now experiencing, competition from Japanese oak furnish the association with all details in connection therewith.

The association believes that all transit arrangements ought to be eliminated for the period of the war. These require that lumber must be shipped over the road bringing in the logs from which it was manufactured before the refund on the log shipments is available. It is pointed out, however, that lumber ought to be moved over any road that can furnish the necessary cars, without reference to the particular road which brought in the logs.

The association is much opposed to the elimination of cross-town handling of lumber and lumber products and will use its best efforts to prevent the railroads from putting this practice into effect. J. H. Townshend is looking after the subject. Other commercial organizations here are opposed to this measure and indications are that those who seek to eliminate this cross-town handling in any sort of equipment will encounter the most intense opposition from the association as well as from other organizations. An intimation of what may be expected along this line will be found in the action of the Lumbermen's Club of Memphis with reference to the embargo against the use of open equipment for cross-town handling of lumber put into effect by the Yazoo & Mississippi Valley railroad. This will be found in the report of the meeting of that organization, published elsewhere in this paper.

The Southern Hardwood Traffic Association also objects strenuously to the action of the Illinois Central system in forcing, by means of an embargo, lumbermen shipping lumber in open equipment to bulk head it. It has had the matter up with the officials

of that road and has been advised that bulk heading is necessary only in the case of dressed lumber and that it does not apply in the case of rough lumber.

Memphis railroads have appointed a committee of three, composed of superintendents, to make recommendations covering changes in operating plans under government control with a view to bringing about more effective handling of traffic. This committee has already made more than twenty recommendations, including elimination of cross-town handling and the withdrawal of reconsigning except on a substantially changed basis. Most of these recommendations are acceptable to the Southern Hardwood Traffic Association with the exception of eliminating cross-town handling of lumber and lumber products. This is opposed on the ground that it will work a serious hardship on most members and that in the case of a few of them it will mean practically putting them out of business.

There is still quite a notable shortage of flat cars for handling logs to the mills and likewise quite a scarcity of equipment for transporting lumber and lumber products to destination. Most of the mills are forced to operate intermittently while there is much complaint regarding delay in effecting shipment because cars are not furnished, as asked, for loading. As already suggested, however, lumber interests are inclined to believe that the machinery already set in motion by the government for more efficient transportation will soon produce results and they are therefore facing the future with increased optimism over the transportation problem as the new year opens.

Allied Purchases in the United States

A government report, dated December 21, and issued by the Department of Commerce, Washington, contains the following explanation of how purchases in this country for the allies are to be made:

For the information of American manufacturers and others desirous of selling materials to the allied governments, it is announced that arrangements were entered into in the latter part of August, 1917, by the Secretary of the Treasury, with the approval of the President, with the governments of Great Britain, France, Russia, Italy, Belgium and Serbia, whereby Messrs. Bernard M. Baruch, Robert S. Lovett and Robert S. Brookings of the War Industries Board were designated a commission through whom or with whose approval or consent all purchases in the United States of materials and supplies by or on behalf of these governments shall be made.

Under this arrangement these governments communicate their requirements for materials and supplies to this commission through their designated purchasing agents in this country, and the commission then uses its best efforts to obtain offers of the materials and supplies required at the best obtainable prices and terms, of delivery and otherwise, and submits the same to the purchasing agent concerned, it being no part of the commission's duty to prepare and sign contracts, or to supervise their execution, or to determine technical details, or to carry out the inspection of materials, all of which matters are cared for by the governments concerned.

The foreign governments have agreed not to make purchases in the United States otherwise than through or with the consent of the commission. The arrangements provide that nothing expressed or implied, nor anything done or omitted by the commission, shall impose any obligation or liability upon the United States whether to advance moneys, to establish credits, or otherwise. The purchasing commission, in carrying out the terms of this agreement is endeavoring to see first that the wants of the governments associated with the United States in the war are supplied as promptly as possible, and without interfering with the requirements of our own government. This necessarily involves the finding of a source of supply from which articles needed by the allies can be obtained without prejudice to contracts placed with the United States government for articles of the same kind, and in many cases it has been found necessary to develop new sources of supply—that is, to induce some one who has not been previously making the articles needed to produce them. Manufacturers who are producing or who believe their plants are in a position to produce supplies needed by the allied governments should make known this fact to the Allied Purchasing Commission, which is now located in the new and temporary structure housing the Council of National Defense at Eighteenth and D Streets, Washington, D. C.

Regularity of log supply and low cost of hauling are insured by water transportation. All the Crenshaw-Gary logs are hauled from the woods on their own cars and dumped at the river bank for loading onto barges.

Typical—not unusual gum.

Modern Hardwood Operations

Crenshaw-Gary Lumber Company, Memphis, Tenn.

One of the most successful southern operations is that of the Crenshaw-Gary Lumber Company. It is successful because of the personnel of the organization, because of excellent timber, and because of experience in proper manufacture.

While the general offices of the company are in the Bank of Commerce & Trust Company building, Memphis, the mill, as is common with Memphis companies, is located at the timber to be exact on the Sunflower river at Richey, Miss.

W. L. Crenshaw is president of this company; C. L. Crenshaw, vice president and F. E. Gary, secretary and treasurer.

The Crenshaw-Gary company has about 6,000 acres of excellent timber in Sharkey and Washington counties, but at present is logging only on the Washington county tract, preserving the Sharkey county tract (which is in close proximity to the mills) for such times as the Washington county holdings are unworkable because of floods or extremely bad weather.

The company operates two modern band mills at Richey and has unusually good facilities for supplying them with logs. When logging on the Sharkey county tract, the logs are hauled di-

simplicifying the logging problem.

rect to the mills by the company's own crews and equipment. The timber cut on the Washington county tract, though, is rafted by train to the river bank where it is dumped and reloaded onto barges, which are towed by the company's steamer to the mills, a distance of some sixteen miles. The company does its own logging with an equipment consisting of necessary engines, skidders, loaders, and rail equipment.

The company's operations at Richey are located on different sides of the Sunflower river. The plants and yards cover about fifty acres of ground, a large portion of which is of course allotted to the seasoning and storing of lumber. The plant at present in operation has a daily output of 40,000 feet, about sixty per cent of which is gum. Some of the finer gum logs are sold direct to the veneer manufacturers.

Though not the largest southern producer of hardwoods, the Crenshaw-Gary Lumber Company is one of the most aggressive. The organization is capitalized at \$75,000, and though formed but six years ago, carries a large pay roll.

But as it is the purpose of this story to introduce to you the personnel of the organization rather than to cite bare facts as to what it has and what it does, it would be well to tell something about the characteristics which have made these men successful.

Beginning with the president, W. L. Crenshaw, who really needs little introduction to those interested in hardwood lumber: He is the operating man and has behind him a varied and long experience in the handling of timber, logs and lumber. He has ridden logs in the muddy waters of the Ohio and has snaked them with horses through brush and stumps before the steam skidder was a factor in logging operations. He has laid out and blazed the way for the

There is a lot of mighty good lumber in this area. The Crenshaw-Gary Company is cutting the usual line of southern hardwoods, including oak and gum, of course, and has reason to be proud of its product.

The Crenshaw-Gary timber is quite famous for its quality.

W. L. Crenshaw and J. H. Shields and a batch of everyday logs.

initial rails laid into virgin timber, and has fired and knows the inward workings of cranky logging engines from the time when they were first introduced.

While today W. L. Crenshaw is a man of middle age, he can keep up with the best of them in climbing over log piles and cannot be "stumped" on any question propounded by the most practical of his woodsmen as to identity, size or contents of logs, or the best way of handling this or that part of the equipment.

Mr. Crenshaw typifies the busy business man who still harbors the spirit of young manhood, and it is this spirit which endears him to the employes in the woods and in the mills. Being one of them, he is able to get their very best effort.

L. E. Gary, who has charge of the selling, of the financial and the office end of the business, is the opposite type of man. He is quiet and conservative and has behind him years of experience in analyzing and meeting market conditions in various lines. Mr. Gary was born in Connecticut, U. S. in 1855. He began his long experience in the lumber business with the J. S. Stearns Lumber Company of Odanah, Wis., about 1895. In 1900 he with L. K. Baker, W. L. Guerley, John W. Gary, and J. P. Brayton organized the Baker Lumber Company, which operated at Turrell, Ark. The company there built a 100,000 feet capacity sawmill and railroad for logging and eventually cleared off 40,000 acres of fine timber. This company has cut out its holdings and is now practically out of business.

Mr. Gary became associated with Mr. Crenshaw in 1912, when the Crenshaw-Gary Lumber Company was organized. He is interested in several other sawmills, but takes no active part in the running of any but the Crenshaw-Gary Lumber Company.

Mr. Gary's analytical mind is an important factor in the success of the Crenshaw-Gary Lumber Company.

C. L. Crenshaw, the vice-president of the company, is the son of W. L. C. L.'s duty is to properly and economically turn out the stuff at the two mills at Richey. He is a man who has grown up in the lumber game and while his years, of course, would not permit of his having had the length of experience behind his father, he is demonstrating that he is thoroughly capable of handling an operation in a manner that would do credit to the elder Crenshaw.

The woods operations these days are an important factor. The Crenshaw-Gary company is well fortified in this department of its business, having in charge a man who knows how to get out the stuff, and who is perfectly capable of relieving the minds of the principals of any anxiety as to log supply.

J. H. Shields bears the title of superintendent of logging and has under his direct charge the entire log operation. Mr. Shield is a young man, unusually young, for one carrying his responsibilities, but he knows timber and his work is undoubtedly made more effective by the fact that he can ever find inspiration and pleasure in the fine tract which the company is cutting.

Incidentally, while we mentioned that a large part of the cut is gum, there is also a large quantity of very fine oak and some cypress, elm, ash and other minor species common to that territory.

The Mail Bag

B-1164—Wrong on Identity of Elm

Hardwood Record has received the following letter from New Zealand which may be of interest to some members of the trade, particularly the reference to elm:

Dunedin, New Zealand, Nov. 21, 1917.—Editor HARDWOOD RECORD: In reply to your suggestion that we could possibly keep you in touch with developments in hardwood trade here. We are afraid there is little to report at present owing to general slackness of trade, and great difficulty of importing timber. As you will be aware shipments of hardwood from New York to New Zealand have practically ceased owing to freight rate being so high, and we are obtaining all our oak from the East, freights being less than half those ruling from New York.

We do not obtain satisfactory ash, hickory, walnut, and chestnut, in place of American supplies however, and will be glad to have these timbers as soon as freight rate permits.

Is there a timber magazine published in Canada dealing with timber, on same lines as your publication, if so we should like to subscribe to same, as we desire to obtain a timber known here as Canadian elm, which apparently does not grow in U. S.

We have never heard of any U. S. firm producing built up three ply with one or both faces of oak, chestnut, or ash, but if you know of any reliable manufacturer who is producing this line, we would be pleased to have his name, as we desire supplies of such 3 ply.

Company.

B-1161—A Correction

Philadelphia, Pa., December 29.—Editor HARDWOOD RECORD: In your issue December 25 you make the statement that the Thomas E. Coale Lumber Company, Philadelphia, Pa., is re-incorporated under Pennsylvania laws, its capital being \$100,000. The facts are:

The Thomas E. Coale Lumber Company, a corporation of Delaware, owned a distributing yard in Philadelphia and felt it was to its advantage so as to keep its business absolutely straight, to sell its distributing yard, and it did sell same to a new corporation incorporated under the laws of Pennsylvania, namely, the Thomas E. Coale Lumber Company of Pennsylvania, but this does not take the place of the Thomas E. Coale Lumber Company a corporation of Delaware.

THOMAS E. COALE LUMBER CO.,
THOS. E. COALE, President.

B-1165—Government Wants to Hear from Manufacturers

The following letter explains itself:

Washington, D. C., Jan. 2, 1917. —Replying to your letter of 28th ult., we would be glad to have any individual manufacturers write us letters describing their capacity and ability to deliver any of the articles mentioned, particularly packing boxes.

HENRY C. PLIMPTON,
Captain Ordnance, R. C. Office of Chief of
Ordnance, Small Arms Division,
1801 I Street.

B-1162—Wants War Orders on Mill Work

The following letter might be of interest to someone having contracts for wood products for war work:

Lawrence, Kans., December 19. Editor HARDWOOD RECORD: Business is dull with us and we have wondered if there might not be some of the wooden articles which we could make in our plant. We have not been able to learn of anything we could make.

B-1163—Interested in Maple and Ash

Have you for sale any of the stock mentioned in the following letter:

New York, N. Y., December 29, 1917.—Editor HARDWOOD RECORD: Will you kindly send copy of your paper to our New York office as we are greatly interested in millwork.

At the present we are looking for No. 1 and No. 2 maple and No. 1 common ash in 4/4", 5/4", 6/4" and 8/4".

B-1166—Interested in Chestnut and White Pine

Lyons, Mich., January 1, 1918.—Editor HARDWOOD RECORD: I am considering starting up the old _____ Company of _____, Mich., and would ask if you could put me in touch with firms able to ship mixed cars of sound wormy chestnut and white pine lumber.

Clubs and Associations

First Regular Meeting of Memphis Club

The new officers of the Lumbermen's Club of Memphis were installed at the first meeting of the New Year held at the Hotel Gayoso on January 5, as follows: President, J. F. McSweyn; first vice-president, M. B. Cooper; second vice-president, D. F. Heuer, and secretary-treasurer, J. Staley Williford.

The retiring officers submitted their annual reports while a feature of the meeting was the presentation of a handsome silver service to D. F. Heuer who, at this meeting, rounded out his third year of service as secretary-treasurer of the club. This was given to him in recognition of the faithful manner in which he discharged his duties during that long period and he made a very happy speech of acceptance.

Another feature was the address delivered by Dwight M. Armstrong, cashier of the Commercial Savings Bank & Trust Company and chairman of the War Thrift and War Saving Stamp committee for this (Shelby) county in the nation-wide move looking to the participation of the entire civil population of the country in the service of the government in the winning of the war. Although cashier of one of the large banks in Memphis, Mr. Armstrong assured his hearers that the government offered a safer and more remunerative investment to the man who bought these stamps than any bank in Memphis or elsewhere could offer and announced that C. R. Ransom had been selected to head a committee which would bring the purchase of these stamps before members of the club and before their employees.

The club, by unanimous vote, ratified the action of the executive committee with reference to the participation of the club, jointly with the other lumber organizations here, in the banquet to be tendered to all visiting lumbermen in Memphis January 15 to January 18, inclusive, at the Hotel Gayoso Friday evening, January 17, and with reference to exempting all members of the club now in the service of their country from paying dues for the period of the war. Those on the honor roll are: H. D. Allen, Palmer Kellogg, Paul Rush, H. C. Dewey and H. B. Anderson.

Although much opposition developed, resolutions, offered by James E. Stark, chairman of the river and rail committee, were adopted by a large majority in protest against the embargo laid by the Yazoo & Mississippi

Valley Railroad against the cross-town handling of lumber and lumber products in open equipment.

A committee of five is to be named by the president to present these resolutions to the gentleman in question.

J. E. McSweyn, as chairman of the retiring house committee, submitted a report showing: (1) That this committee had, since it was formed some months ago by the merging of several other committees into one, secured employment, through its employment bureau, for 336 men in some branch of lumber or yard or timber or mill work and that it had applications on file from 353 more persons desiring service with lumber firms; and (2) that, through the exchange maintained by the committee, 1,600,000 feet of oak and gum had been bought and sold. He said that the entire expense had been \$107.13 and that, if all the money had been used for employment purposes, the average cost of each man placed would not have been more than 30 cents, and that, if the entire amount had been used in connection with lumber bought and sold, the cost would not have been as much as seven cents per thousand.

Three new members were elected: E. L. Shannon of the Dickson-Shannon Lumber Company, Millington, Tenn.; H. P. Moyer, Memphis manager for the Cyrus C. Shafer Lumber Company, South Bend, Ind., and H. H. Melhorn, Northern Ohio Cooperage & Lumber Company, Parkin, Ark. Six new applications for membership were filed with the committee at this meeting.

The report of the retiring president, Ralph May, showed that 23 new members had been added to the roll during his administration and that there has been a loss of 7 members through death, resignation and suspension, making a net gain of 16 members and bringing the total to 189, the largest in the history of this organization. It also showed the average attendance at the regular meetings during the year to have been 75.

The report of D. F. Heuer, retiring secretary-treasurer, showed the financial condition of the club to be wholesome.

President-elect, J. E. McSweyn, on assuming the chair, again expressed his appreciation of the honor conferred on him and gave the club but a single injunction: "That it grow not weary in well doing in serving the country in every possible way during the present period of national peril." He then announced the standing committees for the year.

Traffic Association Re-elects Officers

James E. Stark, president of the Southern Hardwood Traffic Association; R. J. Jurden, first vice-president, and Frank B. Robertson, second vice-president, succeeded themselves at the annual election held at Memphis Tuesday, January 8. At the same time seven new directors were chosen, as follows: R. J. Hackney, of Brown & Hackney, Inc., Memphis; George Land, traffic manager of the Lamb-Fish Lumber Company, Charleston, Miss.; Elliott Lang, of R. J. Lang, Inc., who has been treasurer during the past year; William Pritchard, of the Pritchard & Wheeler Lumber Company, Memphis; S. H. Swenson, Archer Lumber Company, Helena, Ark., and Walker L. Wellford, general manager of the Chickasaw Cooperage Company, Memphis.

The two nominating committees agreed on the gentlemen in question and, with respect to the officers, it may be stated that they have been honored by being elected to succeed themselves because of the very able and efficient manner in which they have performed their duties during the year just ended.

The treasurer will be elected by the board of directors, while J. H. Townshend, secretary-treasurer, was likewise chosen by the board to succeed himself. He has become an invaluable adjunct of the association through his intelligent and untiring service in behalf of the hardwood lumber industry in all matters pertaining to rates and transportation.

The annual meeting of the association will be held at Memphis January 15, and the following interesting program has been prepared for the occasion:

Address of President James E. Stark.
Report of J. H. Townshend, secretary-treasurer.
Report of Elliott Lang, treasurer.
Address on "Effect of Government Operation of the Railroads on the Hardwood Industry," by J. V. Norman, Louisville, Ky., one of the attorneys of the association.

Discussion of transportation problems involving the following:
1—Abolishment of present transit arrangements on rough materials to permit lumber and other finished products to be shipped over any road.
2—Abrogation of safety appliance act to permit standard equipment to be used in logging service.
3—Bulkheading of lumber and adequate dunnage allowance for shipments in open cars.

The last named subject has been brought prominently to the attention of hardwood lumber interests through the order of the Illinois Central system, now effective, requiring lumber to be bulkheaded when shipments are made in open cars. This bulk-heading is very expensive, and yet it is, under the present orders of the Illinois Central management, compulsory and at the cost of shippers of lumber. The other roads have not yet followed suit.

Northern Manufacturers Getting Ready for Annual

Arrangements are being completed by Secretary O. T. Swan for the annual meeting of the Northern Hemlock and Hardwood Manufacturers' Association which will be held January 25 and 26 at Hotel Pfister, Milwaukee, Wis. This promises to be the most important annual ever held as many new problems incident to the entrance of the United States into the world war are to be taken up. Among the leading topics will be

that of the hancemen's cooperation with the government in its taking over of the railroad systems of the country. Rate and freight matters are of vital interest to the members of the association and the new plan of government operation presents many new perplexing difficulties which are to be thoroughly threshed out at the meeting.

Other important subjects will be the eight hour law for lumber manufacturing establishments, the three per cent war tax on lumber shipments and the recently promulgated new grades on select No. 3 hemlock and box and crating hemlock. This latter subject has had the attention of the bureau of grades and the Bureau of Statistics and Educational Information for several months and was also discussed at the last quarterly meeting of the association in October. Chief Inspector W. H. McDonald of the association, who prepared the basic rules, has made a number of special tests to determine just what classes of material should properly fall within each grade. Accordingly final action is to be taken on the proposed grades and they will then be ready for official publication by the bureau of grades.

The usual annual reports will be given at the meeting including those of the heads of the four principal bureaus as follows: Transportation and legislation, A. L. Osborn, Oshkosh; grades, George Chapman, Stanley; statistics and educational information, H. H. Butts, Park Falls; promotion, M. P. McCullough, Park Falls. Secretary Swan in his annual report will cover all work not reviewed by the bureau chairmen. A banquet will be given Friday evening.

The association has filed a complaint on behalf of the J. S. Stearns Lumber Company, Odanah, Wis., with the Wisconsin Railroad Commission alleging unreasonable transportation charges on eight carloads of lumber from Odanah to Chilton for which reparation is asked to the extent of \$190.78.

Michigan Forest Fire Affairs

At a meeting of the forest fire committee of the Michigan Hardwood Manufacturers' Association held in Lansing, December 12, 1917, an agreement was reached with the Public Domain Commission to take over the patrol work carried on by the association during the past five years. This will mean a reduction in rate per acre for the coming season, and the matter of rate per acre will be decided at the first meeting of the association which will be held soon.

The agreement reached between the committee and the Public Domain Commission is as follows: The Public Domain Commission will pay salaries and traveling expense of rangers, issue a special commission to Chief Warden J. Lee Morford, and all rangers patrolling territory where the association's members own timber will furnish reports of work accomplished by Mr. Morford at the Gaylord office. Detailed reports of work done on the range will be furnished quarterly, and a copy mailed to each member of the association.

Michigan Meeting Scheduled for This Month

Secretary J. C. Knox of the Michigan Hardwood Manufacturers' Association announces that the mid-winter meeting will be held at the Hotel Statler, Detroit, Mich., on Wednesday, January 24. At this meeting statistics will be presented covering a large proportion of the lumber cut in Michigan during the past year and estimated figures for 1918. General discussion of the lumber market will hold a prominent place on the program.

There will be a discussion of the feeding of men in the logging camps, a discussion of the new Northern Hardwood Emergency Bureau, and reports of committees.

Northern Loggers to Meet

An important meeting of the Central Wisconsin Loggers' Association is scheduled to take place at Wausau, Wis., January 11, and at that time final plans will be formulated for a general meeting of all logging associations in Wisconsin and northern Michigan. This general meeting will probably be held at Milwaukee some time in February.

Foreign Trade Council to Meet

A call has been issued for the fifth national foreign trade convention to meet February 7, 8 and 9, at Hotel Gibson, Cincinnati. James A. Farwell is chairman of the council and has issued the call. The subject which will have first place in the discussion is, "The part of foreign trade in winning the war."

With the Trade

Mason-Donaldson Starts New Mill

A new plant built to replace the one destroyed by fire at Rhinelander, Wis., has just been put into operation by the Mason-Donaldson Lumber Company of that city. Immediate preparations were made after the destruction of the old mill for the erection of a new one, including new machinery and equipment. The new mill is located on the site of the old one and started cutting on December 24.

The new plant is pronounced one of the best in the North. It is equipped with most modern twelve-inch band and ten-inch horizontal band resaw. It has a capacity of about 40,000 feet of hardwoods for each ten-hour shift, and about 70,000 feet of softwoods. It is the intention to cut night and day this winter, cutting hardwoods almost exclusively. The Mason-

Donaldson Lumber Company has a log supply which will enable the mill to run far into the year 1918. Along in the spring and through the summer the mill will be working on soft woods, including hemlock, pine and tamarack.

With its extensive planing and flooring mill operations at Rhinelander, in addition to the brand new sawmill, the company expects to be in better shape than ever to take care of its large and varied trade, particularly in the specialty of mixed car shipments.

The Mason Donaldson company has built up its business on the basis of enterprise and service, and its way of doing things is typified by the energy with which it attacked the problem of providing new sawmill facilities in a short time.

In Training for Commission

Paul B. Berry, who until a few months ago was traveling in northern territory for Nickey Brothers, Inc., of Memphis, Tenn., writes a very interesting letter from Camp Sevier at Greenville, S. C.:

I have graduated from Camp Sevier, Greenville, S. C., and will on January 3 leave for the officers' training school at Camp Stanley, Leon Springs, Texas. We have a three months' course of training there beginning January 7 and ending April 5.

The fighting end of Uncle Sam's army offers much more excitement than the forestry division, which is my reason for having remained with the infantry. Anyway, there will be plenty of lumber and veneers left to be made when we all return from over seas.

I haven't been back to Memphis since we embarked for Sevier in September. Fact is, I haven't been any farther than Greenville, S. C., so I am more than glad of this opportunity to leave for Texas.

Wishing you a Happy 1918, I am,

Sincerely,

PAUL BERT BERRY.

Company "A,"
120th Infantry, Camp Sevier,
Greenville, S. C., or
c/o Nickey Bros., Memphis, Tenn.

Important Change in Shafer Company

As a natural consequence of its rapidly growing volume of business, the Cyrus C. Shafer Lumber Company of South Bend, Ind., has materially expanded its organization.

George O. Thurn, who after continued service for more than thirteen years with the Studebaker Corporation of South Bend, Ind., and Detroit, Mich., has resigned the position there as lumber purchasing agent and purchased an interest in the expanded Shafer company. He assumed his position as secretary on January 1.

The Studebaker Corporation is a factor of considerable magnitude from the lumber consuming standpoint, and Mr. Thurn has behind him experience in supplying its requirements of 40,000,000 feet of lumber a year. He has accumulated no end of knowledge as to special values in cutting up lumber for use in manufacturing purposes, and his work with the Studebaker Corporation has particularly fitted him for active participation in the lumber business.

At the time the United States entered the war, the wagon and vehicle purchasing committee was authorized and formed, and Mr. Thurn was made chairman of the buying or sub-committee. This committee was formed to assist various wagon manufacturers who had government contracts to locate and obtain the necessary wood stock with which to construct army vehicles. As buyer on the sub-committee he had charge of the dimension stock branch, which in addition to his other duties required his most careful and his keenest application. His services on this committee were much appreciated and his associates unanimously regretted his resignation. As a committee member he is succeeded by H. B. Kimble

of South Bend. B. R. Maxson will fill the vacancy left by Mr. Thurn as lumber purchasing agent for the Studebaker Corporation.

The foundation of Mr. Thurn's career was practically laid from 1899 to 1904, when he held the position of assistant purchasing agent for the Dodge Manufacturing Company of Mishawaka, Ind.

The expansion in the Shafer business also involves the opening of an office at 2161 Railway Exchange building, St. Louis, Mo. W. W. Dings or "Billy" Dings, as he probably is best known, will have charge. Mr. Dings is one of the best known factors in the marketing of hardwood lumber. He has many years of experience behind him and with an unusually keen ability for analysis, his views on marketing and future possibilities will be worth a great deal to the Shafer company. Mr. Dings has a very large following with the consuming trade and has made a splendid record not merely for sales but in behalf of his customers.

Mr. Dings will look after all the interests of the Shafer company in that field. He will cover all of the western part of the country as his sale territory, and will handle the general line of southern hardwoods carried at the yards and mills of the Shafer company.

Col. George M. Paine

Col. George M. Paine, Oshkosh, Wis., president of the Paine Lumber Company, and one of the pioneer manufacturers of that city, passed away Saturday noon, December 29, after a brief illness of general debility. He had been in a critical condition for several weeks at the Lakeside hospital, but up to the time he had been taken ill he not only was in apparently good health but devoted several hours a day to the management of the big sash and door plant of which he was the head, and took his accustomed mile walk each day.

Colonel Paine was eighty-four years of age. He was born November 11, 1833, at Orwell, Bradford county, Pa., being the son of Edward L. and Eleanor Rose Paine. His education was received at Elmira Academy and Alfred Seminary, New York, but he served an apprenticeship of several years and came to Oshkosh with the family in 1855. The father and sons, including Colonel Paine, brought with them the machinery for a sawmill which was erected in this city and which was the nucleus of the present million-dollar establishment. At the beginning the mill had a capacity for the manufacture of 60,000 feet of lumber in twenty-four hours, and for many years thereafter it was the destination of millions of feet of logs cut in the virgin forests of central and northern Wisconsin and rafted down the Wisconsin, Wolf and Fox rivers to this point. The first sawmill as well as its successor burned down, but both were quickly rebuilt by C. N. Paine & Co. Early in its history a planing mill was made a part of the plant and formed an increasingly important factor in the upbuilding of the company. The firm name continued until 1882, when it was succeeded by the Paine Lumber Company, Ltd., incorporated with a capital of \$1,000,000. Charles N. Paine was named as his successor, and so remained up to the time of his death. The other brothers were Nathan Paine, who was a major in the civil war and was killed at the battle of Campbelltown, Ga., and Edward R. Paine, who became a physician and predeceased his brother many years. The father passed away in 1893 at the age of ninety-three years.

The Paine Lumber Company, Ltd., continued to grow under the leadership of Colonel Paine, and is recognized as the largest sash and door factory in the world. When operating at full capacity it employs 3,600 people. Its other officers are vice-president, Nathan Paine; secretary, Edward W. Paine, both sons of the deceased, and treasurer, Charles Nevitt, the latter a son-in-law. The military title accorded Mr. Paine

PAUL B. BERRY, OF MEMPHIS WHO IS IN TRAINING AT CAMP STANLEY, TEXAS .. FOR OFFICERS COMMISSION

THE LATE G. M. PAINE, OSHKOSH

W. W. DINGS WHO OPENS ST. LOUIS OFFICE FOR CYRUS C. SHAFER LUMBER COMPANY

was by virtue of a commission signed by Gov. Alex W. Randall when he was appointed at the head of the Twenty first regiment of the state militia March 10, 1858.

Lumbermen in the Army

Two sons of Clarence R. Mengel of the C. C. Mengel & Bro. Company, Louisville, Ky., are in the army, both holding commissions as Lieutenants. They are Samuel Castelman Mengel and Joseph Torbett Mengel. The former received his commission at Fort Benjamin Harrison and has been assigned to a machine gun company at Camp Zachary Taylor, preparatory to going to France. Lieutenant Joseph Mengel was commissioned at Fort Sheridan in the field artillery and is now at the front. **HARDWOOD RECORD** is pleased to be able to present the photographs of these young officers who are shown on this page. Samuel C. Mengel is at the left and Joseph T. Mengel at the right. They carry with them cordial wishes of the many people with whom they have associated in their social and business life.

Clark-Biller

Vernon L. Clark, who is associated in the ownership of the Des Moines Saw Mill Company, Inc., of Des Moines, Iowa, was married at Des Moines on Saturday, January 5, to Miss Christine Biller, daughter of Mrs. J. Biller of Des Moines. The wedding took place in the Biller home, 1821 Ingersoll avenue.

The service was read by the Rev. S. Medbury, pastor of the University Park Church of Christ at Des Moines. Immediately following the ceremony at ten o'clock breakfast was served, covers being laid for a number of relatives.

Mr. and Mrs. Clark left at noon on Saturday for New York, and will be at home at 1232 Grand avenue, the home of Lieut. and Mrs. Frederick Windsor Hubbell after January 15.

Mr. Clark's bride is a young woman of unusual attainments. She has resided in Des Moines for the past three years, going there with her mother and aunt from Washington, D. C. She was graduated from the

liberal arts department of the University of Indiana, and received her master's degree in English at the University of Iowa.

Mr. Clark is well known in lumbering circles, being a prominent factor in walnut production. The Des Moines Saw Mill Company, Inc., is a well organized concern operating a strictly modern mill and getting out large quantities of walnut.

Mr. Clark is secretary of the association of walnut manufacturers and his influence is important in determining the policies of that organization.

Bonuses by Long-Bell Lumber Company

The Long-Bell Lumber Company, with headquarters at Kansas City, Mo., distributed between \$200,000 and \$300,000 to its employees in the form of bonuses and gifts. Among the company's new year donations was a check sent to each man who has left the service of the company to go into the service of the country. Up to the first of the year these numbered 193.

Prominent New Englanders Pass Away

A. M. Wood, of the A. M. Wood Company, of Charlestown district, Boston, Mass., died recently.

Another large hardwood concern in that district has also suffered the loss of one of its principal members, Harrison Parker, of the Palmer & Parker Company, one of the largest firms in this branch of the trade in New England. He was a popular and familiar figure on the market, having been for nearly sixty years associated with this company, and his passing on, after a lingering illness, while not unexpected, will be keenly felt by his numerous close friends.

Last Year's Railway Finances

The current issue of the Railway Age Gazette publishes an analysis of the revenues and expenses of the railroads of the United States during 1917, in which it is shown that the revenues crossed the four billion dollars mark, which is \$400,000,000 higher than the figures for 1916, which broke the record by many millions. During the same year railway expenses amounted to \$2,800,000,000, which was \$500,000,000 greater than the expenses in 1916, so that the final figure of operating income for the year was reduced by about \$100,000,000.

Southern Pine for Ships

The Southern Pine Association is not disposed to let pass without challenge the charge that it has fallen down in its agreements to supply timber for ships and that it overestimated its ability to furnish what was asked. Through a committee, the pine people have given their side of the controversy, and they charge that any falling down on their part was due to the persistent and frequent changes in quality, size, and quantity of timber called for by the shipping board which would specify one size of timber, and an extraordinary size, and when the pine manufacturers had spent thousands of dollars getting out the stuff, somebody in the shipping board would take a notion in his head that some other size would do better, and a change would be ordered without regard to how much it would cost or inconvenience the lumbermen. These sudden and spasmodic changes in specifications were declared by Senator Martin of Virginia to be due to "unfortunate ignorance." Not a practical southern pine lumberman was consulted in making out the schedule of lumber necessary for each ship. Unusual sizes would be ordered, with certain proportions of heartwood; and after a little while, a change would be made, perhaps to a larger size with still more heartwood. In that way the most strenuous efforts of lumbermen to cut and deliver the timber were defeated. The whole thing was not much different from the muddle in getting guns, due to changes in plans which upset all calculations.

Latest Statistics on 1917 Cut

The National Lumber Manufacturers' Association has just issued a blotter on which is printed the compilation of statistics showing cut and shipments from December 1, 1916, to November 30, 1917.

Below is found a tabulation of the hardwood cut and shipped, the total lumber cut and shipped, the difference being the soft woods cut and shipped:

Months—	—Hardwoods—		— Total —	
	HARDWOODS		TOTAL	
	Cut	Shipped	Cut	Shipped
December, 1916	113.0	119.6	1,085.6	1,235.0
January, 1917	119.1	108.9	1,162.8	1,288.7
February, 1917	122.6	102.3	1,106.5	1,065.2
March, 1917	116.7	102.6	1,180.4	1,108.2
April, 1917	132.8	122.1	1,273.6	1,292.5
May, 1917	127.9	117.6	1,553.2	1,537.8
June, 1917	106.0	111.8	1,499.3	1,581.2
July, 1917	95.7	104.9	1,388.6	1,565.5
August, 1917	94.8	120.6	1,385.9	1,575.8
September, 1917	85.2	110.0	1,297.4	1,247.3
October, 1917	91.7	90.7	1,417.7	1,234.8
November, 1917	66.0	87.2	1,246.5	1,197.4
Totals	1,271.5	1,298.3	15,597.5	15,929.4
Shipped more than cut, softwoods			305,100,000 ft., or 2.1%	
Shipped more than cut, hardwoods			26,800,000 ft., or 2.1%	
Shipped more than cut, total			331,900,000 ft., or 2.1%	

LIEUT. SAMUEL C. MENGEL LIEUT. JOSEPH T. MENGEL

Enters Petition on Minimum Weights

The Northern Hemlock & Hardwood Manufacturers' Association, through its traffic manager, E. M. Ducker, Inc., filed a petition with the Interstate Commerce Commission at Washington, D. C., respecting proposed regulations for the minimum loading capacity of cars with lumber as a special way of effecting a measure. The text of the petition follows:

Your petitioners, the Northern Hemlock & Hardwood Manufacturers' Association, a voluntary unincorporated organization, representing eighty-two lumber manufacturers of the state of Wisconsin and the upper peninsula of Michigan, and as such are vitally interested in any change in rules, rates or regulations affecting the charges for transportation.

Your petitioners represent that there has been filed by E. B. Boyd, as agent for Western Trunk Lines, 15th section Application No. 1993, wherein it is sought to increase the minimum weight on lumber to 40,000 pounds, in all classes of equipment, in Western Trunk Line territory. That the present minimums are 30,000 pounds for cars under thirty-six feet in length and 34,000 pounds for cars thirty-six feet and over in length.

Your petitioners further represent that the lumber operators in this territory are making every effort in the furtherance of car efficiency and conservation of equipment, thus vying with each other to utilize every available foot of loading space and will continue to do so.

Therefore your petitioners are not at this time offering objections to the general proposition of increased minimum weights on lumber, but feel that the plan as suggested by carriers should be subject to such modifications as will adequately protect the interests of shippers and at the same time bring about the utilization of equipment to the fullest possible extent.

Your petitioners therefore do not offer objection to changes made in conformity with the following plans:

A minimum of 40,000 pounds to apply to ships in shipments in cars 36 feet and longer, subject to the following:

(1) That where cars are loaded to full visible capacity, actual net weights will govern without regard to the minimum.

(2) Where a car of the character ordered by shipper can not be furnished and for convenience of the carriers a car of different character is furnished, the car so furnished may be used on the basis of the minimum weight applicable to car ordered, or on basis of actual weight of shipment in greater than such minimum.

On cars under 36 feet in length your petitioners offer no objection to a minimum of 34,000 pounds, subject to rule covering cars when loaded to full visible capacity.

If therefore it seems expedient to the commission that change in minimum weights applicable to lumber be made at this time, we respectfully urge that such steps be taken in the promulgation of such changed minimums that the interests of shippers be properly protected.

Traffic Affairs

Traffic notes from Washington include the following notes of interest among others:

Priority Director Robert S. Lovett not long ago issued an order giving priority of shipment to materials for cantonment construction, including lumber, but since then has suspended indefinitely all priority orders. This action was taken after a conference between Judge Lovett and Secretary of the Treasury McAdoo, in order to permit fuel shipments to be rushed ahead of everything, including passengers.

The eastern commodities case involving 15 per cent rate increases on certain lumber and other goods shipped throughout the East has been suspended until June 30.

The commission has dismissed the complaint of D. C. Stimson et al. against Louisville, Henderson & St. Louis Ry., involving rates on lumber from Owensboro, Ky., to New York and Brooklyn and Philadelphia. The commission said the rates were not shown to have been or to be unreasonable or unduly prejudicial.

The commission has assigned for hearing February 11 before Examiner Gibson at Tampa, Fla., Fifteenth Section Application No. 2246 by G. K. Caldwell, chairman of the southeastern carriers' committee and coastwise steamship connections, in conjunction with the pending Southeastern Rate Adjustment case. The application seeks approval to file revised rates from Ohio and Mississippi river crossings and related points, eastern cities, interior eastern points, and from Buffalo-Pittsburgh territory to points in the Southeast and Mississippi valley on furniture material, naval stores, woodenware and other articles. The railroad people say that the proposed revision is part of the general revision required by the commission's order requiring adjustment of southeastern violations of the long and short haul law.

The commission has ordered decrease from 500 to 200 pounds in the allowance for weight of standards, strips and supports on c. l. shipments of lumber or logs on flat or gondola cars, provided in certain cases in connection with Cincinnati, New Orleans & Texas Pacific and Southern railways.

Cancellation of the l. c. l. ratings on box, shoos and ends, egg case material, wooden hoops, rough and dressed lumber, and hoop poles provided in note 65 of exceptions, pages 407, 408 and 409 of I. C. C. No. 22 (Southern Classification No. 43) ratings in classification proper thereafter to apply, to establish a uniform application rating over the entire Nashville, Chattanooga & St. Louis Ry.

File Exceptions to Reclassification Report

In view of the hearing scheduled at Washington January 18 in the lumber reclassification case, the commission is receiving many briefs and exceptions to Examiner Esch's tentative report on the question from parties interested in the subject, especially railroads and lumbermen. Lumber manufacturers, other firms in the business, trade associations, box men and railroads take exception to the examiner's suggestions. William A. Wimbish has filed a brief for the National Lumber Manufacturers' Association, Northern Hemlock & Hardwood Manufacturers' Association, Hardwood Manufacturers' Association of the United States, Michigan Hardwood Manufacturers' Association, Western Carolina Lumber & Timber Association, Southern Cypress Manufacturers' Association, Southern Pine Association, Georgia-Florida Sawmill Association, North Carolina Pine Manufacturers' Association, and Northern Pine Manufacturers' Association.

Hal H. Smith, as attorney for the Strable Lumber Company, Nichols & Cox Lumber Company, William Horner, and other users of transit privileges, has filed exceptions to the report. Mr. Smith objects especially

to the proposition that uniform transit provisions should be adopted by all carriers. He characterizes this provision as illogical and confusing.

Jeffery and Campbell and F. C. Gifford have filed a communication with the commission in behalf of the box manufacturers' association, excepting to Examiner Esch's findings that crate and box material and the raw material from which shoos are manufactured should be given the lumber rate; that the carload minima should depend upon the size of cars; that a basis of 15 pounds per cubic foot is taken for revenue at the minimum base rates; that a sliding scale of minima is proposed based upon 45,000 pounds as 100 per cent as applied to box shoos and their raw material.

The box people suggest that no further action should be taken by the commission until after the war and commercial conditions throughout the world have been readjusted to a more normal basis.

Exceptions have also been filed to Mr. Esch's tentative report in its various features by attorneys representing the southwestern lines, Southern Pacific and Western Pacific railroads, western trunk lines, Official classification lines, Santa Fe and other western and transcontinental lines.

Chicago's Lumber Trade

Chicago's lumber trade has not suffered on account of the war, at least not in quantity of lumber handled. Figures for 1917 show that receipts were greater than those of any former year. About one-twelfth of all the lumber sawed in the United States in 1917 was shipped to Chicago. The people of the whole United States use about 400 feet of lumber per year each, but the people of Chicago use about 600 feet each. They received during the year 3,349,000,000 feet, reshipped 1,485,000,000 feet. The receipts in 1916 were 3,017,000,000 feet and reshipments 1,393,000,000.

Decision in Michigan Percentage Cases

The Interstate Commerce Commission has handed down its decision in what is known as the "Michigan Percentage Cases" concerning rates in manufactures of wood. The opinion by the commission gives a history of the case and the findings in a report of nearly sixty pages. Practically all the railroads doing business in Michigan are mentioned as defendants.

The defendants are required to cancel present rates by February 15, and are obliged to maintain rates to New York City and points taking the same rate not in excess of those based on prescribed percentages of corresponding rates between Chicago and those points and to maintain proportionate rates to all trunk line and eastern trunk line territory.

Hardwood News Notes

< MISCELLANEOUS >

The Benoist Aeroplane Company, Sandusky, O., has assigned.

The Tinsman Lumber Company has completed a new hardwood mill at Tinsman, Ark., to have a daily output of 35,000 feet.

Bliss & Van Auken, Saginaw, Mich., are rebuilding their flooring factory, which was burned some months ago, and will have a considerably improved and enlarged plant.

The Western Planing Mill Company, of Wichita, Kan., has changed its name to the United Millwork Company.

The Pelican Lumber Company of Mound, La., reports that it recently suffered a fire loss.

John A. Smith, president-treasurer of the Smith Sash & Door Company, Rochester, N. Y., died recently.

The Slidell Shipbuilding Company, Slidell, La., has been reorganized as the Louisiana Shipbuilding Company.

The death is announced of Charles Crabbe of the Charles Crabbe Company, Rockaway Beach, N. Y.

Jacob Goldman & Sons (Inc.), have filed an involuntary petition in bankruptcy at Brooklyn, N. Y.

At Sylvia, N. C., the National Products Corporation has been incorporated at \$150,000 and will manufacture furniture.

The Wootex Manufacturing Company is a recently incorporated concern at Michigan City, Ind., to engage in the manufacture of furniture.

The Carrier Lumber & Manufacturing Company, Sardis, Miss., had a fire recently, at its plant.

An involuntary petition in bankruptcy has been filed by the Scarritt-Cornstock Furniture Company of St. Louis, Mo.

Capitalized at \$25,000, the William Huke Rattan & Willoware Manufacturing Company is engaging in business at St. Louis, Mo.

The Detroit Furniture Manufacturing Company, Detroit, Mich., suffered a fire loss recently.

The Mitchell Eastern Parquetry Corporation, Brooklyn, N. Y., has been incorporated.

< CHICAGO >

HARDWOOD RECORD has been favored with attractive calendars from the following concerns: George C. Brown & Co., Memphis, Tenn.; Wood-Mosaic Company, Inc., Louisville, Ky.; John M. Woods & Co., East Cambridge, Mass.; Bellgrade Lumber Company, Memphis, Tenn.; Welsh

Lumber Company, Memphis, Tenn.; the General Electric Company, Schenectady, N. Y., and the Miller Lumber Company, Marianna, Ark.

W. D. Stewart has been appointed receiver for the Independent Harvester Company, Plano, Ill.

The Charles T. Wilt Company Incorporated at \$49,000, has succeeded the business of Charles T. Wilt Estate, Chicago.

The Curtis Brothers Handle Company has been incorporated locally with a capital of \$1,000,000.

The Harms Manufacturing Company and Hoffberg Hyman, both of Chicago, have filed involuntary petitions in bankruptcy.

With a \$10,000 capital, the National Phonograph Company has been incorporated to do business in Chicago.

C. B. Allen of the Allen-Eaton Panel Company, Memphis, Tenn., was in Chicago for a short time this week on a business visit.

R. L. Jurden of Penrod, Jurden & McCowen, Memphis, Tenn., was one of the distinguished southern visitors in the city during the past week. Mr. Jurden is very busy these days on association matters having to do with seeing that Uncle Sam gets his necessary supplies of hardwoods and veneers.

The Lincoln Porter Manufacturing Company, Sterling, Ill., has sold out to the E. L. Reed Manufacturing Company.

I. R. Garretson, until recently lumber agent of the Chicago and Eastern Illinois Railway, left that position January 1, 1918, to join the organization of the Marsh & Truman Lumber Company, Chicago, as traffic manager. Mr. Garretson succeeds Capt. A. Fletcher Marsh and E. L. Bronez who have entered the U. S. army.

On December 30, 1917, occurred the death of Arthur Nollau, president of Nollau & Wolf Manufacturing Company, Chicago, and member of the Lumbermen's Association of Chicago. Funeral services were held January 2, from his late residence, 606 Arlington Place.

The war service committee of the veneer and panel industry held a meeting here this week attended by D. E. Kline, Ralph Jurden, Chairman Lord, Howard Young and A. E. Gorham.

Tom Christian of the Wood-Mosaic Company, Inc., New Albany, Ind., was in Chicago this week. He reported his plant running full tilt and very busy on walnut gunstock business both for home and foreign shipment. He says his company has splendid demand for government materials of all kinds, and is very much pleased with the outlook for the year's business. However, he says, the commercial demand, owing to the lack of cars, has necessitated confining efforts almost entirely to government business because of need of the stock and the fact that the interior business hasn't been very active. In fact, it never is at this time of the year. He reports good poplar back to the old prices in its heyday with the automobile trade, and a really good demand for both upper and lower grades for the butter box trade.

Max Pease of the Galloway-Pease Company, Poplar Bluff, Mo., and Saginaw, Mich., says: "If Uncle Sam needs my services about half the time, I am his huckleberry now until we get some relief on the car shortage proposition. We don't think the commercial trade so good as it might be. The fact that we can't deliver the stuff puts us in an uncomfortable position and we haven't the effrontery to solicit business. Of course, it is my opinion that the government's handling the railroads will relieve the situation materially one of these days, and then we will all get busy. We have had a scarcity of logs due to the car shortage, but we have a good stock of firsts and seconds quartered oak and can take care of some government lumber business."

L. W. Crow of the Mears-Slayton Lumber Company, city, will leave in a few days for Washington, where he expects to represent the Lumbermen's Association of Chicago, and see if it isn't possible to relieve Chicago of 300,000,000 feet of dry lumber on hand suitable for government contracts. It is believed that Chicago's locality, splendid facilities, added to its wonderful dry stocks on hand, will begin to get orders from Uncle Sam.

Walter Burke in speaking about new things around the Lamb-Fish Lumber Company plant at Charleston, Miss., said that the new distillation plant which will turn slabs and waste, stumps and limbs from cut-over lands into alcohol, charcoal and other by-products, will be built this spring. The machinery is on the way and the location is selected. This plant will no doubt be in full operation by the first of April. He says: "We are also building a new hotel at Charleston to take care of the increased number of travelers as well as the employees of this big operation."

I know this is the proposed "still" George Land has been fussing around with in the boiler room.

J. N. Penrod of the Penrod Walnut & Veneer Company, Kansas City, Mo., was in Chicago the other day and left on the tail end of that greatest snow storm on earth on Sunday night. Afterwards he came back and is now at Washington, D. C. He has had large contracts for walnut for government use and has had a mighty busy year in 1917 getting out this material. And in summing up the situation says he believes that 1918 will also be a busy year. Of course, nowadays it's a good deal harder to gather up walnut and put it into merchantable condition for Uncle Sam, but the Penrod company has had a large volume of this business because it has been for several years a big exporter for the Allies, and therefore in filling the contract for Uncle Sam it feels right at home.

W. E. Delaney of the Kentucky Lumber Company, Lexington, Ky., was a Chicago visitor during the holiday season.

Charles Worcester of the C. H. Worcester Company, Chicago, and a member of the war board, spent the holidays in Chicago and returned to

FOR SALE HUNTSVILLE LUMBER COMPANY

S. S. FLETCHER, Trustee, DECATUR, ALA.

All machinery and equipment, belts, pulleys, etc.; 7 ft. Clark Band Mill; 5 Boilers; engines, dry kilns; also hardwood flooring plant. Will sell as a whole or separately. For full list of machinery and prices, apply S. S. Fletcher, Trustee, Decatur, Ala.

Join his confreres, R. H. Downman, Charles Edgar, Horace Taylor. Mr. Wisner of Laurel, Miss., will return ready to take up more actively the work this new year than they have ever done before.

E. L. Edwards of the E. L. Edwards Lumber Company, Dayton, O., visited Chicago the last part of December and was as busy as a bumblebee. He reports having a nice volume of business both on government work and other lines. He was enthusiastic about the amount of business secured if he could only get a car now and then.

W. N. Kelley of the Walter N. Kelley Company, Detroit, Mich., spent a day in Chicago during the new year. He reports having a very good business, but naturally during the stock-taking period there wasn't so much doing with the automobile people, although there has been some lumber booked. He says an order for a car or two is coming in every day, but because the automobile trade is uncertain as to what the government is going to do with the industry it is not buying for future use to any great extent, but it wants something quick and it is not a question of price so much as of being on the ground and giving service.

C. A. Goodman of the Sawyer-Goodman Company, Marinette, Wis., spent most of the holidays in and about Chicago. He wasn't playing all the time either. He sold some thick stock he had in his yard, and believes there will be a good demand for 1918.

T. T. Bartelme, formerly a lumberman of Minneapolis, and now in the Red Cross service, returned recently from several months on the Continent, making headquarters at Paris, and is still in the same work living in New York. Mr. Bartelme came home and spent Christmas with his father and mother in Chicago.

W. O. King shortly before Christmas returned from a trip to Washington where he had had some business transactions with the signal service. And he is like most folks who go down there planning to accomplish something in a day or two, and find it generally takes two or three trips and some work in order to accomplish anything with the departments. He really had a patriotic idea because he had the lumber but it took him long enough to get the order so that it really netted him a loss because of their dilly dallying and waste of energy. "Brother King, you are not the only chap that has had some beautiful experiences of the same kind."

MEMPHIS

Brown & Hackney, Inc., have begun operation of their newly acquired mill at Transylvania, La., and they are preparing to keep it going steadily. They are bringing out logs with their own facilities and they are building a line of railway to their timber which will insure a continuous supply of logs at their plant. They have 6,000 acres of timberlands from which to draw, representing the property recently acquired from the Tensas Land & Lumber Company when the mill itself was bought.

J. W. Wheeler & Co., Memphis and Madison, Ark., have had their mill at the latter point closed down during the past two or three weeks for repairs and improvements. These have been about completed and the company will begin operating it again in the near future. C. L. Wheeler and Wm. Pritchard of the Pritchard & Wheeler Lumber Company, are the principal owners of this firm.

John M. Pritchard, who is giving all of his time to the affairs of the Southern Hardwood Emergency Bureau in Washington, spent Christmas day with his family in Memphis. He has already returned to Washington. He will come back to Memphis in time to attend the annuals of the Gum Lumber Manufacturers' Association, the Oak Manufacturers' Association and the Commercial Rotary Gum Association the third week in January. He is officially connected with all of these bodies either as secretary or treasurer or assistant secretary. He will deliver a special address before the Gum Lumber Manufacturers' Association on "War Orders for Hardwood Lumber and Their Effect on the Hardwood Lumber Industry." While here he made it clear that the bureau is not placing orders covering all requirements of the government in the way of hardwood lumber but intimated that plans are being worked out by which this may be accomplished. While here he attended the weekly meeting of the body organized in Memphis among hardwood lumber interests to co-operate with the bureau and with the government.

Maurice H. Welsh, who has been a traveling salesman for the Lamb-Fish Lumber Company at Charleston, Miss., for the past four years, has become associated in similar capacity with the Welsh Lumber Company. He is a brother of T. H. and J. W. Welsh, owners of this firm, and he will participate on an ownership basis. The company is apparently able to take care of all of the immediate Welsh family, so far as the men are concerned. Maurice takes the place made vacant by R. J. Welsh who enlisted some months ago and who is now doing his bit "somewhere in France."

There is no complaint whatever on the score of demand for hardwood lumber in Memphis. All interests admit that there are more orders than can be filled under present conditions and they emphasize, in the same connection, that transportation conditions must necessarily determine the amount of lumber sold. Private industry is taking its full share of the lumber sold here but government orders are steadily increasing. Little information, however, for obvious reasons, is given out in regard to these contracts. Prices are firm all along the line, with every indication of remaining so. There is no excess of southern hardwoods. In fact stocks are generally below normal. Meantime hardwood production is being considerably restricted and the outlook for a substantial increase in output is regarded as anything but encouraging. Hardwood lumber interests generally are in strong position and are able to finance their holdings without difficulty, with the result that there is no pressure to sell and no disposition whatever to make concessions except in behalf of the government.

There is an excellent demand for ash and hickory in dimension stock. All grades and thicknesses are wanted in these two items and many firms are taking this lumber green from the saw. Walnut is coming into increased prominence in this section. One of the big firms here is bidding for whatever is offered and is taking everything it can get. The lower grades of cottonwood and gum continue to be unusually strong because of the unparalleled consumption of these materials in box manufacturing plants. High-grade cottonwood is likewise in good call while the higher grades of gum are moving only fairly well. High-grade sap gum appears to be moving better than high-grade red. Cypress is a ready seller while there is a strong call for thick stock in plain oak. There is a fairly active demand for high-grade quartered white oak. Comparatively little quartered red oak is being offered. High-grade oak veneers are moving in very satisfactory manner and at good prices. Elm appears to be the slowest item on the entire hardwood list.

◀ BUFFALO ▶

The building situation is unsatisfactory and the weather has been responsible for this to a large extent, the zero temperatures being more in evidence than in years. In December the total cost of permits in Buffalo was only \$684,000, as compared with \$1,207,000 in December, 1916, a decline of 43 per cent. The year 1917 showed total building costs of \$10,501,000 for Buffalo, as compared with \$13,137,000 in 1916, a decline of 20 per cent.

The lack of house building in recent months has not been due to any lack of demand, for the city has few vacant houses or apartments, and rents have gone up to an unusually high figure. A large number of new houses could be sold or rented easily if new buildings were to be erected. Real estate men are predicting that a good deal of work will be carried out just as soon as spring starts.

In his annual message to the Legislature Governor Whitman calls attention to the fact that the enlarged Erie Canal, which has lately cost the state \$150,000,000, will be ready for barge navigation and adds that the need of it is much increased by the failure of the railroads to come up to the traffic requirements of the country. He suggests that steps be taken at once to place an adequate fleet on the canal, both for war and commercial purposes. The lumbermen of the state are in more need of transportation facilities than almost any other branch of business, and will not forget that the canal was a great carrier formerly of forest products, and will be again as soon as it is properly equipped.

The plan of the new canal barge has not been worked out yet. It is likely that both wood and steel will be tried, and wood construction will certainly lead if proper timber can be obtained. A movement in favor of the building of vessels has been started, and it has the support of leading commercial bodies, including the Buffalo Chamber of Commerce.

Edwin W. Gerlitz, who has been with T. Sullivan & Co. for the past eight years, severed his connection with that concern on January 1 in order to become associated with the Queen City Engineering Company and the Phoenix Hardware Manufacturing Company. He will be vice-president and sales manager of both concerns, which are located at 49-55 Illinois street.

Herbert Hill, city salesman for the Hugh McLean Lumber Company, and son of Dr. Hill, the city chemist, has joined the Twentieth Engineers' Forestry Regiment for service abroad. The regular sales force of the company is making its annual inspection of the southern mills this month.

M. M. Wall has returned from a several weeks' business and pleasure trip to the South, during which he visited a number of hardwood mills.

The Curtis Machine Company's plant at Jamestown, N. Y., was burned on January 2, with loss of \$40,000, covered by insurance. The company manufactured machinery for furniture factories and had lately been making aeroplane propellers.

◀ PITTSBURGH ▶

The Bradley Lumber Company has lately put in a fine hardwood operation on the Western Maryland railroad in Fulton county, Maryland and another one on the C. & O. railroad at Scarboro, W. Va.

W. A. Wilson & Sons, Wheeling, W. Va., with offices in the Fulton building, this city, are starting to develop a tract of 12,000 acres of hardwood and pine in Wythe and Smyth counties, Virginia, on the N. & W. R. R. They already have two mills in operation on the tract.

The Frampton-Foster Lumber Company has lately established branch offices in Chicago, Cleveland, Detroit and Knoxville.

H. J. Gearhart, aged forty-eight, purchasing agent for the Pressed Steel Car Company of this city, and who had bought probably as much hardwood from Pittsburgh wholesalers during the past few years as any other man in this territory, died at his home, December 29.

The Aberdeen Lumber Company announces that business just now is badly in the dumps, not so much on account of lack of trade as because of no cars for shipment. President Woollett has great faith in the government and its ability to fix up the shipping situation soon.

E. V. Babcock, of the Babcock Lumber Company, is now mayor of Pittsburgh. He has already chosen his cabinet, and for the next few years will "saw wood" instead of sell wood.

◀ BALTIMORE ▶

The new year has started with apparently no changes in the make-up of the hardwood firms doing business here. No new bidders for business have entered the ranks, and none of the old members of the trade have dropped out. As far as can be learned, there is a complete absence of shiftings in the trade, matters proceeding much as they did in 1917. At least one new project involving a hardwood development with Baltimoreans interested is under consideration, but has not yet progressed to a point where details are available or where the transaction may be regarded as complete, unforeseen impediments having arisen and deferred a decision. Most members of the trade continue to do a fair amount of business, although this is of the more immediate sort, no one, apparently, having much ahead.

The machine shop of the American Propeller Manufacturing Company, on East Hamburg street, was partly destroyed by fire on January 1, the damage being estimated at \$50,000. The blaze is thought to have been of incendiary origin, because the company is working on a large order for aeroplane propellers for the United States Government and has also turned out many of these propellers for the allies. The product of the company is in heavy demand at this time, and the fire is therefore especially embarrassing.

Damage estimated at \$70,000 was caused by fire to the planing mill of Otto Duker & Co., President, Fleet and Albemarle streets, on December 27. There were two fires, the first breaking out about 3:40 o'clock and apparently extinguished in a short time. At 5:30 a second blaze was discovered and this gained considerable headway, doing most of the damage. Because of the fact that the firm has been engaged of late in turning out large quantities of tent pegs and other material for the government, it is suspected that incendiarism may be responsible for the first fire, the supposition being that the second was due to a spark or smoldering ember overlooked after the first blaze. As the factory was equipped with automatic sprinklers, no watchman was employed, the sprinklers being regarded as adequate protection. The adjacent sawmill and other departments of the firm, including extensive lumber stocks, were in great danger, but firemen saved the property. The firm occupies about half a city block and does a big business.

There is every prospect that the government will come to the aid of the Bethlehem Steel Company at Sparrows Point, near Baltimore, in the matter of housing facilities to accommodate the great increase in the number of workers at the ship yard that must be provided if the vessel construction program is to go forward on the advanced scale planned. Admiral Bowles, head of the construction department of the Emergency Fleet Corporation, speaking before the Senate committee on commerce December 28, detailed the negotiations between the corporation and the steel company, and stated that the intention was to erect some 1,500 dwellings in the Sparrows Point section for the expected increase in the number of workers, the government to advance the money for this construction, the amount being estimated at \$5,000,000. The Bethlehem Steel Company is to make repayment of three-fourths of the sum in ten years, the corporation taking chances on the rest. The Bethlehem company is to give a first mortgage on the houses and the land to the government; and the latter will fix the rentals, the idea being to make them moderate, so that every inducement will be presented for workers to come here. Large quantities of lumber will be needed for the construction of the houses, and the augmented program of shipbuilding will require much more, even though the vessels built will be of steel. They are to be part of the great merchant fleet planned.

Horatio H. Webster, for years head of the furniture firm of Kilpper, Webster & Co., Baltimore, one of the most prominent in its line at the time of its existence, died of pneumonia December 26 at his home here after an illness of only ten days. Mr. Webster was seventy-six years old and came from New Hampshire fifty years ago.

The sale of the East Lake Lumber Company and the Dare Lumber Company, both New York corporations operating in North Carolina, has been followed by a suit, instituted in the court of common pleas of Baltimore December 20 by Theodore F. von Dorn, a New York attorney, and Col. Frank Weeks, a Philadelphia lumberman, against Julian E. Gittings of Baltimore, for \$100,000 damages for alleged breach of contract. It is declared in the bill of complaint that on February 5, 1915, Mr. Gittings contracted with Mr. von Dorn for the sale of the properties, promising him a commission of \$50,000 if he made the sale. Mr. von Dorn associated with himself Colonel Weeks, and it is averred that through their efforts

the sale was made to George F. Montgomery of New York for \$1,000,000. Mr. Gittings, it is alleged, received a commission of ten per cent, but had no authority to make the contract with Mr. von Dorn.

◀ COLUMBUS ▶

The Doddington Company, lumber dealer and manufacturer of mill-work, gave its regular New Year's reception to customers and friends at the plant, 451 West Broad street, New Year's Day. A luncheon was served. Edwin Spencer, who was on the sales force of the company, has recently been commissioned a second lieutenant and has been assigned to duty at Camp Sherman, Chillicothe, O.

The annual election of officers of the Columbus Builders' and Traders' Exchange was held January 7 at the Exchange building, North High street. The committee on nomination had placed two full tickets in the field. An open house was held following the election. Many lumbermen are affiliated with the exchange.

Papers have been filed with the secretary of state increasing the capital of the C. A. Mauk Lumber Company of Toledo from \$100,000 to \$150,000.

The Gross Lumber Company, Bellevue, O., sustained considerable damage recently by a fire which originated from an open fireplace.

The Bethesda Box Company, Bethesda, O., was totally destroyed by fire recently, entailing a loss of approximately \$10,000.

The Liberty Lumber Company, Columbus, has been organized recently with an authorized capital of \$25,000 and will have its offices in the Joyce-Realty building. E. R. Clarridge is president and treasurer. W. L. Pierce is vice-president and R. E. Smith secretary. The directors in addition to the officers are F. P. Rogers and A. C. Davis.

Fire caused a loss of approximately \$50,000 in the plant of the Cleveland Box Company, West Third street, Cleveland.

The Kirby Callander Company has succeeded the C. F. Callander & Sons Company at Painesville, O.

The Acorn Lumber Company, Columbus, is going out of business. It is one of the oldest concerns of the city.

The Columbus Real Estate and Building Show, which will be held in Columbus beginning January 21, is now an assured success. Spaces in four large halls on the Ohio State Fair Grounds have been reserved by exhibitors. Indications point to a larger show of that character than ever held in the Middle States.

R. W. Horton of the W. M. Ritter Lumber Company reports a quiet time in the hardwood trade during the holidays. Dealers are now anxious to buy if they could be assured of shipping facilities. Prices are well maintained at the levels which prevailed for some time. Retail stocks are not large.

◀ CLEVELAND ▶

Hardwood men of Cleveland are doing their bit toward conservation. At the suggestion of F. T. Pelitch, secretary of the Lumber Club of Cleveland, no Christmas party was held this year. It was estimated this event would cost about \$350, and the lumbermen agreed that it could be better used for the many war relief movements.

George E. Breece, Charleston, W. Va., president of the West Virginia Timber Company, attended the annual meeting of the directors of his company held in Cleveland recently. The directors were told of the precarious transportation conditions that are hampering the hardwood industry, and urged to co-operate to aid the government as far as possible. While here Mr. Breece was the guest of A. G. Webb, vice-president of the company and general manager of the main offices here.

All hardwood dealers in this district, as well as other lumber interests, are contributing to a survey on costs, being compiled under the direction of J. V. O'Brien, secretary of the Cleveland Board of Lumber Dealers, looking to a more concise method of transacting business for the coming year, and to avoid possible errors with the fast and sharp increases in all lumber materials.

◀ INDIANAPOLIS ▶

Milton S. Huey, eighty-one years old, one of the best known lumbermen of Indiana, died at his home in Indianapolis, January 2, following a short illness. Until six years ago Mr. Huey was the president of the Capitol Lumber Company when he retired in favor of his son, Oscar L. Huey. Mr. Huey was born on May 15, 1836, came to Indianapolis from Zionsville, O., in 1853, and excepting for a few years spent at South Bend, Ind., had lived here since that time. Shortly after his arrival in Indianapolis he established a chair factory, and later was connected with the furniture manufacturing firm of Spiegel & Thoms. He later was connected with the lumber firm of Huey-Adams & Johnson, and after his partners had retired from this business, the name was changed to the M. S. Huey Company. He later was connected with the Bee Hive Planing Mill, which was merged into the Capitol Lumber Company. A widow, one son and a daughter survive. The son is Oscar L. Huey, head of the Capitol Lumber Company, one of the largest concerns of its kind in Indianapolis. His daughter is Mrs. William F. Johnson, the wife of the head of the William F. Johnson Lumber Company. Mr. Huey was a Thirty-second degree Mason, being a member of the Scottish and York Rite lodges. He also belonged to the Mystic Shrine. Funeral services were conducted January 4.

Officials of the Showers Bros. Furniture Company of Bloomington,

Ind., announce that the company has orders ahead to keep it in capacity operation for a month.

Certificates of dissolution have been filed by the Indiana Hardwood Company of Gary, Ind., and the Hardwood Lumber Company of Wabash, Ind.

The Indiana state forestry department has been investigating rumors to the effect that Indiana white oak is deteriorating in quality, the complaints having been received from consumers abroad. The department recently issued a statement to the effect that Indiana white oak has been misbranded. Timber has been shipped into this state from other territory and after the timber has been seasoned here, investigation shows that it has been branded as Indiana white oak.

Frederick M. Bachman, prominent Indianapolis business man, and the head of the F. M. Bachman Lumber Company, died in Indianapolis December 26. Mr. Bachman was sixty-eight years old. He was born in Germany, and immigrated to this country in 1865. He lived for a brief time in Louisville, Ky., subsequently establishing a grocery business in Noblesville, Ind. He became a resident of Indianapolis in 1879, buying what still is the largest retail grocery store in the city. In addition to being the head of the lumber company, he was a director of the Fletcher American National Bank, the Fletcher Savings and Trust Company, and the Citizens Gas Company. He was president of the Booth Furniture Company of Peru, Ind., and the Indiana Drop Forging Company. He is survived by a son, Frederick M. Bachman, Jr., and a daughter, Mrs. Herman P. Leiber.

Announcement was made recently by Frank Coss and Frank Day of Greencastle, Ind., of the sale of the Greencastle Kitchen Cabinet Company to James B. Nelson of Indianapolis, and Grafton Johnson of Greencastle, Ind. R. R. Cunningham, who has been sales manager for the company for several months, will act as manager.

The Closson Lumber Company of Logansport, Ind., has been incorporated with a capitalization of \$50,000. Directors are Margaret M. and Card A. Closson, and Arthur Sells.

The capital stock of the D. N. Foster Furniture Company of Fort Wayne, Ind., has been increased from \$100,000 to \$150,000. The company has been in business for fifty years.

The Talge Mahogany Company's plant in Indianapolis recently suffered a loss amounting to \$5,000 when a pit to hold sawdust between the first and second floors caught fire. Most of the damage was caused by water. The loss was covered by insurance.

The Indiana Hardwood Company of Ligonier, Ind., has dissolved as a corporation.

The Simpson Lumber Company, operating yards throughout Illinois and Indiana, has opened a new yard at Poseyville, Ind.

Charles Barnaby, Greencastle, Ind., one of the best known hardwood lumbermen of the state, recently was elected president of the Indiana Manufacturers' Association.

◀ EVANSVILLE ▶

Lumber manufacturers of Evansville and vicinity worked hard in the recent Red Cross drive. Workers in Evansville "went over the top", having secured more than 17,000 memberships.

The monthly meeting of the Evansville Lumbermen's Club was held on January 8. The log and car shortage questions were discussed. The newly elected officers for 1918 were installed. Charles A. Wolfelin said he had his lines out for several new members in nearby towns. Most of the manufacturers and retail dealers in Evansville are already members of the club.

The firm of Veeck & Son, Petersburg, Ind., has been changed to the Petersburg Wagon Works. The new company will make a specialty of rebuilding wagons and vehicles. Later on it will engage in the manufacture of new vehicles.

William Johann, who is in training with the national army at Camp Zachary Taylor at Louisville, Ky., was here for the holidays as the guest of his parents.

The Brown Brothers Lumber Company at Dale, Ind., for some time has been making wagon tool boxes for the federal government, and has still a big lot of work to do for the government.

The plant of the Evansville Veneer Company is being operated on steady time and George O. Worland says that despite the company's inability to get logs because of the car shortage, things look favorable for 1918. The company has been placed on the roll of honor for the Red Cross, every employe of the company having taken out a membership.

Mayor Benjamin Bosse, president of the Globe-Bosse-World Furniture Company and associated with several more large wood consuming factories of Evansville, was inaugurated for his second term on January 7, and will serve for four years more. A good sized boom for the nomination of Mayor Bosse for governor of Indiana on the democratic ticket has been started by his friends over the state. Fred W. Reitz of the Clem Reitz Sons Company and Daniel Wertz of Maley & Wertz are members of the new Evansville city council.

◀ LOUISVILLE ▶

Government control of railroads has been the most prominent topic in Louisville lumber circles within the past few weeks, and while some shippers are a bit opposed to government control or government owner-

Harris, McHenry & Baker Co.
LUMBER AND MILL WORK
 Elmira, N.Y.

November
 9th,
 1915.

Paepcke Leicht Lbr. Co.,
 Chicago,
 Ill.

Gentlemen:-

We are using your Red Gum lumber in the manufacture of our high class interior trim and general planing mill work.

This gum is giving excellent satisfaction, being highly graded, soft texture, good widths, and long lengths, also dry, straight and flat.

Respectfully,
 Harris, McHenry & Baker Co.

Dict.
 REN/AG.

Of course it is true that

Red Gum

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

The inherently superior qualities of Red Gum can be brought out only by proper handling

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

Paepcke Leicht Lumber Company

ship, it is the general opinion that it is about the best thing that could take place under existing conditions, and it is said that things could not possibly be any worse than they have been. As was pointed out at a car shortage hearing in Louisville late in 1916, the carriers have shown conclusively that they couldn't handle the big tonnage situation under the old "dog eat dog" policy, and it was pointed out at that time that it was about time the government stepped in and did a little regulating, which should prove to the benefit of both shippers and carriers. Louisville lumber concerns were forced to turn down many thousands of dollars worth of business and profits during the past eighteen months on account of traffic conditions, and would have stood to make the biggest money in their histories if they could have obtained transportation for all of the business that could have been secured. However, at that the past eighteen months have been big ones for the hardwood trade, and almost everyone has been making money regardless of car shortages, embargoes, labor scarcity and high wages. However, some improvement has already been shown, and cars are easier to obtain than they have been.

That Louisville manufacturers passed through on a high tide of prosperity during the past year was shown in the annual report of the Louisville Clearing House, which went over a billion dollars in 1917 for the first time on record. This big showing was partially due to the placing of Camp Zachary Taylor at Louisville, but more so on account of the large war contracts which are held by a number of lumber companies, wagon manufacturers, box plants, millers and other manufacturers. Louisville reached its stride in taking on war orders during the past year, having been slow in getting started, but clearings of a billion dollars would go to show that the war is not hurting business in Louisville, and the lumber trade has certainly obtained a nice share of the business.

Amended articles of incorporation have been filed by the Churchill-Milton Lumber Company of Louisville, in which the capital stock of the company is increased to \$400,000 and the debt limit to a half million dollars. This company is a Kentucky corporation, although it recently moved its main offices to its big new mill at Greenwood, Miss., and has another mill at Glendora, both featuring the production of gum and hardwoods. The capital stock of the company is divided into 4,000 shares, of which 350 shares are preferred, 6 per cent stock, which can be retired at the option of the board of directors.

A new poplar concern has been incorporated in Louisville as the Dawson Lumber Company, this concern to manufacture beveled siding and handle general hardwoods. The capital of the company is \$30,000, while the officers are John L. Dawson, president and general manager; John L. Kitchen, vice-president, and Robert Dawson, secretary-treasurer. John L.

Dawson for several years has been a representative of the Norman Lumber Company, poplar manufacturers and jobbers; while Robert Dawson has been a traveling agent for the North Vernon Lumber Company of Louisville and North Vernon, Ind. Mr. Kitchen will not be active in the new concern, as he is a member of Vansant, Kitchen & Co. of Ashland, Ky., and devotes his time to that organization. The new company has secured the old plant of the Kentucky Rlm & Shaft Company, and is installing a planer, cut off saw, cross cut, beveling machine and other equipment.

Plans are being worked out by S. R. Rogers, formerly a local lumber inspector, for the incorporation of the Ohio Falls Hardwood Lumber Company, a \$10,000 hardwood jobbing company, which will handle a general line of hardwoods, doing a yarding business in Louisville, according to Mr. Rogers, who will be vice-president and general manager. Robert B. Bledsoe, retired builder, will be president, and W. Sanford, secretary-treasurer. Mr. Rogers has plans for manufacturing some lumber in eastern Kentucky.

According to recent announcement the Louisville Planing Mills Company, is planning to rebuild its plant, which was destroyed early in December by fire at a loss of \$70,000. The plant included a sawmill, veneer plant and planer, the company featuring production of Kentucky and Indiana hardwoods. Olaf Anderson is president of the company.

Heavy snows throughout the mountain district of Kentucky, and heavy ice in all rivers and streams, has held back logging operations materially during the past few weeks, and production is at a very light stage just now. The heavy ice in the Ohio river has caused the loss of a number of barges and towboats, and endangered the holdings of numerous lumber mills operated on the waterfront. The ice is so heavy at many points that mill operators are afraid it will carry out their log rafts, and much river equipment is still in the open, as the big freeze came so suddenly that it could not be placed in safety.

The C. C. Mengel & Bro. Company, mahogany manufacturer of Louisville, operating plants in Africa and South America, with finishing mills at Louisville, has the following to say concerning the condition of the mahogany market: "The mahogany business during 1917 has been exceptionally good and active, due in a great measure to the demand of this government and its allies for mahogany for the manufacture of aeroplane propellers. While it has been difficult to charter tonnage, and enormous freight rates have been asked, some of the provident exploiters purchased steamers, thereby insuring to themselves the necessary facilities in this respect. The outlook for 1918 is bright. Large quantities of higher grade mahogany will be required by the allies. It appears not unlikely that the

buy the

Hoosier Self Feed Rip Saw. This machine has earned thousands of dollars for owners in the manufacture of dimension lumber, crating, etc., because its entirely novel design, resulting in surprising ease of operation and adaptability, makes possible a profit where a loss is often expected in this work. The

Hoosier Self-Feed Rip Saw

has a positive and powerful feed which handles the heaviest material the sawmill takes just as readily as the lightest.

The table, raised and lowered with the crank in front of the machine, is always level—always securely locked.

The Hoosier rips anything up to 6 inches thick and 17 inches wide. It feeds 35, 75, 100 or 150 feet a minute.

Manufactured exclusively by

The SINKER-DAVIS COMPANY
INDIANAPOLIS, INDIANA

This "HOOSIER," the rip saw which makes profitable dimension manufacture and grade refining at the mill possible. Hundreds of users already—you will be another if you will let us tell you all about it—Will you?

furniture manufacturers will make certain parts of aeroplanes for the government, in conjunction with the making of furniture, for which the lower grades of mahogany can be used. In that event there will be, by reason of business activity throughout the land incident to war work, a demand for furniture. Should the war come to an abrupt close, we are still of the opinion that aside from reaction, business will continue good, for the reason that all stocks abroad are depleted and no great quantities on hand with manufacturers of this country. On the whole we are optimistic as to business conditions throughout 1918.

The Louisville, Ky., and Mound City, Ill., plants of the Inman Veneer & Panel Company, Louisville, are being kept busy just now on some sub war contracts for manufacturing twenty-one aeroplane parts, mostly of glued up stocks of mahogany. Harry Inman of this company stated that eight and ten-ply veneers were being used to make this stock substantial, and that orders on hand would keep the company busy at both plants for some time. A similar order has been landed by the Star Piano Company of Richmond, Ind., this concern also manufacturing aeroplane parts for assembling by the manufacturers with the big contracts.

The Chesapeake & Ohio R. R. Company has filed suit in the U. S. district court at Frankfort, Ky., to stop residents of Menifee and Montgomery counties, Kentucky, from cutting timber from 2,000 acres of land owned by the C. & O. on Slate creek. It is alleged that \$4,000 worth of timber has already been cut out, and several clashes have come up between railroad officials and these outlaw lumbermen.

Henry Plicher's Sons, organ manufacturers of Louisville, recently presented every employe with a bonus of an extra week's salary.

An eastern Kentucky manufacturer is going a long way toward solving the unsteady labor problem through offering beginners wages of \$2.25 a day, and a bonus of \$5 for a full month's work, this resulting in common labor losing more than two full days' pay out of the bonus whenever they lay off one day, meaning that it costs a day laborer just \$7.25 to lay off a day.

MacAdams & Son, Hickman, Ky., have just received a judgment for \$5,119 against a St. Louis concern, in a St. Louis court, the Hickman timber buyers in their evidence showing that an agent of the St. Louis house closed a contract for the plaintiffs to furnish a certain quantity of walnut timber on a high market. The market dropped while the plaintiff had a yard full of stock, and the defendant refused to accept the material, stating that the agent had no right to make a binding contract to accept the timber. The courts held that the contract was binding, and gave judgment in favor of plaintiff.

← ARKANSAS →

The lack of cars in which to ship their products continues to be the greatest concern of Arkansas lumber manufacturers. For the most part mills are operating upon full or nearly full schedules, and by this means are providing employment for their men. Stocks are pretty full in some items, but orders are on file to take care of the outputs, if cars could be secured in which shipments could be made. Shipping in all lines, except for government use, has been abnormally light in this section for many days, and will continue so to be for an indefinite period. The taking over of the railroads by the government is expected by some lumbermen to help the situation. All, or practically so, are maintaining cheerful and optimistic dispositions, and are resigned to make the most of the situation. Lumbermen as a class are filled with patriotism, and are willingly making every effort to help the government in its preparations to wage a war of complete victory for democracy.

Quite an important amount of material for government use is now being supplied from the Arkansas forests. In the northern part of the state, buyers are finding and gathering substantial supplies of walnut timber, which is ultimately to be used in the manufacture of airplane propellers, gunstocks, etc. In eastern Arkansas, with Helena as a center, buyers are grabbing up all the straight grained ash that is to be found. The prices paid for these woods are said to be entirely satisfactory to the sellers.

The Amos Martin Handle Company has been organized at Leslie with a capital stock of \$20,000, and will make handles for axes, picks, etc. Mr. Martin, the head of the concern, is well known among the Arkansas handle manufacturers.

The McRae Box Company has recently been organized with a capital stock of \$10,000. It will operate a box plant at McRae and put out crates and boxes principally for use in shipping the strawberry crop of that section. The interested parties are Chas. Chambers, W. B. Beckwith and C. E. Brown, all of McRae.

E. N. Hill of the Anderson Cooperage and Lumber Company, Anderson, Ind., has recently closed a deal at Wynne, Ark., for the purchase of a site on which he proposes to erect a plant for the manufacture of hoops. Mr. Hill expects that the work of erecting the plant will start within the next few weeks.

The Pulaski Cooperage Company of Little Rock is now employing negro women for work in its plant. They are paid \$1.50 and \$2 per day and have proven entirely satisfactory.

American Lumber & Mfg. Co.
PITTSBURGH, PA.

Major Stave Company at Ashdown, have joined the forest regiment for service in France.

Every officer and employe of the Fee-Crayton Hardwood Lumber Company, Dermott, has purchased a membership in the Red Cross, and some of them bought more than one.

The finishing plant of the Mount Olive Stave Company at Batesville was destroyed by fire on the night of December 24. The loss is estimated at \$10,000, partially covered by insurance. About \$2,000 worth of finished material in the plant was also destroyed. More than 200 men employed by the company will be thrown out of work until the plant can be rebuilt. However, new machinery will be ordered at once, and the plant rebuilt with as little delay as possible.

WISCONSIN

E. J. Gillouly, Mellen, Wis., has been commissioned a captain in the Twentieth Engineers (Forestry) and is expected to be in France shortly with a company of 250 men. Other Mellen men who are enlisted in this service are Peter Trojahn, Archie McAllister, Hans Hanson and Archie Meredith.

A son, the first-born, arrived at the home of Pierson Kneeland, treasurer of the Kneeland-McLurg Lumber Company, Phillips, Wis., just before Christmas.

Capt. Leo Schoenhofen, formerly sales manager of the Langlade Lumber Company, Antigo, Wis., and later a member of the Bissell Lumber Company, Marshfield, Wis., has returned from Camp MacArthur, Waco, Tex. Capt. Schoenhofen was honorably discharged for physical disability. At the entrance of the United States into the war he organized a company of infantry in the northern part of Wisconsin and was given command.

Lieut. Carlton Smith, vice-president of the Menasha Woodenware Company, Menasha, Wis., and son of the late Charles A. Smith, founder of the company, has arrived in France, according to word just received by cable. Lieut. Smith was awarded his commission at the second officers' training camp at Fort Sheridan, Ill., on November 15.

Maj. Edward Scofield, former governor of Wisconsin, has entered a sanitarium at Milwaukee to take a long rest. Maj. Scofield's home is in Oconto, Wis., but he has made his residence in Milwaukee for several years.

C. F. Mohr, president of the Mohr Lumber Company, Portage and Tomahawk, Wis., on December 31 celebrated his seventy-second birthday anniversary at his present home in Tomahawk. He still is hale and hearty and is found at his office at the mill every working day.

John W. Clifford, a pioneer logger and lumberman of central Wisconsin, died at his home in Stevens Point, Wis., on December 24, at the age of fifty-eight years. He has been a sufferer from stomach trouble for several months.

Donald J. Murray, Jr., has resigned as superintendent of the Curtis & Yale Company, Wausau, Wis., and on January 1 became associated with J. D. Mylrea in the foundry and machine shop business at Antigo, Wis. He is succeeded by Roscoe B. Young. Mr. Mylrea is secretary of the Langlade Lumber Company, Antigo, and formerly was a leading citizen of Wausau.

Madison, Wis., is looking forward to the construction of from 400 to 500 homes for workmen during 1918, these being the minimum number needed to accommodate the working forces in the industrial plants of the capital city. Two large ordnance plants are being added and several other industries have recently located there, requiring hundreds of additional workmen.

The Mosinee Land, Log and Timber Company, Mosinee, Wis., started its winter cut at the close of December, when the sawmill resumed operation after a suspension of about six weeks, during which repairs were made and the log supply replenished.

The Northern Wood Products Company, Glidden, Wis., is erecting a factory addition, which will be equipped to utilize every bit of material formerly regarded as waste, in the manufacture of toys, knobs, etc.

The Charles W. Fish Lumber Company, Elcho, Birnamwood and Antigo, Wis., has purchased two steam tractors of the creeper type for its logging operations at Elcho and Birnamwood. The three mills will do winter sawing as log supplies become ample for continuous operations.

The Mellen Lumber Company, Mellen, Wis., has undertaken extensive logging operations in the vicinity of Glidden, Wis. Four or five camps are now kept busy maintaining an average input of 2,000,000 feet per month. Most of the hardwood will go to the Northern Wood Products Company, Glidden, and the Paine Lumber Company, Oshkosh, Wis.

The Elk River Land & Lumber Company, Ladysmith, Wis., has been organized by L. C. Streater, Glenn H. Williams and L. E. McGill to operate in Sawyer, Rusk and Price counties, Wis.

The Mandt Wagon Works, Stoughton, Wis., which recently completed twenty new dry kilns, has started work on another battery of twenty kilns to provide much-needed capacity for executing government and private contracts for heavy wagons. The plant is part of the Moline Plow Company group.

The T. F. Pagel Lumber Company, 3001 Fond du Lac avenue, Milwaukee, has taken the contract for furnishing the maple flooring required for the new twelve-story Milwaukee Athletic Club building, being erected at Mason street and Broadway at a cost of \$1,000,000.

The Wisconsin Cabinet & Panel Company, New London, Wis., formerly the Wisconsin Seating Company, and now one of the largest woodworking plants of the Thomas A. Edison Industries, henceforth will furnish all of the box shooks and crating needed by the various Edison phonograph cabinet plants throughout the country. The box factory at New London is receiving considerable new machinery and equipment and the force has been doubled in size for this purpose.

The general store of the Wisconsin Land & Lumber Company, Hermansville, Mich., was almost totally destroyed by fire early on December 29. The loss is estimated at \$15,000. The big sawmill and maple flooring plant were saved.

The Vesper Wood Manufacturing Company, Vesper, Wis., has been reorganized as the Vesper Silo & Tank Company, and hereafter will devote its entire attention to the business indicated by the new name.

Logging operations are now in full swing in the Dead River district north of Ishpeming, Mich. James D. and B. L. Sherman of Marquette have four large camps and also are employing two jobbers. Next spring the Elg Dead river will be driven for the first time in more than ten years. Timber for four seasons' cut still is available.

The Wolf River Lumber Company, Antigo, Wis., has increased its capital stock from \$25,000 to \$100,000 to accommodate the growth of its business and operations. J. H. Worden is president.

The Charles Jurack Pattern Works, 199-201 Oregon street, Milwaukee, were badly damaged by fire recently. Lumber laid across the top of a furnace to dry was ignited. The loss is estimated at \$3,000. The Leigh Banana Crate Company, occupying the same building, sustained a loss of \$500.

The W. S. Seaman Company, 480 Virginia street, Milwaukee, has increased its capital stock from \$50,000 to \$150,000. The company manufactures high-grade closed automobile bodies, telephone booths and other hardwood products and recently was obliged to open a branch plant at 233-257 Clinton street to provide additional facilities.

The Bissell Lumber Company, Marshfield, Wis., expects to more than double its input of logs this winter, compared with a year ago. The camp at Withee is prepared to cut 3,500,000 feet, against 1,500,000 feet last season. The sawmill will start March 1. Already 500,000 to 750,000 feet of logs are on skids and hauling is under way.

Gustave Kaye, whose fancy woodwork plant at Grand Rapids, Wis., was destroyed by fire recently, has decided to relocate at Green Bay, Wis., where a suitable building with equipment has been provided by local interests seeking new industries.

Rieboldt & Wolter, Sturgeon Bay, Wis., builders of wooden ships, have given an option on their yards and plant to eastern capitalists, who propose to organize a \$1,500,000 corporation and take over the property about February 1. A 267-foot steamer is now on the stocks and will be launched April 15 or May 1. The eastern interests intend to greatly enlarge the yards and working force, having extensive contracts in sight to keep the plant busy for a long time forward.

The sawmill of the Holt Lumber Company, Oconto, Wis., was damaged about \$7,500 by fire recently and was obliged to cease operations. It probably will be a month or six weeks before repairs are completed.

The Wachsmuth Lumber Company's sawmill at Bayfield, Wis., has completed one of the best season's run in years and has suspended operations until spring, while extensive repairs are made. The total cut for the season was about 21,500,000 feet, which is about equal to the shipments from the mill for the season. Most of the consignments were to Chicago and Lake Erie ports, 16,000,000 feet going by water and the remainder by rail. Three logging camps are now engaged in providing about 10,000,000 feet of logs for the 1918 sawing season.

The Sagola Lumber Company, Sagola, Mich., has disposed of its saw and planing mill and real estate to the Sawyer-Goodman Company, Marinette, Wis., which will operate the plant in conjunction with its Wisconsin mills. The Sagola company retains its timberlands, store, boarding house, etc. The Sawyer-Goodman interests contracted with the Sagola mills to cut a considerable quantity of logs when its Marinette mills were closed by labor troubles last summer.

The Fountain-Campbell Lumber Company, Ladysmith, Wis., is operating four camps this winter, three of these being conducted by its jobbers.

The Park Falls Lumber Company, Park Falls, Wis., one of the largest hardwood lumber manufacturers in the North, has completed work on an additional building which will be used for the production of all foodstuffs used by its mill and camp forces. Facilities also are provided for laundry work, harness making and repairs and other needs of its extensive logging and sawing operations. The installation is believed to be one of the most progressive steps yet taken by a lumber company to conform strictly to the federal food administration's rules and regulations.

Secretary O. T. Swan of the Northern Hemlock and Hardwood Manufacturers' Association, has returned from a trip of a few days in Illinois and Iowa. He visited the government arsenal at Rock Island where he observed the manufacture of saddle trees, artillery wheels and targets, an industry that has opened up a wide field for the consumption of northern hardwoods, mostly basswood. Most of this latter wood is produced by members of the Northern Hemlock and Hardwood Manufacturers' Association, although not direct to the government but to the parties supplying the wood under government contract. Mr. Swan also visited his father at Atlantic, Ia., over New Year's day.

Have you seen any better Walnut logs than these?

THEY all grew right in Indiana where hardwoods have always held the choicest farm lands. The best growth of timber as well as the best yield of wheat comes from good soil. The soundness of the log-ends shows that they fed on the fat of the land. My

The Hardwood Market

< CHICAGO >

The blizzard of last Sunday combined with January inventorying have rather tied things up locally. Some Chicago hardwood men have expressed the thought that they are just as well satisfied if offerings of business are not too brisk for a week or so as that would enable them to complete their inventory work and start the slate clean. The consuming trade generally being in much the same position, is not showing a great interest in local hardwood offerings, but even though considerable uncertainty still holds as to what the volume of normal business will be, the conviction still holds that it will be of larger proportions than is generally believed. Chicago is getting its share of war business which class of trade is winning a constantly growing proportion of attention in local hardwood circles.

In the meantime prices are holding remarkably well, some pretty stiff figures having been quoted on many items during the last couple of weeks. There is little likelihood of the local market breaking.

< BUFFALO >

The hardwood trade starts off the year with a fair demand for stock, but with great difficulty in getting lumber from the mills. Lumbermen are hopeful that the control of the railroads by the government will be of advantage in the movement of commercial woods, though they predict that it will be some time before the general run of trade will get the freight service to which it has been accustomed. Embargoes and freight congestion are causing much delay to traffic at present, and it is almost impossible for lumbermen without stocks to deliver promptly to carry on business. Prices are strong.

Outside of hardwoods wanted by concerns with war orders, business would be quiet, but the demand continues fairly active for a number of woods, with thick stock given the usual preference. Oak, maple, ash and hickory are among the woods most in demand. Poplar is doing fairly well. Birch is wanted to quite an extent and some yards are moving a good quantity of beech. Furniture factories are doing little as a general thing, so there is not much demand for mahogany or quartered oak. Low-grades are in excellent demand and the box factories all have numerous orders.

< PITTSBURGH >

The hardwood trade is decidedly up and down in this city at present. Demand from furniture, automobile and glass manufacturers is very light. On the other hand, trade with industrial and manufacturing concerns in general is good especially with those concerns which are building new plants or large additions to their factories. The business in mixed hardwood for mining purposes also promises to be a very strong factor in spring demand. Trade with the yards has not started since the inventory season. Most of them are cleaned out and the chances are that spring business will start pretty early if the weather is favorable. In general, hardwood men had a much better year in 1917 than wholesalers in other lines, so that most of them are not kicking just now.

< BOSTON >

Dealers in the hardwood branch of the trade may be said to have arrived at a state of substantial inability to maintain any standard business. The difficulties which prevail over the whole country are more favorably qualified in some sections and a higher proportion of softwood government usage relieves other divisions of the industry to some extent. But the possibility of bunching conditions of transportation, dry stock available, reasonable prices and a buyer ready to close on uncertainties is becoming more and more unlikely. An improvement in carrying volume is the first requisite, and if that results from the recent assumption of governmental management the dealers anticipate a reasonable flow of business notwithstanding other limitations.

< BALTIMORE >

There has hardly been time since the holidays for the members of the hardwood trade to take a survey of conditions and lay the course for the new year. Many of them have been too busy with stock taking and other matters incidental to the beginning of the year to give much attention to the soliciting of new business; but it is to be said that conditions have not changed in essential respects and are probably more uncertain than before. In addition, transportation troubles are undoubtedly on the increase. Railroads have imposed new embargoes, among the systems being the Seaboard Air Line and the Atlantic Coast Line, which have shut down completely on all freight north of Norfolk and Richmond, beyond which points no shipments can be sent. This will interfere greatly with the hardwood movement, considerable quantities of such woods coming from North Carolina. Furthermore, the almost unprecedented cold has

brought operations at mills and in logging camps to a standstill, or rather, they have not yet been resumed because of climatic conditions. Many activities were brought to a halt by the below zero temperatures, and the production of lumber is certain to be seriously curtailed. Lines that call for the use of lumber are also more or less affected, so that the volume of business offering may be set down as having undergone material curtailment. For such stocks as can be delivered, of course, excellent prices are obtained. The difficulties of transportation alone would suffice to maintain the level of values at high figures, for some wants must be met regardless of what the cost of supplies may be. The tendency of the trade, however, is toward concentration upon war activities, with the government as an increasingly important factor in the market. In some directions the existing state of affairs makes for good business, the high wages earned by persons engaged in war work putting them in a position to spend freely, and the concerns that cater to such wants are in the market for lumber. The auto truck industry, for instance, was never before in such flourishing state. With the railroads curtailing their service and many lines embargoed, transportation is being increasingly taken up by persons with trucks. It is no uncommon thing for shipments by auto truck to be made from Baltimore as far as Philadelphia, the rates being so high as to make the business very attractive. The truck builders, therefore, are among the industries that are deriving big benefits, and their needs in the way of hardwood lumber are accordingly heavy. Many other activities are similarly affected, and it is therefore largely a case of the extent to which shipments are permitted to go out, whether the hardwood men will prosper or not. With reasonably good transportation facilities, the outlook for the hardwoods may be regarded as excellent, though further readjustments will be necessary.

◀ COLUMBUS ▶

The hardwood trade in central Ohio territory has ruled rather quiet during the past week because of semi-annual inventories. Stocks in the hands of retailers are not very large, and it is expected that dealers will be in the market for replenished stocks during January. Generally speaking the tone of the market is fair and future prospects are not considered bad.

One of the worst features of the trade at this time is the inability of railroads to move shipments. Congestion at terminal points and lack of motive power has held up deliveries to a large extent, and consequently prospective purchasers are going slow in placing orders. This applies both to dealers and factories. If the railroad situation is improved under government control, orders will soon be forthcoming in large numbers.

Factories making implements and boxes are good customers. Little buying is being done by furniture factories, as it is the time of the mid-winter shows. Surplus stocks of hardwoods in the hands of manufacturers are not large. Buying for retail purposes is mostly for immediate shipment, or rather when the railroads are able to handle it. Prices are firm all along the line and every change is toward higher levels.

Quartered oak is in fair demand and there is a good demand for plain oak stocks. Poplar is rather strong, especially the lower grades. There is a good demand for ash and basswood. Other hardwoods are unchanged.

◀ CLEVELAND ▶

Tightening of the money market, which is curtailing all building, especially housing construction in the suburbs, and arrival of winter weather, which is causing a drop in other building activities, have combined to reduce business in the hardwood industry in this section. Comparatively, several varieties of hardwoods are a drag on the market, notably maple and oak flooring. That is there is even less demand for these materials than can be met by the limited stocks on hand. In spite of these conditions, every description of hardwood in this market is firm, and there is no sign of a reduction in prices. Only limited offers are noted in any quarter, because under the uncertain transportation conditions holders are not taking chances on their stocks being entirely depleted. There is a better outlet for low grades of hardwoods, for example chestnut and bass, which are being taken by box manufacturers here who have government orders for high-class packages or are supplying boxes to firms that have orders for munitions. Unless there is marked improvement in the car situation, little change in these conditions can be expected in the northern Ohio district this winter. Promise of relief in the car shortage has not developed into fact, and even transits, which were fairly plentiful up to a few weeks ago, now are scarcer and indications are that even these will be cut off.

◀ INDIANAPOLIS ▶

The hardwood market is lagging, and the trade is expecting the customary dull season that generally is experienced at this season. War contracts are more numerous, however, and it is apparent that there is to be a heavier demand for the fulfilling of government contracts from this time on. Many woodworking plants in the central part of the state have been given contracts that will keep them in capacity operation for some time.

Prices are firm, and are tending upward, because of the difficulty in obtaining the stocks wanted. Bad weather has interfered seriously with the movement of cars, but transportation conditions are improving. The

action of the government in taking over the control of the railroads is looked on with favor by the hardwood interests of Indiana.

Building operations are the lightest that they have been for years, and nothing but a light demand for hardwoods is anticipated from the building trades for some time. The total value of operations in Indianapolis for last December was \$85,943, the lowest since the department of buildings was established in 1905. The value of operations for the corresponding period of 1916 was \$527,664. The total value of operations for 1917 was \$7,103,102, compared with \$8,934,694 for 1916.

Retailers are showing little interest in quotations. Yards are fairly well stocked, and no business is expected on a large scale until the arrival of early spring. Little estimating is under way. Furniture industries are fairly busy.

EVANSVILLE

Recent trade with hardwood lumber manufacturers of Evansville and vicinity has been only fair. Several of the large mills have been closed down, being unable to get logs. The log situation has grown serious, but manufacturers are inclined to believe that since the government took over the railroads conditions will improve.

Quartered white oak is in better demand and the prices are stiffening. Plain white oak also continues to pick up. Gum is looking up and ash and hickory continue strong. Elm and maple are moving along in good shape. The better grades of walnut are strong and the poorer grades are beginning to show some signs of improvement. Collections are good. The various wood consuming plants are running on fair time. The box factories are working on war orders, being operated on full time. Furniture factories are doing a fair amount of business. Plow manufacturers report a large volume of trade in 1917. The car shortage has been playing havoc with many of the lumber manufacturers as well as owners of wood consuming plants, and at this writing there is no relief in sight. Building operations for December showed some improvement over the previous month, but little real improvement in building is looked for before the close of the war. Several public buildings are in the course of erection here, but few residences are being built.

LOUISVILLE

There has been very little change in the general demand for hardwood during the month other than that the demand for aeroplane stock has increased, and a number of woodworking concerns are now making certain parts under sub contracts. There is a big demand for walnut and mahogany for aeroplane construction, while the demand for walnut for gunstocks is as big as ever. In aeroplane work a lot of glued up stock or laminated wood is required, and this has resulted in a healthy demand for veneers, etc., some of this laminated wood calling for eight, ten and twelve ply.

Oak has shown some improvement during the month, everything being active except inch common, which is not moving. Ash, in thick wide stock, is showing the same activity that has marked its consumption during the past four or five months, while gum, elm, hickory, poplar and cottonwood are all active. The demand from the cabinet and furniture trades, as well as the manufacturers of pleasure cars, is somewhat off, but truck builders are busy, and there is a big demand for hardwoods to fill all sorts of government orders. Commercial orders have slumped somewhat during the past few days, due to its being the annual stock taking season, but most of the local houses have more commercial orders on hand than they can deliver under present traffic conditions, and are absolutely refusing all long term contracts and much immediate delivery business. The demand is said to be satisfactory, but deliveries have been almost impossible except on government orders, and much stock is being held up pending opening of embargoes or obtaining cars. At the present time most of the mills are down, as there is a shortage of logs, and logs are coming in slowly on account of the snow, labor and traffic conditions. The mills are taking advantage of the opportunity to make the usual mid-winter repairs, and in most cases will resume operations shortly.

MILWAUKEE

The Allis-Chalmers Manufacturing Company, Milwaukee, has decided to continue during 1918 the bonus plan in effect all of last year. About 8,000 employees are affected and the annual distribution amounts to nearly \$750,000.

As nearly ideal conditions for logging as could be desired exist in the northern Wisconsin and upper Michigan timber country, and indications now are that early estimates of the log input this winter will be exceeded to a considerable extent. A heavy snowfall followed a period of extreme cold, during which it was possible to build ice roads, and the movement of logs from camps to the mills already is under way in many districts, providing supplies which will keep the saws busier than expected at this time of the year. An extraordinary effort is being made to make possible a large production of lumber in order to fill the enormous demands for government work, which continue to grow and are expected to keep all mills exceptionally busy for a long time ahead. Every indication is that under existing conditions the production will not suffice to cover all requirements, especially if private demands experience even a decided revival. Prices are firm and the tendency at this time is upward.
